The areal extents and/or surface traces of detected features were marked on the ground with spray paint.

Results

A map of the areas of investigation is presented in Figure 1. Contour maps of the EM-61 differential data are presented in Figure 2.

EM-61

Several significant anomalies were observed in the EM61 data. Most were attributable to buried conduits. No direct evidence of USTs (such as a fillport or UST-like data signature) identified in the vicinity of the anomalies although that does not preclude their existence at this site.

Table 1: EM-61 (metallic) Anomalies

ID	Line	Station	Comment
M-1	20-42	159-187	Conduits/unknown
M-2	26-40	47-67	Unknown
M-3	47-56	5-37	Conduits
M-4	40-103	29-100	Unknown/conduit
M-5	35-45	5-15	Unknown
M-6	30-40	75-87	Unknown

Anomaly M-1

Anomaly M-1 was located along Lines 20 – 42 and between Stations 158 – 187. This area is bound by a building on the west and north sides and by a reinforced concrete slab to the south, and a large asphalt patch to the east. Numerous conduits were identified using EM utility-locating equipment however with exception of the fire suppression line and one additional conduit, most appear to terminate near the center of the anomalous area.

GPR data verified the presence of buried features, however there

was no indication of a UST-like feature present at this location although utilities could not be verified as the sole source.

Anomaly M-2

Anomaly M-2 was located along Lines 26 – 40 and between Stations 47 – 67. This area is situated next to a reinforced concrete pad and vault lids possibly associated with the sump/clarifier feature. Further investigation using EM utility-locating and GPR methods provided no additional information as to a source.

Anomaly M-3

Anomaly M-3 was located along Lines 47 – 56 and between Stations 5 – 37. The eastern extent of this anomaly could not be determined due to the fence however based on a client provided site map the linear feature appears to be associated with a fuel line and fuel pump formerly located adjacent to the east fence.

Further investigation using EM utility-locating and GPR methods also indicated the presence of a linear feature. No physical UST appurtenances were observed nor were UST-like signatures evident within *Anomaly M-3*.

Anomaly M-4

Anomaly M-4 was located along Lines 40 – 103 and between Stations 29 – 100. No single well defined metal detection anomalies could be delineated in this area. The anomalous area is roughly bound by the building to the west and north, and by a conduit trench to the south. Numerous conduits were identified using EM utility-locating instruments within the anomalous area as indicated on *Figure 1*. It could not be determined whether the conduits were the sources for the anomalous area or were merely contributory along with additional unknown sources. The presence of a UST within this area could not be verified or ruled out due to the high number of near surface sources for the anomalous area.

Further investigation using GPR methods also indicated the presence of a multiple linear and non-linear features. Although numerous signatures were evident in the GPR data, no UST-like signatures were defined in the data due to high number of utilities and features buried within the anomalous area.

Anomaly M-5

Anomaly M-5 was located along Lines 35 – 45 and between Stations 5 – 15. Further investigation using EM utility-locating and GPR methods provided no additional information as to a source. No physical UST appurtenances were observed nor were UST-like signatures evident within *Anomaly M-5*.

Anomaly M-6

Anomaly M-6 was located along Lines 30 – 40 and between Stations 75 – 87. Further investigation using EM utility-locating identified a storm drain line that angled southeast-northwest directly through the anomaly however it could not be determined if this utility was a source. GPR methods provided no additional information as to a source. No physical UST appurtenances were observed nor were UST-like signatures evident in data collected within *Anomaly M-6*.

Limitations

EM-61

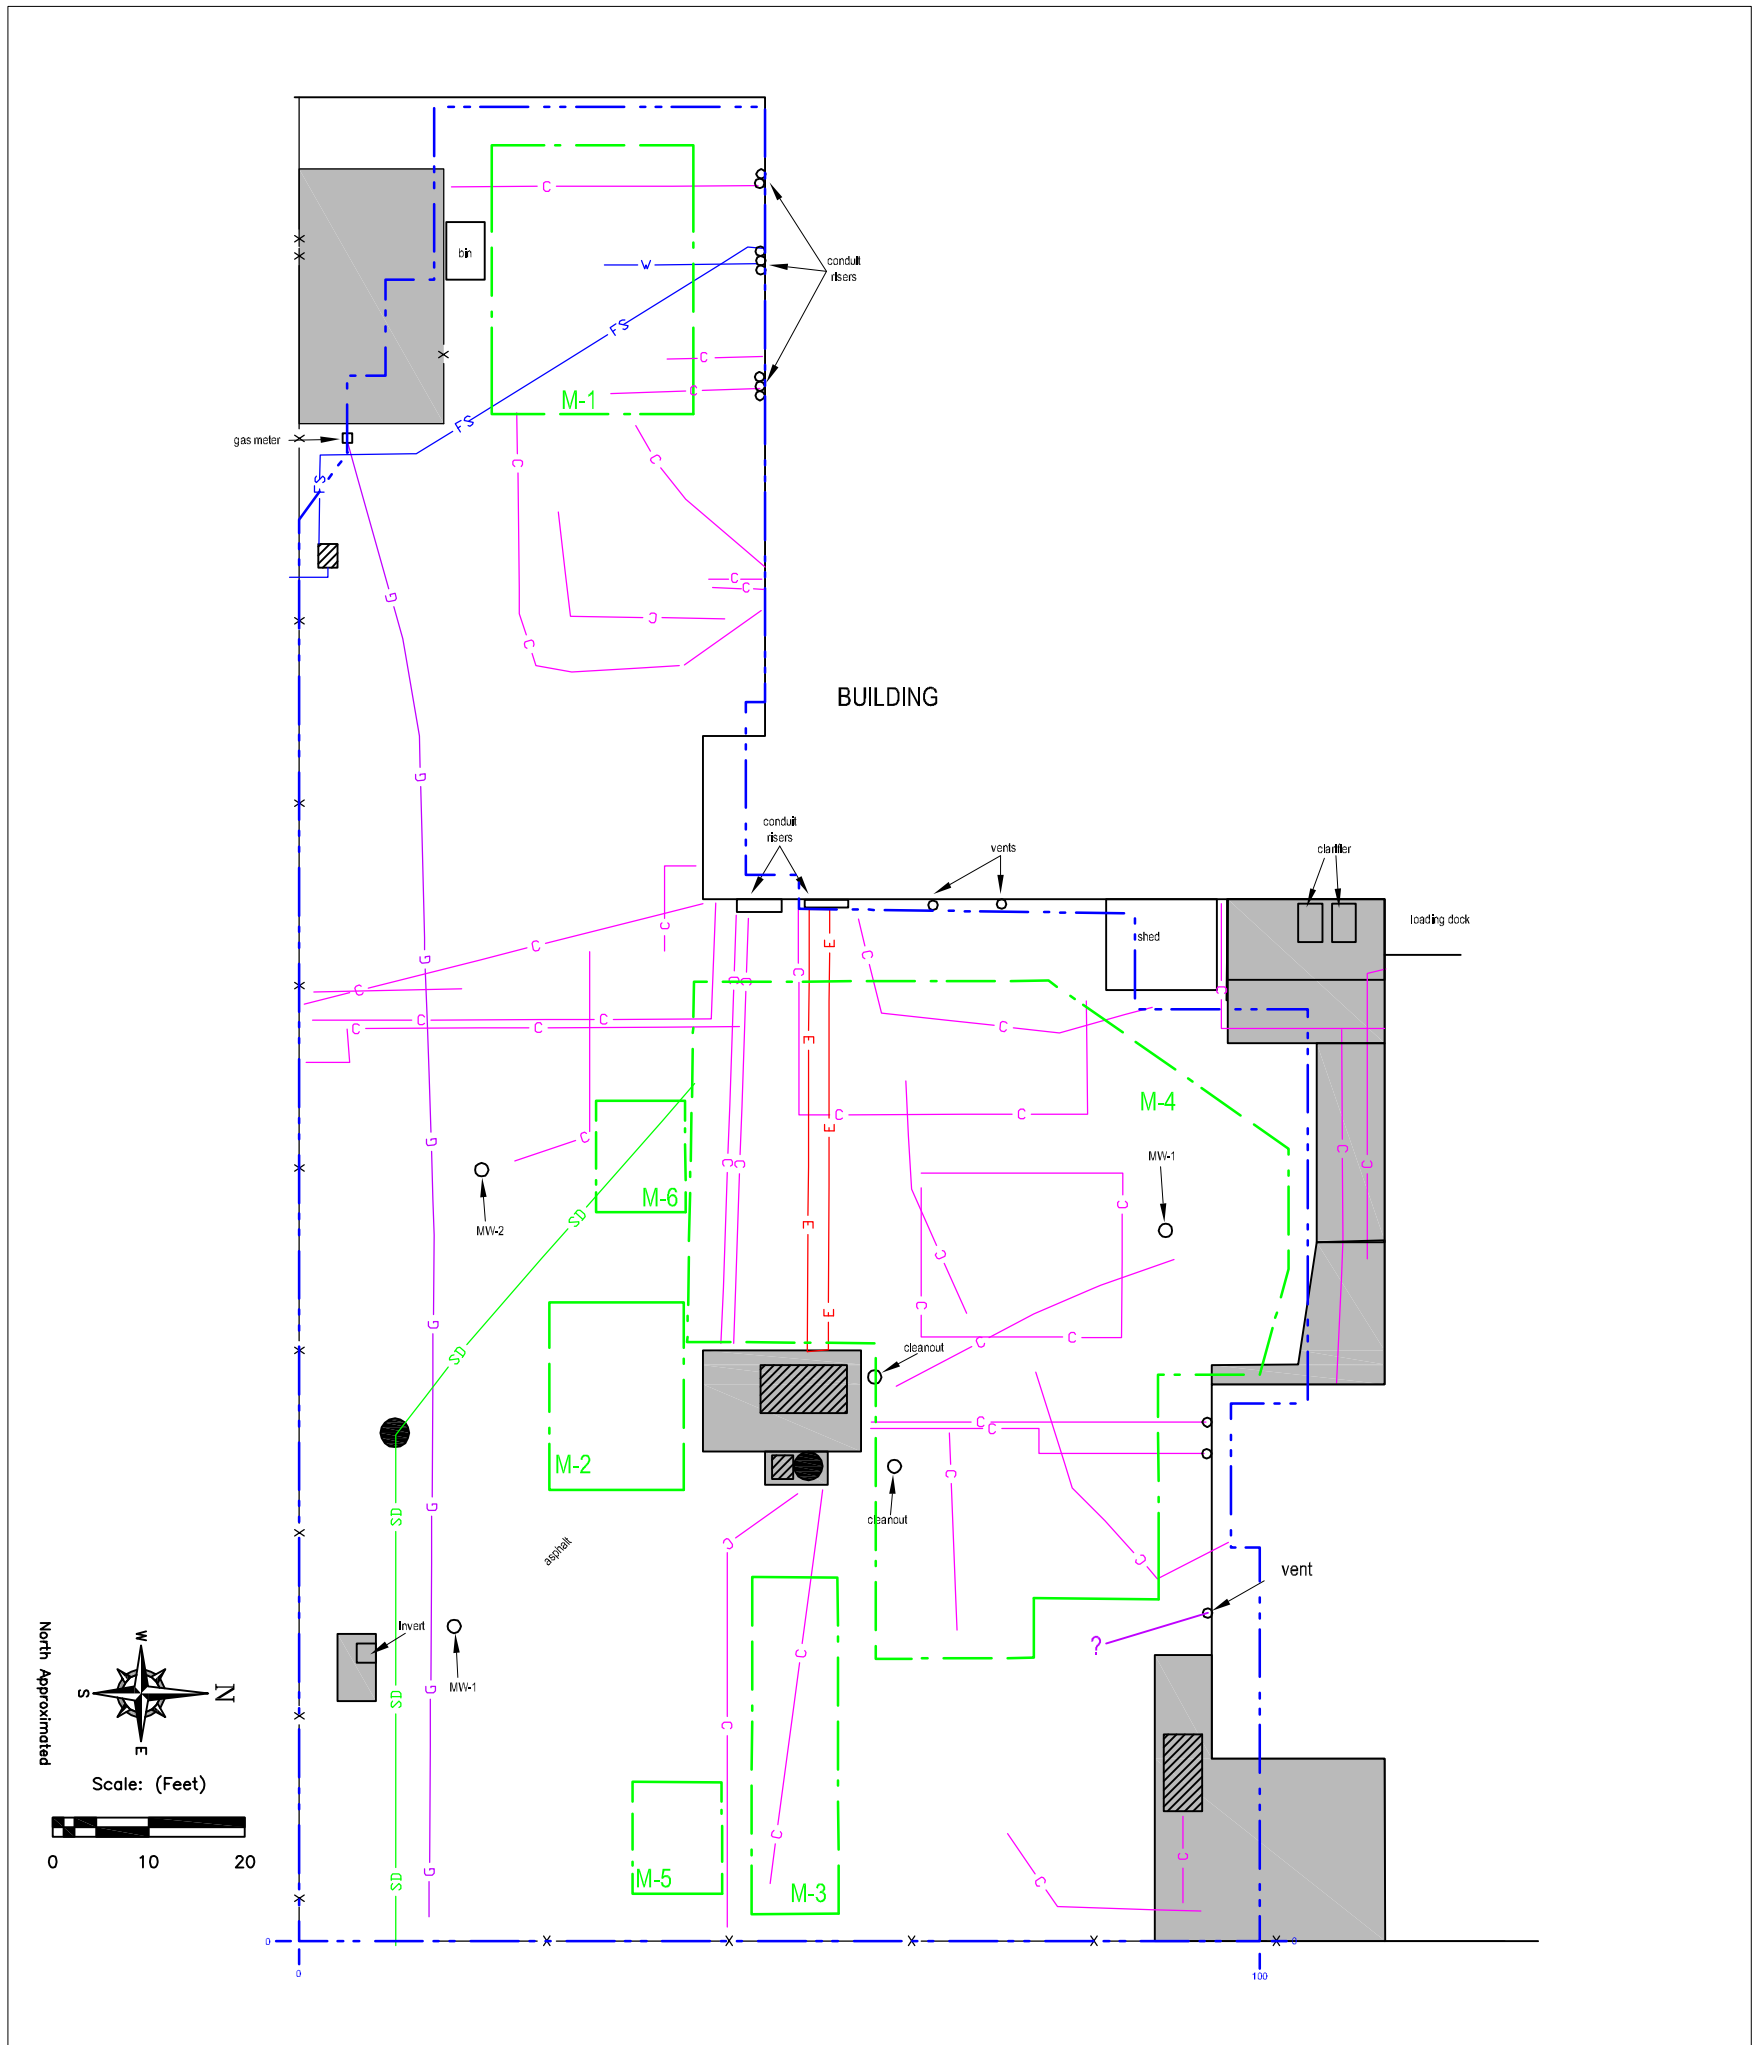

The EM-61 is capable of detecting a 55-gallon drum up to a depth of 3 meters under favorable conditions. We recommend a minimum 10-foot buffer between the survey area and any metallic or metal bearing surface cultural features such as buildings, cars, metal signs, or aboveground piping which could severely compromise the quality of the data. Reliable EM-61 data cannot be collected over areas covered with reinforced concrete.

GPR

The performance capability of GPR is dependent on the soil electrical conductivity at the site. If the soil conductivity is high, attenuation of the radar signal in the soil can severely restrict the maximum penetration depth of the radar signal. Under favorable conditions depth of penetration can be greater than 10 feet, however, average depths of GPR penetration in the West and Southwest tend to range between 3-5 feet. Soils high in clay content and moisture will have higher signal attenuation. GPR surveys should be performed in the dry season if at all possible, especially at sites located in California. Soil moisture, especially in high-clay soils, only increases the radar attenuation rates, further limiting the radar performance.

General

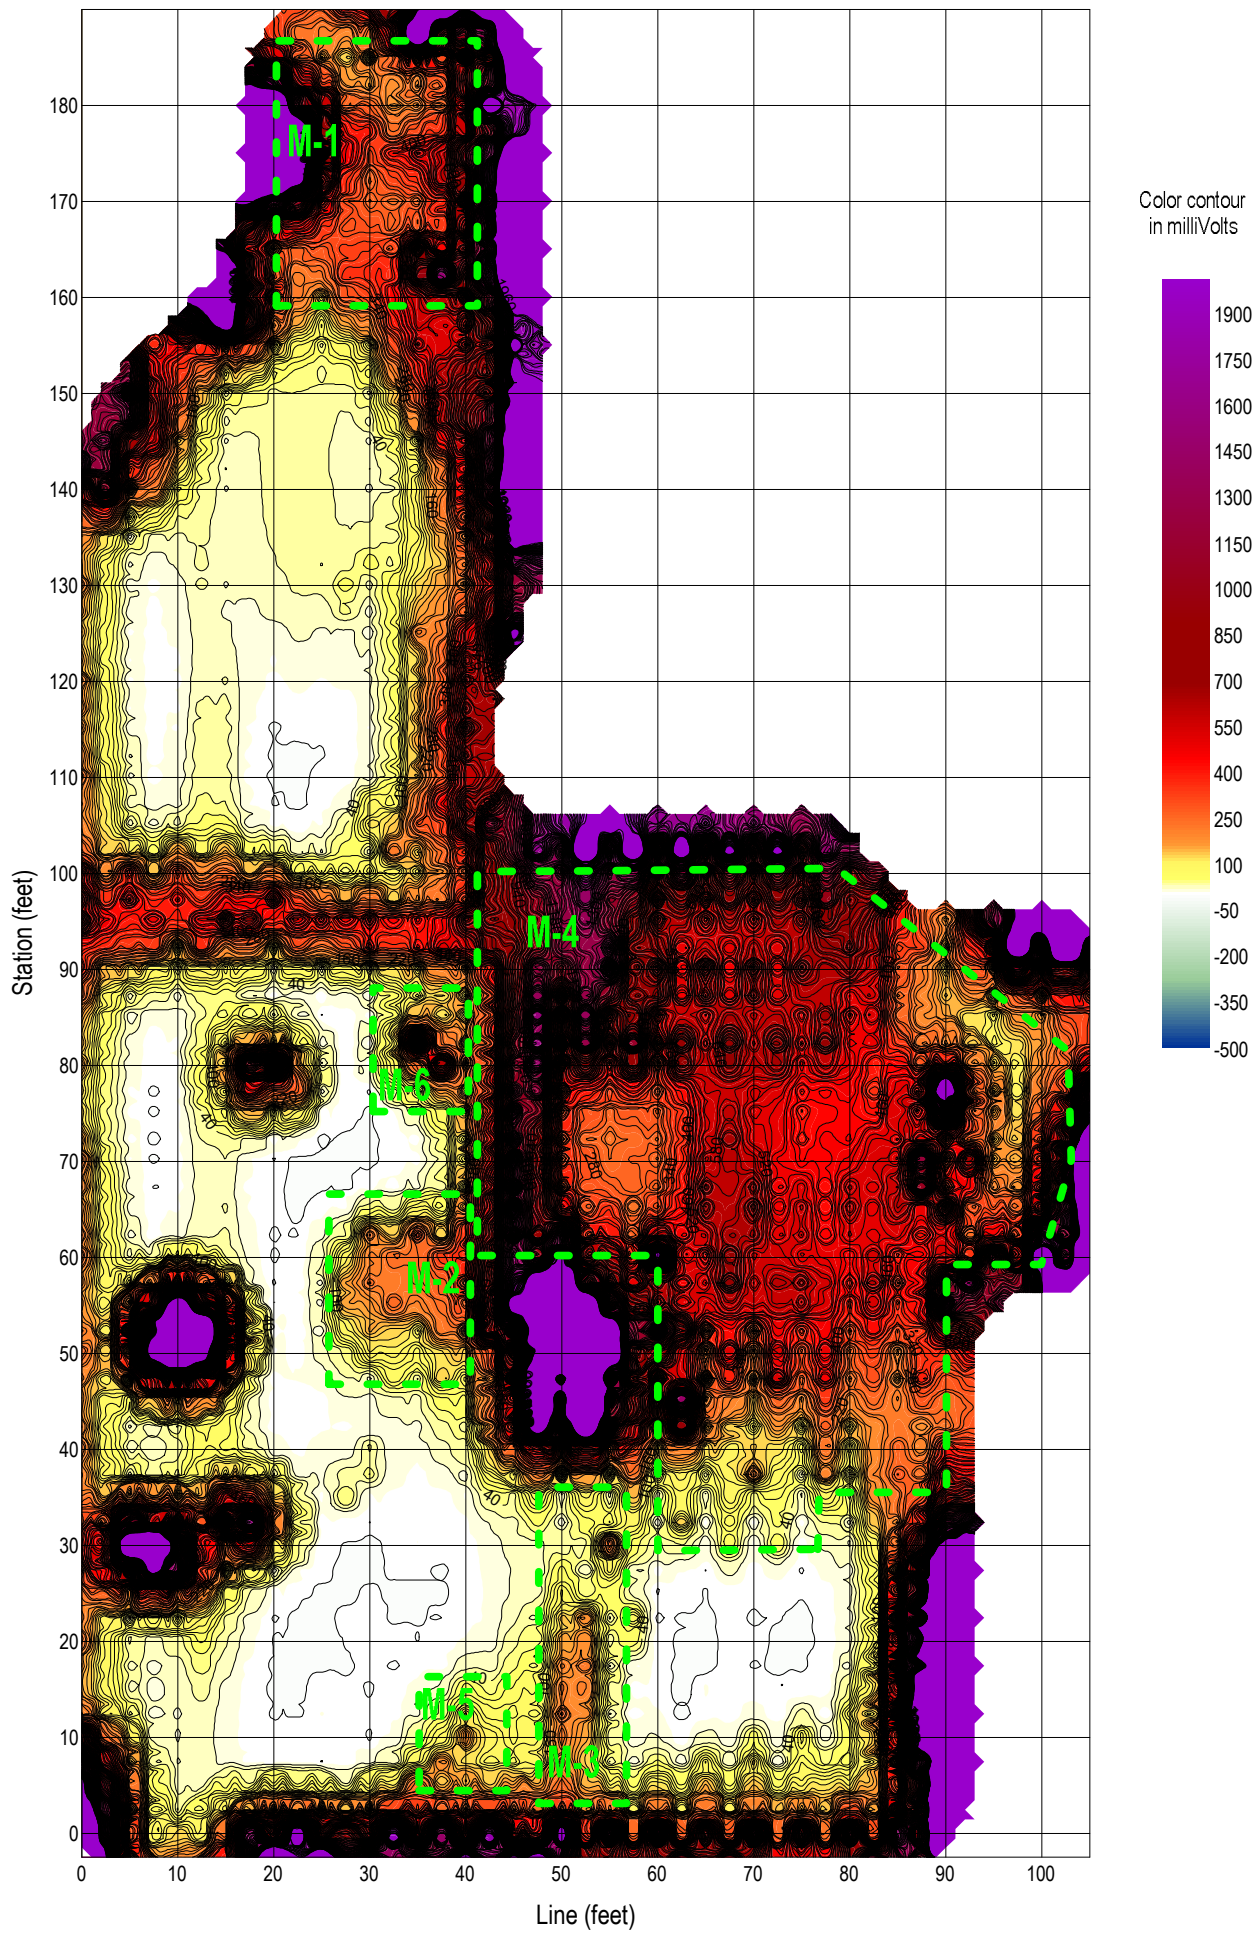

It should be understood that the location of subsurface objects and utilities is dependent upon the recognition of physical phenomena at the ground surface. These phenomena can be magnetic fields or electro-magnetic waves that give rise to a surface expression which in turn is interpreted as representative of subsurface objects. These waves, however, may be attenuated and/or distorted by a number of factors including soil moisture, corrosion, and proximity to other surface and subsurface facilities. Due to the presence of reinforced concrete footings and other metallic features such as stairs, fencing, and reinforcing bars in walls along the survey perimeter it is possible a UST might exist adjacent to a metallic or metal bearing structure without being detected.

APPENDIX D: Data Adequacy Report

MEMORANDUM

Data Validation Report

To: Michael Flaugher – PAS
From: Sarah Von Raesfeld – WCK
Report Reference: Calscience Environmental Laboratories SDGs 12-10-1212, 12-10-1327, 12-10-1457, 12-10-1538, and 12-10-1606
Jones Environmental Laboratory SDG B5399

Date: November 9, 2012
Site: GE - Burbank
Job Number: 10501422
File Reference:

This data validation report has been prepared for the above referenced site and summarizes the review of analytical data submitted by Calscience Environmental Laboratories, Inc. (CEL), located in Garden Grove, California and Jones Environmental Laboratory (JEL), located in Fullerton, California. Samples were collected October 17, 2012 through October 26, 2012 as part of the Site Investigation conducted in Burbank, California. Eighty-seven (87) primary soil samples (50 submitted on hold), three (3) field duplicates, and ten (10) field quality control (QC) samples were submitted to CEL. Thirty-nine (39) primary soil vapor samples, two (2) field duplicates, and two (2) ambient air blanks were submitted to JEL. The following samples were submitted as field duplicate pairs:

<i>Duplicate</i>	<i>Primary Sample</i>
DUP-1	B-11-0.5
DUP-2	B-14-10
DUP-3	B-4-15
SG-16-5'	SG-16-5' DUP
SG-15-5'	SG-15-5' DUP

Samples were analyzed by one or more of the following methods:

- Semi-volatile organic compounds (SVOCs) by United States Environmental Protection Agency (USEPA) Method SW8270C
- Title 22 Metals by USEPA Methods SW6010B, SW7471A, and SW7470A
- Total petroleum hydrocarbons (TPH), C6-C44 carbon chain, by USEPA Method SW8015B
- Polychlorinated biphenyls (PCBs) by USEPA Method SW8082
- Volatile organic compounds (VOCs) by USEPA Methods SW8260B

Results were reviewed in accordance with the appropriate methods listed above. In addition, the USEPA Contract Laboratory Program National Functional Guidelines for Organic (USEPA 2008) and Inorganic (USEPA 2010) Data Review was used to provide overall guidance for the

November 9, 2012

validation process. The data review included an evaluation of the following QC parameters based on standard performance criteria presented in these documents.

- Analytical Holding Times/Sample Preservation
- Method Blanks, Trip Blanks, and Equipment Rinse Blanks
- Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD) Performance
- Surrogate Percent Recovery
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) Sample Performance
- Field Duplicate Comparison
- Detection Limits

Summary of Findings:

Data were qualified as necessary based on the data validation process described above. Qualified results are listed in Table 1. All samples were analyzed according to the accompanying chains of custody (COCs) and all analytical holding times were met.

QC data were reviewed for laboratory and instrument precision and accuracy from LCS/LCSD recoveries and relative percent differences (RPDs), MS/MSD sample recoveries and RPDs, lab duplicate RPDs, and surrogate recoveries (organic analyses). Data were not qualified in cases where a surrogate recovery was outside the control limit as a result of sample extract dilution. All precision and accuracy QC elements were found to be within acceptable limits with the following exceptions:

- One or more surrogate recoveries associated with the SVOC analysis of B-13-0.5 and B-01-0.5 were greater than the upper control limit. No SVOCs were detected in the samples, so no data were qualified.
- One surrogate recovery associated with the VOC analysis of B-15-0.5 was less than the lower control limit. Non-detected VOCs were qualified as not detected at the estimated reporting limit (UJ) with a low bias. Detected VOCs were qualified as estimated (J) with a low bias.
- Two acid surrogates associated with the SVOC analysis of B-10-15 were less than the lower control limit. All acid extractable SVOCs were not detected and were qualified as not detected at the estimated reporting limit (UJ) with a low bias.
- The LCS/LCSD percent recoveries associated with the SVOC analysis of eleven samples were less than the lower control limit for phenol. Phenol was non-detect in all of the samples and was qualified as not detected at the estimated reporting limit (UJ) with a low bias.
- The MS/MSD percent recoveries associated with the SVOC analysis of B-03-15 were less than the lower control limit for phenol. Phenol was non-detect in the sample and was qualified as not detected at the estimated reporting limit (UJ) with a low bias.

November 9, 2012

- The MS/MSD percent recoveries associated with the metals analysis of B-16-5 were less than the lower control limit for chromium. Chromium was detected in the sample and was qualified as estimated (J) with a low bias.

Field sampling precision was evaluated by using the calculated RPD between results reported for the field duplicate pairs, which are listed above. All field duplicate met the control limit of 25 with the exception of arsenic, copper, TPH C37-C40, and TPH C41-C44 in the field duplicate pair B-11-0.5 / DUP-1; lead in B-14-10 / DUP-2; and chromium in B-4-15 / DUP-3. These results were qualified as estimated (J) in the primary field sample, as listed in Table 1.

No target analytes were detected in any method blank, trip blank, or equipment rinse blank samples with the following exception:

- Two equipment rinse blanks, EB-101912 and EB-102212, associated with the analysis of thirteen soil samples contained toluene. Toluene was not detected in the samples, so no data were qualified.

Sample dilutions for all analyses were performed appropriately with respect to the analyte present in the highest concentration. All results that were reported had the lowest dilution factor possible while still detected within the calibration range of the instrument.

All data submitted for this project are of known and acceptable quality as qualified, based on laboratory-established control limits and the data quality objectives. These data are considered acceptable for their intended purposes.

TABLE 1
SUMMARY OF QUALIFIED DATA
GE PAC
BURBANK, CALIFORNIA

Page 4 of 4

Sample Identification	Laboratory Identification	Matrix	Method	Parameter	Result	Units	Flag	Bias	Comment
B-10-15	12-10-1606	Soil	EPA 8270C	4-Nitrophenol	< 0.50	mg/kg	UJ	Low	Surrogate %R < LCL
B-10-15	12-10-1606	Soil	EPA 8270C	2-Nitrophenol	< 0.50	mg/kg	UJ	Low	Surrogate %R < LCL
B-10-15	12-10-1606	Soil	EPA 8270C	Pentachlorophenol	< 2.5	mg/kg	UJ	Low	Surrogate %R < LCL
B-10-15	12-10-1606	Soil	EPA 8270C	2,4,6-Trichlorophenol	< 0.50	mg/kg	UJ	Low	Surrogate %R < LCL
B-10-15	12-10-1606	Soil	EPA 8270C	2,4,5-Trichlorophenol	< 0.50	mg/kg	UJ	Low	Surrogate %R < LCL

Notes:

µg/kg- microgram per kilogram

mg/kg- milligram per kilogram

J - result is estimated.

UJ - the analyte is not detected; however, the reporting limit or method detection limit is qualified as estimated

%R - percent recovery

CL - control limit

EPA - Environmental Protection Agency

FD - field duplicate

LCL - lower control limit

LCS/LCSD - laboratory control sample/laboratory control sample duplicate

MS/MSD - matrix spike/matrix spike duplicate

NDT - not determined

RPD - relative percent difference

TPH - total petroleum hydrocarbons

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

RPD - Relative Percent Difference , CL - Control Limit

Work Order Number: 12-10-1212

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Virendra,

I'm looking at my COC copies of today submitted samples and I see I didn't check VOCs for soil sample B-01-0.5. Please run VOC analysis for this sample.

Thanks,

BUILDING A BETTER WORLD

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

Work Order Number: 12-10-1212

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Virendra,

I'm looking at my COC copies of today submitted samples and I see I didn't check VOCs for soil sample B-01-0.5. Please run VOC analysis for this sample.

Thanks,

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

RPD - Relative Percent Difference , CL - Control Limit

Work Order Number: 12-10-1327

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

Work Order Number: 12-10-1327

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Subject: GE PAC Burbank - STLC Analytical

Virendra,

Please have the following sample analyzed for STLC metals:

- B-03-0.5 (12-10-1212-1)
- B-17-0.5 (12-10-1327-1)
- B-07-15 (12-10-1457-14)
- B-15-10 (12-10-1538-1)
- B-09-15 (12-10-1606-14)

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

RPD - Relative Percent Difference , CL - Control Limit

Work Order Number: 12-10-1457

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

Work Order Number: 12-10-1457

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Subject: GE PAC Burbank - STLC Analytical

Virendra,

Please have the following sample analyzed for STLC metals:

- B-03-0.5 (12-10-1212-1)
- B-17-0.5 (12-10-1327-1)
- B-07-15 (12-10-1457-14)
- B-15-10 (12-10-1538-1)
- B-09-15 (12-10-1606-14)

 Received by: (Signature/Affiliation) [Signature] Date: _____ Time: _____

DISTRIBUTION: White with final report, Green and Yellow to Client.
Please note that pages 1 and 2 of 2 of our T/Cs are printed on the reverse side of the Green and Yellow copies respectively.

WORK ORDER #: 12-10-1457

SAMPLE RECEIPT FORM

Cooler 1 of 1

CLIENT: MWH

DATE: 10/19/12

TEMPERATURE: Thermometer ID: SC4 (Criteria: 0.0°C - 6.0°C, not frozen)
Temperature 2.7°C - 0.3°C (CF) = 2.4°C
Blank Sample
Sample(s) outside temperature criteria (PM/APM contacted by: _____).
Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling.
Received at ambient temperature, placed on ice for transport by Courier.
Ambient Temperature: Air Filter
Initial: JS

CUSTODY SEALS INTACT:
Cooler No (Not Intact) Not Present N/A
Sample No (Not Intact) Not Present
Initial: JS
Initial: TS

SAMPLE CONDITION:
Chain-Of-Custody (COC) document(s) received with samples... Yes No N/A
COC document(s) received complete...
Collection date/time, matrix, and/or # of containers logged in based on sample labels.
No analysis requested. Not relinquished. No date/time relinquished.
Sampler's name indicated on COC...
Sample container label(s) consistent with COC...
Sample container(s) intact and good condition...
Proper containers and sufficient volume for analyses requested...
Analyses received within holding time...
pH / Res. Chlorine / Diss. Sulfide / Diss. Oxygen received within 24 hours...
Proper preservation noted on COC or sample container...
Unpreserved vials received for Volatiles analysis
Volatile analysis container(s) free of headspace...
Tedlar bag(s) free of condensation...

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

RPD - Relative Percent Difference , CL - Control Limit

Work Order Number: 12-10-1538

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Virendra Patel

Subject: GE PAC Burbank 10/22 TB sample

Virendra,

I logged a trip blank (TB-102212) on yesterday's COC but didn't put the 2 vials in the cooler. Please use this email as record to update the COC to reflect no analysis for TB-102212.

Thanks,

BUILDING A BETTER WORLD

SAMPLE ANOMALY FORM

SAMPLES - CONTAINERS & LABELS:

Comments:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired – list sample ID(s) and test
- Insufficient quantities for analysis – list test
- Improper container(s) used – list test
- Improper preservative used – list test
- No preservative noted on COC or label – list test & notify lab
- Sample labels illegible – note test/container type
- Sample label(s) do not match COC – Note in comments
 - Sample ID
 - Date and/or Time Collected
 - Project Information
 - # of Container(s)
 - Analysis
- Sample container(s) compromised – Note in comments
 - Water present in sample container
 - Broken
- Sample container(s) not labeled
- Air sample container(s) compromised – Note in comments
 - Flat
 - Very low in volume
 - Leaking (Not transferred - duplicate bag submitted)
 - Leaking (transferred into CalScience Tedlar® Bag*)
 - Leaking (transferred into Client's Tedlar® Bag*)
- Other: _____

(-8) Trip blank not received.

HEADSPACE – Containers with Bubble > 6mm or ¼ inch:

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

Work Order Number: 12-10-1538

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Virendra,

I logged a trip blank (TB-102212) on yesterday's COC but didn't put the 2 vials in the cooler. Please use this email as record to update the COC to reflect no analysis for TB-102212.

Thanks,

SAMPLE RECEIPT FORM

Cooler 1 of 1

CLIENT: MWH

DATE: 10/22/12

TEMPERATURE: Thermometer ID: SC4 (Criteria: 0.0°C – 6.0°C, not frozen)

Temperature 2.8 °C - 0.3°C (CF) = 2.5 °C Blank Sample

- Sample(s) outside temperature criteria (PM/APM contacted by: _____).
- Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling.

Received at ambient temperature, placed on ice for transport by Courier.

Ambient Temperature: Air Filter

Initial: AP

CUSTODY SEALS INTACT:

- Cooler _____ No (Not Intact) Not Present N/A
- Sample _____ No (Not Intact) Not Present

Initial: AP

Initial: [Signature]

SAMPLE CONDITION:

	Yes	No	N/A
Chain-Of-Custody (COC) document(s) received with samples.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
COC document(s) received complete.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Collection date/time, matrix, and/or # of containers logged in based on sample labels.			
<input type="checkbox"/> No analysis requested. <input type="checkbox"/> Not relinquished. <input type="checkbox"/> No date/time relinquished.			
Sampler's name indicated on COC.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Sample container label(s) consistent with COC.....	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Sample container(s) intact and good condition.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Proper containers and sufficient volume for analyses requested.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Analyses received within holding time.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
pH / Res. Chlorine / Diss. Sulfide / Diss. Oxygen received within 24 hours...	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Proper preservation noted on COC or sample container.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> Unpreserved vials received for Volatiles analysis			
Volatile analysis container(s) free of headspace.....	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Tedlar bag(s) free of condensation.....	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

SAMPLE ANOMALY FORM

SAMPLES - CONTAINERS & LABELS:

Comments:

- Sample(s) NOT RECEIVED but listed on COC
- Sample(s) received but NOT LISTED on COC
- Holding time expired – list sample ID(s) and test
- Insufficient quantities for analysis – list test
- Improper container(s) used – list test
- Improper preservative used – list test
- No preservative noted on COC or label – list test & notify lab
- Sample labels illegible – note test/container type
- Sample label(s) do not match COC – Note in comments
 - Sample ID
 - Date and/or Time Collected
 - Project Information
 - # of Container(s)
 - Analysis
- Sample container(s) compromised – Note in comments
 - Water present in sample container
 - Broken
- Sample container(s) not labeled
- Air sample container(s) compromised – Note in comments
 - Flat
 - Very low in volume
 - Leaking (Not transferred - duplicate bag submitted)
 - Leaking (transferred into CalScience Tedlar® Bag*)
 - Leaking (transferred into Client's Tedlar® Bag*)
- Other: _____

(-8) Trip blank not received.

HEADSPACE – Containers with Bubble > 6mm or ¼ inch:

Sample #	Container ID(s)	# of Vials Received	Sample #	Container ID(s)	# of Vials Received	Sample #	Container ID(s)	# of Cont. received	Analysis

Comments: _____

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

RPD - Relative Percent Difference , CL - Control Limit

Glossary of Terms and Qualifiers

Work Order Number: 12-10-1606

Qualifier	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

MPN - Most Probable Number

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any litigation which may arise.

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

EXECUTIVE SUMMARY

MWH Americas, Inc. (MWH) was retained by General Electric Company (GE) on behalf of Pacific Airmotive Corporation (PAC), an indirect, wholly-owned subsidiary of GE to perform a Phase I Environmental Site Assessment (ESA), American Land Title Association (ALTA) survey, asbestos and lead-based paint survey, and concrete sampling of a property located at 3003 North Hollywood Way, Los Angeles County, California (the “Site”). The Site is 0.69 acres in size and currently vacant. According to historical records, the Site was formerly used to test aircraft engines and consists of several adjoined buildings that contain engine test cells and associated control rooms. The ESA and media sampling was conducted to support the potential sale of the Site.

This Phase I ESA was completed following the general requirements of the American Society for Testing and Materials (ASTM) Designation: E 1527-05, which involves a review of available environmental records, a site visit, and interviews with Site personnel and local agencies to identify recognized environmental conditions at the Site. This Phase I ESA was not intended to be an all appropriate inquiry (AAI).

MWH contracted with a commercial database service, Environmental Data Resources, Inc. (EDR), to review federal, state and local regulatory agency lists for references to the Site and listings within the appropriate ASTM Standard minimum search distance of the Site. In addition, MWH contacted the City of Burbank Fire Department to provide additional information about the Site, and reviewed available files for the Site. MWH performed the Phase I site visit on February 28, 2011. Based on the February 28, 2011 visit, building construction materials were observed to evaluate whether these media should be sampled and analyzed to characterize these materials for disposal and/or recycling purposes. Based on MWH observations, representative areas of concrete were chosen, and on March 29, 2011, MWH collected concrete samples from these areas.

The surrounding properties are developed for industrial and commercial use. In general, the surrounding land use consists primarily of industrial, commercial, and residential area uses within one mile of the Site. Land usage on properties immediately adjoining the Site is summarized below:

- **North** – According to the Site contact, Mike Hoehn from B.L. Hall, Inc., a storage lot is located north of the Site. Parked vehicles were observed in this area at the time of the site visit.
- **South** – According to the Site contact the property west and south of the Site is owned by the Burbank-Glendale-Pasadena Airport Authority. An asphalt and dirt lot, construction equipment, and soil stockpiles were observed in this area at the time of the site visit.
- **East** – An adjacent parking lot is located east of the Site. According to a sign on the parking lot gate, the parking lot is used by the Burbank-Glendale-Pasadena Airport Authority. Tulare Avenue is located south of this parking lot and leads to Hollywood Way. Businesses east of the Site across Hollywood Way include Iron Works, Pasadena Art Glass, Precise Roofing, and the Starz Plaza.
- **West** – According to the Site contact the property west and south of the Site is owned by the Burbank-Glendale-Pasadena Airport Authority. An asphalt and dirt lot, construction

equipment and stockpiles were observed in this area at the time of the site visit. Burbank-Glendale-Pasadena Airport is located further west and south of the Site.

The assessment has revealed a historical *recognized environmental condition* (HREC) in connection with the Site:

- MWH prepared a Technical Memorandum on March 20, 2006 providing a summary of remedial investigations at the Site. According to the memo, in 1984, a jet fuel spill was reported to the Regional Water Quality Control Board. KJE excavated soil from 2 areas. Samples were collected from a single soil boring to define the vertical extent of the spill. The results indicated the presence of toluene and jet fuel in soils up to 75 feet below ground surface (bgs). Since groundwater was at least 200 feet bgs, it was concluded that the spill would not impact groundwater.

This assessment has revealed no evidence of current *recognized environmental conditions* (REC) in connection with the Site.

De minimis conditions, which generally do not present a threat to human health or the environment, but which could be improved as best management practices, were not observed during the assessment.

The following conditions, not considered RECs, HRECs, or *de minimis* conditions, were observed during the site visit.

- One 5 foot by 5 foot oil stain was observed outside of Test Cell No. 4 on the loading dock.
- Oil stains were observed on the surface area of the sound baffles observed in Test Cell No. 1 (approximately 157.3 square foot [sf]).
- Oil stains were observed in the Engine Test Cell on the exhaust tube, walls, floor, and other supporting structures.
- Surface stains, each less than 1 sf in size, and cracks in the asphalt, each less than 10 feet with a gap of 1 inch, were observed in the parking lot.
- Debris and trash in piles less than 1 sf in size were observed scattered throughout the buildings.

MWH has performed this Phase I ESA in general conformance with the scope of work required by ASTM Standard Practice E 1527-05 and in accordance with our proposal to GE dated January 17, 2011 for the property located at 3003 North Hollywood Way in Burbank, Los Angeles County, California. Limitations associated with this Phase I ESA are included in Section 1 of this report. This Phase I ESA was not intended to be an all appropriate inquiry (AAI).

Appendix J	ALTA Land Survey
Appendix K	Concrete Sampling Photographic Log
Appendix L	Concrete Sampling Results

1.0 INTRODUCTION

MWH Americas, Inc. (MWH) was retained by General Electric Company (GE) on behalf of Pacific Airmotive Corporation (PAC), an indirect, wholly-owned subsidiary of GE, to perform a Phase I Environmental Site Assessment (ESA), American Land Title Association (ALTA) survey, asbestos and lead-based paint survey, and concrete sampling of a property located at 3003 North Hollywood Way, Burbank, Los Angeles County, California (the “Site”). The Site is 0.69 acres in size, and is currently vacant. According to historical records, the Site was formerly used to test air craft engines and consists of several adjoined buildings that contain engine test cells and control rooms. MWH performed a site visit on February 28, 2011. Based on the February 28, 2011 visit, building construction materials were observed to evaluate whether these media should be sampled and analyzed to characterize these materials for disposal and/or recycling purposes. Based on MWH observations, representative areas of concrete were chosen, and on March 29, 2011, MWH collected concrete samples from these areas.

1.1 PURPOSE

This Phase I ESA was completed in general accordance with the American Society for Testing and Materials (ASTM) Standard Practice E 1527-05 and to identify “recognized environmental conditions” (RECs) at the Site. RECs are defined by ASTM as follows:

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

In addition to RECs, this Phase I ESA also identified historical RECs and de minimis or other conditions associated with the Site that may be of interest. This Phase I ESA was not intended to be an all appropriate inquiry (AAI).

1.2 DETAILED SCOPE OF SERVICES

The scope of the Phase I ESA included the following activities:

- **ALTA Survey** – MWH subcontracted Hennon Surveying & Mapping, Inc. to provide an ALTA survey with spot elevations over the fee title parcel (Assessor’s Parcel Number [APN] 2466-011-013) as well as map both the existing traveled path to Hollywood Way and the existing ingress/egress easement. The ALTA survey included a vicinity map, parcel area, exterior dimensions of buildings at ground level, square footage of exterior footprint of buildings at ground level, building height, improvements, parking, access to a public street, and surface evidence of utilities.
- **Records Search** - A search of publicly available environmental databases was conducted through Environmental Data Resources, Incorporated (EDR) of Milford, Connecticut. MWH contacted EDR to obtain readily available and relevant historical

information. This includes (where and if available): aerial photographs, Sanborn Fire Protection Maps (Sanborn®), and U.S. Geological Society (USGS) 7.5-minute topographic maps. The City of Burbank Fire Department was also contacted and historical files were reviewed from their database. MWH also reviewed existing information and data that was compiled several years ago by GE Corporate Environmental Programs and MWH.

- **Interviews** - MWH conducted interviews with the Site contacts identified by GE.
- **Site Reconnaissance** - MWH conducted a site visit of the property to observe and document current Site conditions and to identify potential RECs due to historic or current operations/activities. The site visit included a site walk, taking photographs to document current conditions, and a drive-by of the surrounding area.
- **Asbestos and Lead-Based Paint Survey** - MWH subcontracted ESIS, Inc. Health, Safety, and Environmental Services (ESIS HSE) to perform an asbestos-containing material (ACM) and lead-based paint survey at the Site. The purpose of the survey was to identify ACMs that were not previously sampled, and would require proper removal before commencing demolition activities. Sampling and analysis of paint was conducted to determine proper work practices during construction activities.
- **Concrete Sampling** - During the Phase I site visit, building construction materials were observed to evaluate whether these media should be sampled and analyzed to characterize these materials for disposal and/or recycling purposes. Based on MWH observations, representative areas of concrete were chosen, and on March 29, 2011, MWH collected concrete samples from these areas.

1.3 SIGNIFICANT ASSUMPTIONS

In preparing this report, MWH has relied upon certain verbal information and representations provided by interviewees; documents provided by the Site owner, operator, client, and/or others associated with the Site; a computer search of government databases by a firm whose business is to provide those services; and a general internet search to identify information associated with the Site. Except as discussed, MWH has relied upon this information and did not attempt to independently verify its accuracy or completeness, but did not detect inconsistency or omission of a nature that might call into question the validity of the information. To the extent that the conclusions in this report are based in whole or in part on such information, they are contingent on its validity. MWH assumes no responsibility for any consequence arising from any information or condition that was concealed, withheld, misrepresented or otherwise not fully disclosed or made available to MWH.

1.4 LIMITATIONS AND EXCEPTIONS

This Phase I ESA was completed under the direction of MWH's client GE on behalf of PAC. It was a limited inquiry, and intrusive work would be necessary to document all environmental conditions at the Site. MWH completed this Phase I ESA, ALTA survey, asbestos and lead-based paint survey, and the concrete sampling in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions. Information provided to MWH was accepted in good faith and was assumed to be accurate unless written documentation or visual observations presented contradictions to this assumption.

MWH's findings presented in the Phase I ESA Report are based on observations and data collected at one point in time. Assessment results are based upon conditions and operations at the time of the site visit. A change in any of these factors may alter the findings and conclusions expressed by MWH. Because professional judgments incorporated into the report will be based on limited evidence, there is an inherent uncertainty in the conclusions drawn and reported.

The opinions, assumptions and analysis that are the basis for the projections, estimates and conclusions, if any, reached in a task are subject to financial or market conditions, regulatory change, and other uncertainties that cannot be fully identified or qualified. Opinions, projections, or estimates may materially vary due to events and circumstances that are not reasonably foreseeable, are beyond the scope or not a part of the task, or due to inaccurate or incomplete data provided and used to formulate the projections, opinions, or estimates presented. In no event shall MWH be liable for any indirect, incidental, special or consequential damages whatsoever (including but not limited to lost profits or interruption of business) arising out of or related to the task provided by MWH, even if advised of the possibility of such damages.

1.5 SPECIAL TERMS AND CONDITIONS

This Phase I ESA generally meets the requirements and guidelines of *ASTM Standard Practice E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, in accordance with our proposal to GE dated January 17, 2011 for the property located at 3003 North Hollywood Way, Burbank, Los Angeles County, California. No additional special terms and conditions were associated with the performance of this Phase I ESA.

1.6 USER RELIANCE

The services provided by MWH are intended solely for the benefit of GE and not for any third-party. Any third party may necessarily have different interests, purposes, and motives than GE with regard to the Phase I ESA report. Therefore, use of the report by any third party is expressly prohibited without the express written consent of GE and MWH. MWH does not provide reliance letters.

2.0 SITE DESCRIPTION

2.1 SITE LOCATION

The location of the Site is indicated on **Figure 1**. A description of the general location of the Site and the address is provided below:

General Location: The Site is located along North Hollywood Way, Burbank, California, Los Angeles County. The Site is approximately 0.1 mile south of San Fernando Road.

Site Address: 3003 North Hollywood Way
Burbank, California 91505

The Site is accessed via Hollywood Way from Interstate 5 (I-5) Freeway. The Site entrance is accessed via Tulare Avenue. Commercial and residential properties exist along Hollywood Way.

2.2 SITE FEATURES

Figure 2 shows the layout of the Site and pertinent features. The Site is approximately 0.69 acres in size and is currently vacant. The Site includes the following structures: adjoined buildings containing engine test cells, control rooms, a loading dock, two sumps, a clarifier, three groundwater monitoring wells, aboveground storage tanks (ASTs), and a fenced area containing ASTs. Chain link fencing was observed around the perimeter of the Site.

2.3 OPERATIONS

The Site is no longer used for operations of any kind. PAC owns the Site and contracts a local company (B.L. Hall, Inc.) to provide caretaking operations at the Site, for example, Site access and Site maintenance. According to a memo prepared by Mary Sullivan of GE dated October 20, 2003, the facility was used from 1947 through 1996. According to the memo, in 1985, UNC PAC purchased the Site and another nearby site from Purex Industries. The Site was formerly a place of business for PAC and its successors which had been in business since 1928. PAC serviced aircraft and aircraft engines, and successor corporations continued these operations. According to a letter from Lisa Hamilton of GE, dated December 1, 2005, GE acquired an entity in 1997, which subsequently acquired the corporate parent of PAC. Consequently, PAC is an indirect, wholly-owned subsidiary of GE.

The Engine Test Cell Building on the northeast corner of the Site, consists of a former engine test cell (Test Cell 5). A Control Room is located south and adjacent to the Engine Test Cell Building. The Jet Engine Test Cells Building on the northwest side of the Site, consists of a former maintenance shop, two control rooms, and 4 adjoined jet engine test cells (Test Cells Nos. 1 through 4).

According to the ALTA survey map dated April 18, 2011 by Hennon Surveying & Mapping, Inc., the buildings at the Site comprise a total of 12,721 square foot (sf). According to a memo prepared by John P. Grossman of Grossman Design Group dated June 2, 1997, Test Cells Nos. 1 through 4 occupy a heavily reinforced concrete structure with 18 to 32 foot high walls. The building has 12-inch thick walls and roof slabs, 6 inch thick floor slabs, and concrete footings. Test Cell No. 2 has a small concrete isolation pad. Test Cell No. 5 is a separate building of

similar reinforced concrete construction with 26 to 40 foot high walls. Both buildings contain control rooms with elevated concreted floor slabs and concrete masonry walls.

2.4 SITE UTILITIES

The Site is vacant and no utilities or services are provided to the Site.

2.5 ADJOINING PROPERTIES

Figure 2 shows the Site location and surrounding properties. In general, the surrounding land use consists primarily of commercial, industrial, and residential area uses within one mile of the Site. The Site is immediately surrounded by parking and asphalt paved areas to the east, west, and south. Land usage on properties immediately adjoining the Site is summarized below:

- **North** – According to the Site contact, Mike Hoehn from B.L. Hall, Inc., a storage lot is located north of the Site. Parked vehicles were observed in this area at the time of the site visit.
- **South** – According to the Site contact the property west and south of the Site is owned by the Burbank-Glendale-Pasadena Airport Authority. An asphalt and dirt lot, construction equipment, and soil stockpiles were observed in this area at the time of the site visit.
- **East** – An adjacent parking lot is located east of the Site. According to a sign on the parking lot gate, the parking lot is used by the Burbank-Glendale Airport Authority. Tulare Avenue is located south of this parking lot and leads to Hollywood Way. Businesses east of the Site across Hollywood Way include Iron Works, Pasadena Art Glass, Precise Roofing, and the Starz Plaza.
- **West** – According to the Site contact the property west and south of the Site is owned by the Burbank-Glendale-Pasadena Airport Authority. An asphalt and dirt lot, construction equipment and stockpiles were observed in this area at the time of the site visit. Burbank-Glendale-Pasadena Airport is located further west and south of the Site.

3.0 INFORMATION PROVIDED BY USER

The ASTM Standard Practice E 1527-05 Standard states the “User” of the Phase I ESA report should provide certain information regarding the Site. As the “User” of the report, GE provided this information which is summarized below.

3.1 ENVIRONMENTAL LIENS

GE is not aware of any environmental cleanup liens on the property.

3.2 LAND USE LIMITATIONS

GE is not aware of any engineering controls, land use restrictions, or institutional controls related to the Site.

3.3 SPECIALIZED KNOWLEDGE

GE has no specialized knowledge or experience related to the property or adjoining property and has no specialized knowledge of chemicals or processes used at the Site.

3.4 FAIR MARKET PRICE

The property is not being sold. Therefore, a discussion of a fair market price for the property is not applicable.

3.5 COMMONLY KNOWN INFORMATION

GE does have commonly known or reasonably ascertainable information based on information provided in the lease folders that would help MWH identify conditions indicative of releases or threatened releases at the Site.

3.6 KNOWN CLEANUPS

GE does is aware of cleanup activities that have been completed at the Site. A 1984 fuel pipeline spill was remediated by excavating impacted soils. Details of this cleanup are discussed in Section 4.7.

3.7 KNOWN DOCUMENTATION

GE has known documentation about spills or chemical releases at the Site. The documentation is public information and is summarized in this report.

3.8 OBVIOUS INDICATORS

Obvious indicators that GE is aware of that may point to the presence or likely presence of any contamination at the Site include the GE’s knowledge of the Site being located within a regional groundwater investigation and cleanup site, also known as the San Fernando Valley Superfund Site.

4.0 RECORDS REVIEW

The purpose of the records review was to obtain and review records that would help identify RECs in connection with the Site. The records review focused on information that was publically available; obtainable within a reasonable amount of time and for a reasonable cost; and practical to review. In addition, MWH obtained and reviewed documents provided by GE that were relevant to the Phase I ESA. A list of documents reviewed during this Phase I ESA is provided in Section 12.0 of this report.

4.1 SITE INFORMATION SOURCES

Information for the records review was obtained from the following sources:

- **Environmental Databases** - An environmental database records search for the Site was conducted by EDR, of Milford, Connecticut. The EDR Radius Map with Geocheck[®], dated February 22, 2011 is included as **Appendix A**.
- **Topographic Maps** - A review of historical topographic maps was performed using maps provided in the EDR Historical Topographic Map Report. A copy of the EDR Historical Topographic Map Report is provided as **Appendix B**.
- **Aerial Photographs** - A review of historical aerial photographs was performed using photographs provided in the EDR Aerial Photograph Report. A copy of the EDR Historical Aerial Photograph Report is provided as **Appendix C**.
- **City Directory** - A review of a historical city directory was performed using the EDR City Directory Abstract, which included occupancy information for the Site and surrounding area. A copy of the EDR City Directory Abstract is provided as **Appendix D**.
- **Sanborn[®] Maps** - A review of historical Sanborn fire insurance maps was completed using information provided in the EDR Certified Sanborn[®] Map Report. A copy of the EDR Certified Sanborn[®] Map Report is provided as **Appendix E**.
- **Physical Setting Sources** - In addition to physical setting information provided by EDR in the Geocheck[®] report, MWH reviewed publicly available information on the internet regarding geology, bedrock, groundwater, etc.
- **Other Historical Records** - MWH obtained reviewed historical records from the GE King of Prussia (KOP) office in Pennsylvania and the Burbank Fire Department. These records are provided in **Appendix G**.

Information from the records search was examined to evaluate the potential for RECs with respect to historical reporting and response to environmental releases, permitted discharges, spills, and other emissions. Some records reviewed pertained not just to the Site, but also to properties within an additional minimum search distance from the Site. A review of information from these adjacent properties, along with the geologic characteristics of the area, could have implications relative to potential environmental impacts at the Site.

4.2 ENVIRONMENTAL DATABASES

EDR completed an electronic search of state and federal environmental databases for the Site and surrounding properties within one mile of the Site on February 22, 2011. A review of current state and federal databases provided information on properties of known or potential

environmental concern. This includes sites with identified or possible contamination (e.g., Superfund and state-listed sites, old landfills, sites with historical spills or leaking underground storage tanks [LUST], etc.), facilities that generate hazardous wastes, and properties that contain ASTs or underground storage tanks (USTs). A list of the state and federal databases reviewed is provided in the Executive Summary of the EDR Radius Map report provided as **Appendix A**.

EDR includes a plotted map within the data report with coded symbols to indicate sites of concern. These sites have been further examined and evaluated for potential impact on the subject Site. The data report also includes unplotted sites that have insufficient addresses to plot without field confirmation. The list of unplotted sites has been reviewed and evaluated for potential impact on the Site.

4.2.1 Target Site

According to the EDR report, the address for the Site was identified in two databases, listed as UNC PAC. The EDR database entries are discussed below.

HAZNET

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the Cal-EPA Department of Toxic Substance Control (DTSC). The waste category cited for the Site was indicated as waste oil and mixed oil and the disposal method was listed as recycler. The disposal tonnage reported was 3.96 tons. EDR did not provide any further information regarding the year that this waste was disposed of. According to historical records the Site has been inactive since 1996.

4.2.2 Surrounding/Adjoining Properties

Surrounding or adjoining properties identified by the EDR database search are either considered *plotted* sites (those sites that could be located by the given address and are identified on the EDR Report Overview Map) or *orphan* sites (sites with insufficient address information such that they can only be identified within the zip code, city, or county of the Site). The proximity of the plotted and orphan sites to the target Site, along with the geologic characteristics of the area, could have implications relative to potential environmental impacts at the Site.

The EDR search identified several plotted sites within a one-mile radius of the Site. The EDR search also identified 12 orphan properties. The plotted and orphan sites are discussed in further detail below.

Federal NPL

A review of the Federal National Priority List (NPL) indicates there is one property identified as a priority cleanup site under the Superfund program located within 1/8 mile of the Site. The property as located covers an area at a higher elevation than the Site. This site is known as San Fernando Valley (Area 1) North Hollywood Wellfield and is also identified in the Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list and the HIST Cal-Sites list for potential hazardous substance sites.

Federal CERCLIS NFRAP

A review of the Federal CERCLIS No Further Remedial Action Planned (NFRAP) list indicates there is one property located within 1/8 mile southeast of the Site and three sites located ¼ to ½ mile northeast and southeast of the Site. These properties are located at lower elevations than the Site. The closest property located within 1/8 mile of the Site was identified as a PAC facility at 2940 North Hollywood Way. Preliminary assessment of this property was recorded from June 1 1984 to September 1, 1984.

Federal RCRA CORRACTS

A review of the Federal Resource Conservation and Recovery Act (RCRA) Corrective Action Activity (CORRACTS) list indicates there is one property located within 1/2 mile southeast of the Site at a lower elevation. The facility was assigned a low corrective action priority on November 15, 1992. During a Stabilization Measures Evaluation, it was concluded that the facility was not amenable to stabilization activity at the time because it 1) appeared to be technically infeasible or inappropriate, or 2) there was a lack of technical information.

Federal RCRA non-CORRACTS TSD

A review of the Federal RCRA non-CORRACTS Treatment, Storage, and Disposal (TSD) facilities list indicates there are two properties located within 1/2 mile southeast of the Site at lower elevations.

Federal RCRA Generators

The Federal RCRA Generators list is divided between RCRA small quantity generators (SQG) and large quantity generators (LQG).

A review of the RCRA-SQG list indicates there is one property located within 1/8 to ¼ mile of the Site at a lower elevation. A review of the RCRA-LQG list indicates there are 12 properties located within 1/2 of a mile radius of the Site. Four of these sites are located at higher elevations, and 8 sites are located at lower elevations from the Site.

FEDERAL INSTITUTIONAL CONTROLS / ENGINEERING CONTROLS REGISTRIES

A review of the US Engineering Controls (US ENG CONTROLS) list indicates there is one property located within 1/8 mile of the Site. The property is located at an equal or higher elevation than the Site. This property is known as San Fernando Valley (Area 1) North Hollywood Wellfield. This property has also been identified in the US Institutional Controls (US INST CONTROLS) list.

STATE AND TRIBAL - EQUIVALENT CERCLIS

A review of the State and tribal-equivalent CERCLIS list indicates there are 16 properties located within 1 mile of the Site. Three of the properties are at higher elevations than the Site.

STATE AND TRIBAL LEAKING STORAGE TANK LISTS (LUST)

A review of the State and tribal LUST lists indicate there are 12 properties located with ½ mile of the Site. Two properties are located at higher elevations and 10 sites are located at lower elevations. All cases for the LUST properties identified are listed as completed and closed.

SPILLS, LEAKS, INVESTIGATION AND CLEANUP (SLIC)

A review of the SLIC list indicates there are 23 sites located between 1/8 and ½ mile from the Site. Eight of the sites are located at higher elevations and 15 are located at lower elevations than the Site. Cases for three of the properties have been identified as closed while the cases for the remaining sites show remediation, site assessment, or assessment and interim remedial

action. The closest property to the Site identified as the PAC facility at 2940 North Hollywood Way is listed in this database as undergoing remediation. According to EDR, PAC owned the Site from 1947 to 2006 and activities at this Site included aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. The former Site operations resulted in volatile organic compound (VOC) impacts to soil and groundwater, primarily tetrachloroethene (PCE). U.S. Environmental Protection Agency Region 9 (USEPA) and the RWQCB required Site characterization. USEPA issued an Administrative Order on Consent (AOC) on February 18, 1994 for a Partial Site Investigation. The RWQCB issued a No Further Requirements (NFR) letter for the southern half of the property in 1996. Since 1994, the property has voluntarily conducted cleanup concurrent with the work required by the RWQCB for the property located at 2960 North Hollywood Way. The RWQCB issued a Cleanup and Abatement Order (CAO) for the 2960 North Hollywood Way property in 1992.

STATE AND TRIBAL REGISTERED STORAGE TANK LISTS (UST)

A review of the UST list indicates there is one site located within 1/8 to 1/4 mile at a lower elevation than the Site.

California Facility Inventory Database (FID) UST

A review of the CA FID UST list indicates that the PAC facility located at 2940 North Hollywood Way is also identified in this database for having registered USTs.

HISTORICAL UST

A review of the Historical UST list indicates there are three sites located within 1/8 and 1/4 mile of the Site. One is located at a higher elevation and 2 are located at a lower elevation from the Site.

STATEWIDE ENVIRONMENTAL EVALUATION AND PLANNING SYSTEM (SWEEPS UST)

A review of the SWEEPS UST list indicates there are 5 sites located within 1/8 and 1/4 mile of the Site. Two are located at a higher elevation and 3 are located at a lower elevation from the Site.

DEED

A review of the DEED list identifying properties with land use restrictions indicates there is 1 site located within 1/2 mile of the Site at a lower elevation.

CONSENT and Record of Decision (ROD)

A review of the CONSENT list for properties with legal settlements establishing standards for cleanup at NPL sites identified the San Fernando Valley (Area 1) North Hollywood Wellfield located within 1/8 mile of the Site. This property has been previously discussed in other databases above and is also identified in the Record of Decision (ROD) list, with ROD documents mandating a permanent remedy at an NPL site and containing technical and health information to aid the cleanup.

CALIFORNIA BOND EXPENDITURE PLAN

A review of the CA Bond Exp. Plan list indicates there is one property located within 1 mile of the Site at a lower elevation with a site-specific expenditure plan for an appropriation of Hazardous Substance Cleanup Bond Act funds.

CORTESE

A review of the CORTESE list also listed the San Fernando Valley (Area 1) North Hollywood Wellfield due to it being identified in the LUST and Cal-Sites databases.

HISTORICAL CORTESE

A review of the HISTORICAL CORTESE list indicates there are 14 properties located within 1/2 mile of the Site. Three sites are located equal and higher elevations than the Site and 11 sites are located at lower elevations.

DRYCLEANERS

A review of the DRYCLEANERS list indicates there are 3 properties located within 1/4 mile of the Site at lower elevations.

WELL INVESTIGATION PROGRAM (WIP)

A review of the WIP list indicates there are 36 properties located within a ¼ mile radius of the Site. Fifteen sites are located at equal and higher elevations than the Site and 21 sites are located at lower elevations.

HAZARDOUS WASTE PERMITS (HWP)

A review of the HWP list indicates there are 2 properties located within ½ mile of the Site at lower elevations. This database contains information on permitted hazardous waste facilities and cleanups.

EDR HISTORICAL AUTO STATIONS

A review of the EDR Historical Auto Stations list indicates there are 2 auto station properties located within 1/4 of a mile of the Site at lower elevations.

EDR HISTORICAL CLEANERS

A review of the EDR Historical Cleaners list indicates there is 1 property located within ¼ mile of the Site at a lower elevation.

Orphan Sites

The EDR search identified 12 orphan sites, which are listed in the EDR Reports. Orphan sites are sites with insufficient address information that can only be identified within the zip code, city, or county of the site.

4.3 HISTORICAL TOPOGRAPHIC MAPS

Historical topographical maps were obtained from EDR for the years 1900, 1901, 1902, 1926, 1941, 1966, 1972, and 1994. A copy of the EDR topographical maps are presented in **Appendix B**. Information obtained from review of individual maps is provided in the following subsections:

- **1900** - The map shows the Site to be partially developed in the city of Burbank. Small structures are seen in the near vicinity of the Site, but no structures are present at the Site. The Southern Pacific Railroad is apparent east of the Site. The Verdugo Mountains are depicted north of the Site.
- **1901** – This map appears similar to the 1900 map, with no structures identified at the Site.

- **1902** – This map is similar to the 1900 and 1901 maps.
- **1926** – The map continues to show partial development near the vicinity of the Site. No structures are depicted at the Site. The Southern Pacific Railroad is evident northeast of the Site. Hollywood Way is evident east of the Site. Partial development of present-day Tulare Avenue is depicted east of the Site and intersecting with Hollywood Way. A cemetery is labeled southwest of the Site.
- **1941** – Coverage of the Site was not included on the map provided from 1941.
- **1966** – Two buildings are depicted at the Site. Two long buildings are shown in the adjacent area south of the Site, with larger buildings depicted further south. Additional buildings are evident north, south, and east of the Site. Lockheed Air Terminal is represented on this map south of the Site. The Interstate 5 (I-5) Golden State Freeway is evident north of the Site. Tulare Avenue is depicted east of the Site intersecting with Hollywood Way. Built-up areas are evident north of the Site beyond the Southern Pacific Railroad, south of the Site beyond Winona Avenue, and east of the Site beyond the I-5 Freeway.
- **1972** – The Site and adjacent areas appear unchanged in comparison to the 1966 map. Three additional buildings appear in the lot located southeast of the Site below Tulare Avenue. The name of the Lockheed Air Terminal located south of the Site has been changed to Hollywood-Burbank Airport. Additional buildings are also evident further southwest of the Site beyond the Hollywood-Burbank Airport.
- **1994** – The Site and adjacent areas appear unchanged in comparison to the 1972 map. The name of the Hollywood-Burbank Airport located south of the Site has been changed to Burbank-Glendale-Pasadena Airport.

4.4 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs (EDR Aerial Photograph Report) for the Site and surrounding area were reviewed for the years 1928, 1938, 1956, 1965, 1976, 1989, 1994, 2002, 2005. A copy of the EDR Aerial Photograph Report is presented in **Appendix C**.

- **1928** – The Site property is visible as undeveloped rangeland. There is developed farmland in the immediate vicinity east of the Site and a farmhouse with associated structures to the immediate southwest. The location of the Southern Pacific Railroad as depicted in historical topographic maps is apparent north of the Site.
- **1938** - The Site is still visible as undeveloped rangeland, with developed farmland to the east and the farmhouse with associated structures to the southwest also present. Evidence of a developed airfield with associated support structures is present to the west and southwest of the Site.
- **1956** – The Site property is developed with two structures where the engine test cells were located as seen today. There also appears to be more structures and signs of activity east of the test cells. The areas surrounding the Site appear to be fully developed. Manufacturing facility structures were viewed to the immediate north and south of the Site that appear to be associated with the aircraft/aerospace industry. An airport where the present-day Burbank-Glendale-Pasadena Airport is located is evident west and south of the Site. These three properties appear to be somewhat contiguous. Hollywood Way located east of the Site appears fully developed with 4 lanes. Present-day Tulare Avenue appears as an undeveloped road intersecting with Hollywood Way.

- **1965** – The Site property appears unchanged from the 1956 photograph. However, there appears to be an increase in building structures in the surrounding vicinity that have taken the place of the parking lots in the 1956 photograph. The I-5 Freeway is evident northeast of the Site.
- **1976** – There appear to be no changes to the Site or surrounding vicinity.
- **1989** – There appear to be no changes to the Site or surrounding vicinity.
- **1994** – There appear to be no changes to the Site or surrounding vicinity.
- **2002** – The ground surface immediately west of the test cells at the Site appears to have been disturbed in this photograph. There also appears to be two less buildings. In addition, the facilities north and south of the Site appear to have been demolished since the 1994 photograph was taken.
- **2005** – The subject Site appears unchanged. The immediate area surrounding the Site also appears relatively unchanged except for additional parking that is evident.

4.5 CITY DIRECTORY

Historic uses of the Site and adjacent areas were investigated by reviewing historical city directories. City directories provide information on previous businesses at street addresses at or near the Site. The City Directory coverage for the Site is presented below. A copy of the City Directory Abstract is included in **Appendix D**.

- 1985 – Caterpillar Corp. and Cates BI
- 1970 – Pacific Airmotive (Engine Test Facility)

4.6 SANBORN® MAPS

EDR conducted a search to identify Fire Insurance (Sanborn®) Maps for the Site and surrounding area. Sanborn® Maps from 1953, 1954, 1956, 1960, 1966, 1968, and 1969 were reviewed for the Site. A copy of the EDR Sanborn® Report is included in **Appendix E**.

- **1953** – Two motor testing buildings are identified at the Site where the present-day Engine Test Cell building and its associated control room are located. There is a large “Employee Parking Lot” identified east of present-day Engine Test Cell building. There are 3 smaller structures identified immediately west of the present-day Jet Engine Test Cell building identified as 1) “Canteen”, 2) “Switch No.” and 3) “Elec. Maint.”. There is an unidentified dashed square area marked located west of the Jet Engine Test Cell. The property immediately south of the Site at 2945 North Hollywood Way is identified a PAC property (labeled as conjoining with the Site) and identified as “Aircraft Overhauling”. There are blast fences indicated on the north and south sides of the Site as well as on the south side of the Aircraft Overhauling property. On the inside of the blast fence between the Site and the Aircraft Overhauling property is a concrete drain. The building north of the Site is labeled as “Experimental Shop” and is also surrounded by blast fencing on its north, south, and east sides. North Hollywood Way and West Tulare Avenue are evident on this map. The PAC facility located at 2940 North Hollywood Way facility is depicted southeast of the Site. Various small manufacturing shops including machine shops and assembly, office, novelty manufacturing, pottery manufacturing, and metal production assembly are depicted immediately east of the Site across North Hollywood Way.

- **1954** – This map appears unchanged in comparison to the previous map.
- **1956** – This map appears unchanged in comparison to the previous map.
- **1960** – This map appears unchanged in comparison to the previous map.
- **1966** – This map appears unchanged in comparison to the previous map.
- **1968** – This map appears unchanged in comparison to the previous map.

4.7 OTHER HISTORICAL RECORDS

According to the ASTM Standard Practice E 1527-05, other historical sources should be considered when evaluating Site historical uses. Other historical records for the Site were obtained from the internet, when and if available. MWH also obtained historical records from the GE KOP office. In addition, on April 15 and 20, 2011, MWH visited the Burbank Fire Department to obtain any available records regarding USTs at the Site. These historical records are provided in **Appendix G**.

According to a draft memo from Ed Firestone and Sharon Eckard to Bill Killoran dated May 12, 1997, in 1985, UNC purchased properties located at the Site and at 2940 North Hollywood Way as part of a business acquisition from Purex Industries. In 1980 to 1981 before UNC's acquisition, Lockheed acquired the property at 2960 North Hollywood Way from a subsidiary of Purex Industries. A limited partnership purchased the 2960 property from Lockheed in 1981. Lockheed agreed to lease it back until 2006. The Site is located across the street from the properties at 2940 and 2960 North Hollywood Way. In prior years, each of these properties were places of business for PAC and its predecessors which had been in business since 1928. PAC serviced aircraft and aircraft engines, and predecessor corporations were also involved in these operations. According to the memo, the Site consists of approximately 15,000 sf and was used from 1947 through 1996.

According to a Phase II Detailed Site Assessment Report by Kennedy/Jenks Engineers (KJE) dated April 12, 1985, seven soil borings were completed to estimate the horizontal and vertical extent of jet fuel in areas previously found to contain jet fuel in the soil based on shallow trenches as referenced in a KJE Phase I report dated December 11, 1984. Four vertical borings were completed near a location designated as G4, and three slant borings were completed adjacent to Test Cell No. 4 (**Appendix G**). Vertical borings near the location of G4 and Boring 1 indicated that jet fuel appeared to be localized in this area. An abandoned, buried pipeline that at one time served as a fuel supply return line from the pump station and was found to terminate near G-4 was deemed as the probable source of jet fuel in this area. Jet fuel in soil was found in a zone approximately 20 feet thick below the 5-foot depth at which the pipeline was found. Laboratory analysis of soil samples confirmed the presence of jet fuel underneath the pump and power stations, with the highest concentrations found at slant Boring 7. Similarly, soil samples from Boring 5 beneath the sump showed a decrease in concentration to the north of Boring 7. Based on slant boring results, 25 to 30 feet below ground surface (bgs) appeared to be the extent of vertical penetration of jet fuel near the eastern wall of Test Cell No. 4. Soil samples at these depths were located under the building. A comparison of boring logs in the area showed the underlying soil formation to be relatively homogeneous. Thus, the vertical extent of jet fuel migration directly under the former pump station was estimated to likely be 25 to 30 feet. To minimize the further spread of jet fuel, PAC proposed to excavate soil in two areas, Area 1 and Area 2, where elevated jet fuel concentrations were found. Area 1, encompassing the end of the abandoned, buried pipeline, was proposed to be excavated to 25 feet. Area 2, the former

location of the fuel pump and power station, was proposed to be excavated to an initial depth of 25 feet, with the final depth not extending below 30 feet.

Kennedy/Jenks/Chilton (KJC) prepared a PAC Facility Assessment Workplan (Workplan) dated February 22, 1989 to complete an evaluation of areas at PAC's facility where chemicals of concern may have been released to subsurface soils during their storage or handling. According to the Workplan, on October 23, 1984, a jet fuel spill east of Test Cell No. 4 was reported by Airwork Corporation, the previous owner of PAC, to the Regional Water Quality Control Board (RWQCB). According to a memo from May 12, 1997, 3,300-gallons of jet fuel were lost from an improperly abandoned bleed off line. PAC retained KJC to confirm and investigate the suspected leakage. A Site investigation identified a fuel supply line as the probable source of jet fuel in the soil. The piping appeared to have been associated with two USTs which were removed in December 1983. The piping was capped and a new fuel supply line was rerouted above ground. As part of the investigation, eight soil borings were drilled in the vicinity of the jet fuel spill. According to the Workplan, two areas containing high jet fuel concentrations were identified and remediated by excavating soils to approximately 25 to 30 feet bgs, respectively, and backfilling the excavations with clean fill material. The area was then capped by resurfacing with asphalt. In addition to the eight soil borings, two monitoring wells (MW-1 and MW-2) were drilled in July 1987 to depths of 215 feet bgs to monitor groundwater for the presence of jet fuel.

The Workplan also included visual inspection of Sump No.1 by Test Cell No. 4 in August 1988. According to the Workplan, there were nine USTs formerly located at the Site (Tanks A through I). The Workplan included the drilling of two exploratory borings at the Site, SB-17 and SB-18, to evaluate the area occupied by six of the nine former USTs (Tanks D through I). Locations formerly occupied by Tanks A through C were remediated during the cleanup of the jet fuel spill. Soil boring SB-17 was drilled southwest of Test Cell No. 4 in the vicinity of a former underground waste oil tank (Tank I). As reported by PAC, this tank had a nominal capacity of 500-gallons, and contained waste oil from jet engines being repaired and tested by PAC. According to PAC records, Tank I was installed between 1947 and 1948 and removed in 1983. Soil boring SB-18 was drilled southeast of Test Cell in the vicinity of Tanks D through H. According to PAC records, these tanks had nominal capacities ranging from 1,000- to 10,000-gallons and contained aviation gas (AVGAS). PAC records indicate that the USTs were installed between 1947 and 1984. The records also indicate that Tanks E through H were removed in 1970 and Tank D was removed in 1983. In addition to these nine USTs, the Workplan indicated that one operating 20,000-gallon jet fuel UST was located at the Site south of Test Cell No. 4 (Tank 1). This tank was used to supply jet fuel to engines during performance testing conducted in the test cells.

A KJC Overall Site Assessment Report dated July 5, 1989, summarized the results of the soil investigations performed as part of the 1989 Workplan. Analysis of the soil samples collected beneath the excavated area indicated that jet fuel was present beneath the bottom of one excavation. Jet fuel concentrations in soil ranged from 10,000 milligrams per kilogram (mg/kg) at the base of the excavation to 4,000 mg/kg at a depth of 75 feet in soil boring B-8. Jet fuel was not detected at concentrations greater than method detection limits at depths of 79 and 83 feet bgs. At the request of the RWQCB, two monitoring wells, MW-1 and MW-2, were installed in June 1987 to provide data collection points for the evaluation of the potential impact of the jet fuel release in the underlying groundwater. Both wells were drilled to depths of 215 feet bgs and sampled on a semi-annual basis until June 1989. Total Petroleum Hydrocarbons (TPH)-gasoline, diesel fuel, and jet fuel were not detected in groundwater samples collected during the

four semi-annual sampling events. Trichloroethene (TCE) and PCE were detected in all samples collected in both wells. RWQCB requested that well MW-1 and MW-2 remain intact to provide data points for an on-going remedial investigation of TCE and PCE in the groundwater basin that underlies the Burbank area (San Fernando Valley Superfund Site). Investigation of Sump No. 1 adjacent to Test Cell No. 4 indicated that Sump No. 1 served as a reservoir for recirculating water and did not represent the potential to receive solvents or fuels handled at the Site. It was not sampled or investigated. Boring SB-17 located in the vicinity of former waste oil tank, Tank I, was drilled to a depth of 40 feet bgs. SB-18 was drilled to a depth of 50 feet bgs in the vicinity of former AVGAS Tanks D through H. Samples from SB-17 were analyzed for VOCs and TPH. Samples from SB-18 were analyzed for toluene and TPH. The only chemical detected from soil samples collected from SB-17 and SB-18 was toluene. Concentrations ranged from 0.006 mg/kg at a depth of 10 feet to 0.062 mg/kg at a depth of 7.5 feet in SB-17, and 0.002 mg/kg at a depth of 20 feet to 0.034 mg/kg at a depth of 5 feet in SB-18. These results indicated that a significant leakage had not occurred from the former tanks. Two soil borings were sampled by Environmental Solution, Inc. as part of the installation of a leak detection system for the one UST remaining at the Site (Tank 1). Preliminary sampling results indicated that leakage had not occurred from Tank 1.

According to the Well Investigation Program – Hydrogeologic Investigation prepared by KJC and dated June 10, 1992, two USTs used for jet fuel storage were removed from the paved area east of Test Cell No. 4. According to this document, previous investigations conducted at the Site included drilling 12 soil borings and installing groundwater monitoring wells MW-1 and MW-2. These borings and the two monitoring wells were installed in 1986 to 1987 during the investigation of the jet fuel release from UST piping. The other borings were drilled to evaluate the subsurface soils in the vicinity of the former and existing USTs. Chemicals detected in soils samples from the borings included TPH-jet fuel, toluene, acetone, and methylene chloride. In general, toluene and TPH-jet fuel were the chemicals most often detected at the Site. According to the report, acetone was detected at a low concentration at 40 feet bgs. Toluene was detected at depths up to 50 feet bgs. The concentrations generally decreased with depth. TPH-jet fuel was detected up to 74 feet bgs and these detections were apparently due to the jet fuel release from tank piping. Remedial efforts consisted of PAC excavating affected soils down to 30 feet bgs, under direction of RWQCB, to remove soil containing fuel. No further soil studies with respect to the jet fuel spill at the Site were recommended by RWQCB.

During the Well Investigation Program, KJC designed and completed the construction and development of six (6) new groundwater monitoring wells at the Site (MW-3) and at the former PAC property at 2940 North Hollywood Way. MW-3 was constructed at the Site to an approximate total depth of 285 feet bgs to provide data in addition to existing wells MW-1 and MW-2. The five remaining new wells (MW-4 through MW-8) were constructed at the facility located at 2940 North Hollywood Way. No chemicals of concern were identified in the chemical analyses of soil samples collected from MW-3 through MW-8. The only chemicals of concern found in the groundwater were PCE and TCE. January 1992 concentrations of PCE ranged from 35 microgram per liter (ug/L) (MW-3) to 710 ug/L (MW-7). March 1992 concentrations of PCE ranged from 44 ug/L (MW-3) to 1,600 ug/L (MW-5) and the March 1992 TCE concentrations ranged from 13 ug/L (MW-3) to 490 ug/L (MW-6). It was concluded from the chemical analysis of groundwater samples collected from the six new groundwater monitoring wells and the one additional monitoring well located near PAC's northeast corner on Lockheed Property that additional samples needed to be collected and analyzed before basic conclusions on groundwater quality beneath the PAC facilities could be presented. No chemicals of concern were identified in soil samples analyzed during the study. Therefore, according to the 1992 KJC

Well Investigation Program Hydrogeologic Investigation, no evidence was found to suggest that chemicals from previous documented releases at PAC's Burbank facilities had affected groundwater quality underlying the Site and other PAC facilities.

Sometime during 1993, the RWQCB requested PAC to perform quarterly groundwater sample collection and analysis, monthly groundwater level monitoring, reporting of quarterly activities at the Site and the PAC property at 2940 North Hollywood Way, and sampling of monitoring wells MW-3 through MW-8, from April 1993 through January 1994.

In February 1994, PAC received an AOC from the USEPA, which required PAC to perform partial remedial investigation, initiating activities necessary to determine the nature and extent of vapor and non-vapor phase contamination in unsaturated zones resulting from releases of hazardous substances at the Site and at the 2940 North Hollywood Way location. Both the horizontal and vertical extents of contamination were to be determined, and PAC was to continue groundwater monitoring.

The Partial Remedial Investigation Report, prepared by KJC on September 9, 1994 from UNC/PAC to the USEPA, stating that UNC/PAC did not use solvents (assumed to refer to chlorinated solvents) was not available for review. However, according to a December 5, 1994 letter from the USEPA to UNC/PAC, USEPA agreed to defer soil gas investigations at the Site based on UNC/PAC's assertion that solvents (chlorinated) were not used at the 3003 Hollywood Way Site.

According to a Closure Report prepared by Aman Environmental Construction, Inc. (AECI) dated November 12, 1998, tank removal and backfilling activities were performed at the Site and at the PAC property located at 2940 North Hollywood Way. AECI initiated the UST removal on September 9, 1998. The 20,000-gallon UST was removed from the excavation on September 10, 1998 and excavated soils did not exhibit any signs of soil contamination. According to the report, the concrete pad below the 20,000-gallon UST at the Site was not removed because of concern arising from a high-pressure fire suppression water line which passed through the excavation area. Excavation activities exposed this line and left it unsupported at a point where 2 pipe sections were joined. Although this line was temporarily shut down during tank removal, the concern was that the line was old and may break at the joint or rupture due to heavy vibration during concrete breaking activities. Soil samples were collected around the perimeter of the tank pad at the Site but additional samples were required to be taken in the area to ensure adequate tank bottom coverage. Five samples were collected from the perimeter of the tank pad at the Site. AECI collected samples from soil stockpiles to effectively characterize excavated soils. Analytical results for samples collected from the stockpile at the Site indicated all analyte concentrations were less than regulatory levels for classification as hazardous waste. Upon review of analytical results from the stockpile at the Site, AECI was authorized to backfill the excavation using previously excavated soils. Additional fill material was imported from a crushed aggregate stockpile located at the former Lockheed facility directly adjacent to the Site. An asphaltic concrete (blacktop) cap was placed over the backfilled area at the Site to match existing conditions.

On April 15, 2011, MWH reviewed files from the Burbank Fire Department regarding the Site. A Hazardous Materials Inventory with a signature date of August 28, 1992 indicated that the following hazardous materials were stored for use in Test Cells Nos. 3 and 4:

Material	Container	Maximum Amount (gallons)
Jet A Fuel	UST	12,000
Stoddard Solvent	Drum or barrel	55
Turco Airtech #23	Drum or barrel	30
Bellsol III Denatured Ethyl Alcohol	Drum or barrel	40
Brayco 46	Metal container	10
Exxon Turbo Oil 2380	Metal container	198

A Settlement Agreement and Complete Mutual Release was prepared and became effective as of 4 March, 1998, by the Lockheed Martin Corporation and UNC Incorporated, UNC Pacific Airmotive Corporation, Inc. and UNC Airwork Corporation. The parties mutually agreed on a payment by UNC, which addressed UNC's potential responsibility for past and future response costs for groundwater contamination associated with the Burbank Operable Unit (BOU). The agreement also addressed UNC's sole responsibility for soil investigation and/ or soil remediation, if necessary (GE, 1998). In 1997 GE acquired an entity, which subsequently acquired the corporate parent of UNC Pacific Airmotive Corporation, Inc. (PAC). Consequently PAC is now an indirect, wholly-owned subsidiary of GE.

On October 20, 2005, USEPA requested PAC perform quarterly groundwater sampling at the eight existing wells within the PAC properties (including MW-3) (USEPA, 2005). The Lockheed Martin Corporation (LMC) performed the groundwater work based on the settlement agreement between PAC and LMC. In addition to VOCs, the list of groundwater analytes expanded to include emerging chemicals such as hexavalent chromium, 1,2,3-trichloropropane (1,2,3-TCP) and 1,4-dioxane (Tetra Tech, 2010).

According to the 2011 Tetra Tech Semiannual Groundwater Monitoring Report for the fourth quarter 2010 and first quarter 2011, groundwater wells located at the Site include MW-1 through MW-3. Other wells at adjacent former UNC address are MW-4 through MW-8. During the fourth quarter 2010, MW-1 and MW-2 were not sampled because they were dry. The wells have been dry since LMC began monitoring them in March 2006 (Tetra Tech, 2011). Groundwater elevations in wells MW-3 to MW-8 have decreased from the fourth quarter of 2009 to the fourth quarter of 2010. These changes in groundwater elevation have ranged from 0.84 to 1.31 feet.

A summary of the analytical results from the fourth quarter 2010 groundwater monitoring event in comparison to their respective water quality objectives (WQOs) is presented in the 2011 Semiannual Groundwater Monitoring Report. The WQOs are based on the chemical's federal or state drinking water standards (whichever is lower).

During the fourth quarter 2010 monitoring event, carbon tetrachloride was detected in samples collected from MW-4, MW-6, and MW-8 at concentrations ranging from 0.65 µg/L (MW-8) to 1.7 µg/L (MW-6), all above the WQO of 0.5 ug/L.

Chloroform was detected in all six groundwater monitoring wells at concentrations ranging from 1.0 µg/L (MW-7) to 6.3 µg/L (MW-6), but concentrations did not exceed the WQO.

1,2-Dichloroethane (1,2-DCA) was detected in samples collected from four groundwater wells (MW-3, MW-5, MW-6, and MW-8) at concentrations ranging from 0.35 J µg/L (MW-5) to 0.68 µg/L (MW-6). Concentrations of 1,2-DCA were above the WQO of 0.5 µg/L in MW-6.

1,1-Dichloroethene (1,1-DCE) was detected in samples collected from all six groundwater wells at concentrations ranging from 1.1 µg/L (MW-5) to 3.4 µg/L (MW-6), but concentrations did not exceed the WQO.

PCE was detected in samples collected from all six groundwater wells at concentrations ranging from 40 µg/L (MW-7) to 67 µg/L (MW-6). TCE was detected in samples collected from all six groundwater wells at concentrations ranging from 13 µg/L (MW-7) to 36 µg/L (MW-6). PCE and TCE were detected above their WQOs of 5 µg/L in all six wells.

1,1,2-Trichloro-1,2,2-trifluoroethane was detected in samples collected from all six groundwater wells at concentrations ranging from 3.8 J µg/L (MW-5 and MW-7) to 6.6 J µg/L (MW-3) but concentrations did not exceed the WQO.

1,2,3-TCP was detected above its WQO of 0.005 µg/L in samples collected from all six groundwater wells at concentrations ranging from 0.27 µg/L (MW-7) to 3.8 J µg/L (MW-3).

1,4-Dioxane was detected above its WQO of 1.27 µg/L in the samples collected from MW-8 at a maximum concentration of 1.1 J µg/L. (The other detection of 1.0 J µg/L was a duplicate sample collected at MW-8.). (Tetra Tech, 2011).

Hexavalent chromium was detected in all six groundwater monitoring wells at concentrations ranging from 1.3 µg/L (MW-8) to 3.0 µg/L (MW-6). Hexavalent chromium was not detected above its WQO.

Nitrate as nitrogen was detected above its WQO of 10 mg/L in all six groundwater monitoring wells at concentrations ranging from 15 mg/L (MW-7) to 17 mg/L (MW-3 and MW-6).

4.8 SITE RECORDS

Reports were provided by the GE KOP office regarding potential environmental impacts at the Site. Additionally, MWH obtained records regarding any USTs from the Burbank Fire Department.

5.0 SITE RECONNAISSANCE

The objective of the site reconnaissance was to obtain information that may indicate the likelihood of identifying a REC in connection with the Site. This section provides observations from the property reconnaissance conducted on February 28, 2011 by MWH representative Rovelie Banzuela, a qualified Environmental Professional. During the reconnaissance, MWH observed buildings and structures on the Site, and viewed adjacent properties. During the site reconnaissance, MWH was accompanied by Dan Hall, President and Owner of B.L. Hall, Inc, and Mike Hoehn, Field Technician for B.L. Hall, Inc. Photographs taken during the site visit have been included in the photographic log in **Appendix F**.

This section of the report also discusses specific topics relative to the Site which are to be included in a Phase I ESA. These include the physical Site setting, water supply, waste generation, etc. Some topics not required in the ASTM Standard Practice E 1527-05 are also included such as asbestos containing materials, ozone depleting substances, and radioactive materials.

5.1 SITE OBSERVATIONS

The Site is 0.69 acres in size and is currently vacant. The Site is accessed via Hollywood Way. MWH observed the following structures at the Site: two buildings containing control rooms and engine test cells, a fenced area containing ASTs, a loading dock, one sump, two clarifiers, and three monitoring wells.

Buildings at the Site are constructed of concrete and cinderblock. The Jet Engine Test Cell Building on the west side of the Site is comprised of a maintenance shop, four adjoining jet engine test cells and associated control rooms. The Engine Test Cell and its associated control room are located on the northeast side of the Site contained. Remaining equipment in the control room consists of the frame of a control station, electrical equipment, and shelving. Drop-in ceiling tiles and fluorescent lights were observed in the ceiling of the control room. Ceiling tiles and plastic were observed on the concrete floor. An exhaust tube and hoisting equipment exist in the engine test cell. Oily stains were observed on the exhaust tube, associated equipment, and on the floors of the engine test cell. Lamps along the walls of the room still exist in the engine test cell. A fire suppression room is located west of the control room. Fire suppression piping was observed in the room. Debris and dirt was present on the concrete floor. A room with fuel piping exists above the engine test cell and fire suppression room. Turned over metal shelves, lights, a dry transformer, electrical equipment, and an old Hobart generator were observed in the room.

The Jet Engine Test Cell maintenance shop is located on the south end of Test Cell No. 1 and consists of a small room with 12 inch by 12 inch red floor tile, and an adjacent larger room containing shelving, electrical panels, and hanging overhead lights. At the time of the site visit, bees were observed clustering around an electrical conduit on the outside of the maintenance shop. Rust stains were also observed on the outside wall of the maintenance shop. A storm drain was observed at the entrance of Test Cell No. 1. The southern portion of Test Cell 1, which is open to the sky, had chain link fence spanning the overhead opening. Oil-stained baffles and an exhaust tube were observed in this area.

The rest of the Jet Engine Test Cell has concrete floors, with some floors coated in epoxy. Most of the equipment in the four jet engine test cells has been removed except for the baffles and

supporting structures for exhaust tubes. Oil was observed coating the baffles and remaining equipment within the jet engine test cells. Drop-in ceiling tiles were observed in the two control rooms in the Jet Engine Test Cell. A men's restroom was observed in the south half of the control room between Test Cell Nos. 1 and 2. Electrical equipment and a water heater were observed above men's restroom. A painted concrete floor was observed in this area. A punch card holder and a time clock were present on the west wall of this control room. In the north half of the control room, a mercury switch was observed on the wall. An emergency shower room with a floor drain was also observed in the northeast corner of this area. Trash and oil staining were observed in the southeast corner of this room. The west wall was observed to be partially broken revealing the presence of a door behind the wall. An empty room north of jet engine Test Cells Nos. 1 and 2 were observed with only a few electrical panels and lights remaining. Water puddles were observed on the concrete floor. Graffiti was observed on the walls in this room. An uncovered outdoor area was observed on the northwest corner of the Site. Concrete pads and rocks were observed on the ground in this area. Palm trees were also observed in this area. In the northern area of the control room between Test Cell No. 3 and Test Cell No. 4, a mounted Veeder Root system was observed on the south wall. Control station framing was observed in the control room.

South of the Jet Engine Test Cell building, a fenced area containing two tanks mounted on a concrete pad and 1 feet-high berms was observed. Some cracks were observed in the concrete but no staining was noted. The area was overgrown with grass and weeds. The area was surrounded by a chain link fence. Signs indicating previous contents of the tanks were not observed. A dumpster containing asphalt rocks, concrete, steel piping, and other miscellaneous debris was observed adjacent to the fenced area.

A loading dock was observed connecting the buildings on the north side of the Site. Old tanks on a concrete pad were observed on the ground level of the loading. Signs indicating prior contents of the tanks were not observed. A Gardner Denver Compressor was observed on the ground level beneath a corrugated steel canopy. Staining was not observed around the compressor. Overgrowth of vegetation in this area was observed. A chain link fence is located outside of the loading dock to the north. A 5 feet by 5 feet stain was observed outside of Test Cell No. 4 on the loading dock.

Two clarifiers are located in the middle of the Site. At the time of the site visit, water was observed inside the vaults at approximately 6 feet below ground surface. A sump was observed inside a covered storage shed constructed of cinderblock and corrugated steel. The roof was constructed of corrugated steel. Piping to the sump was disconnected. Water at approximately 6 feet bgs was observed in the sump. Three monitoring wells approximately 240 feet deep are located at the Site. According to the Final Groundwater Monitoring Report dated May 2006 prepared by Tetra Tech, Inc., two of the wells, MW-1 and MW-2, have been dry since 1992.

The balance of the Site consists of an asphalt parking area. Significant surface cracking and a number of surficial oil stains were observed in areas of the parking lot.

5.1.1 Surrounding Property

The Site is immediately surrounded by parking lots to the north and east, and asphalt and construction areas to the west and south. Commercial areas are located further east of the Site across North Hollywood Way. According to information from the Los Angeles County Assessor

website, the Site is located in a commercial/industrial area. Small businesses and office buildings are located east of the Site across Hollywood Way.

5.2 PHYSICAL SITE SETTING

This section provides a description of the physical Site setting based on the site reconnaissance, publicly-available information (topographic maps, geologic maps, and documents obtained from the Site contact).

According to EDR, the Site is located at an elevation of 713 feet above mean sea level, based on the United States Geological Survey 7.5-minute quadrangle based on the EDR search location. The general topographic gradient at the Site is to the southeast.

The nearest surface water body is Los Angeles River approximately 4 miles south of the Site. As shown in the EDR Radius with GeoCheck[®] Report, a 100-year flood zone is present within 1 mile southeast of the Site.

According to information obtained from the United States Department of Agriculture Soil Conservation Service, presented in the EDR database report, soils at the Site are classified as Urban Land based on the EDR search location. These are soils with variable textures (sand, silt, clay, gravels, and mixtures of these types) and soils do not meet the requirements of a hydric soil.

EDR conducted a search of federal and state well databases. EDR reported one Federal USGS well within 1 mile south of the Site. Eleven state-listed wells were identified ¼ mile south-southwest of the Site. MWH observed 3 groundwater monitoring wells on the Site.

5.3 WATER SUPPLY

The Site is currently vacant and potable water is not supplied to the Site.

5.4 WASTEWATER DISCHARGES

The Site is currently vacant and there are no wastewater discharges at the Site.

5.5 STORM WATER

Storm water runs off the Site by sheet flow toward the south side of the Site to a storm drain and also east along Tulare Avenue leading to Hollywood Way.

5.6 CHEMICAL MANAGEMENT

Chemicals are not currently stored at the Site. Former halon tanks were observed in the Control Room between Test Cell No. 3 and Test Cell No. 4. According to the Well Investigation Program Hydrogeologic Investigation Report prepared by KJC dated June 10, 1992, chlorinated solvents, AVGAS, jet fuel A, and oil and grease were formerly used and stored at PAC's Burbank facilities. However, the report does not specifically state that chlorinated solvents were used or stored at the Site's address. Furthermore, based on review of the 1992 Hazardous Materials Inventory obtained from the Burbank Fire Department, Jet A Fuel, Stoddard solvent,

Turco Airtech #23, Bellsol III Denatured Ethyl Alcohol, Brayco 46, and Exxon Turbo Oil 2380 were stored in Test Cells Nos. 3 and 4 at the Site.

5.7 UNDERGROUND AND ABOVEGROUND TANKS

Four empty ASTs are present at the Site. Two ASTs are located east of the Maintenance Shop and the other two are located by the loading dock. The contents and volumes of the ASTs by the Maintenance Shop are unknown. The two ASTs by the loading dock have been identified on historical maps as an air receiver and a water tank; however, the volumes of these ASTs are unknown. A sump and two clarifiers are located at the Site east of Test Cell No. 4. At the time of the site visit, water was observed in the sump and the clarifiers at a level of approximately 6 feet bgs.

According to the Workplan prepared by KJC dated February 22, 1989, there were 9 USTs, Tanks A through I, at the Site that were approximately installed between 1947 and 1964, and removed in 1970 or 1983. The capacities of the tanks ranged from 2,500- to 10,000-gallons. The contents of the USTs included jet fuel, gasoline, and waste oil. According to the Workplan, an additional 20,000-gallon UST containing jet fuel was located south of Test Cell No. 4. Based on a PAC letter dated June 13, 1988 to the USEPA, the 20,000-gallon UST was installed in 1980. According to the KJC Overall Site Assessment Report dated July 5, 1989, this 20,000-gallon UST was designated as Tank 1. Figure 1-4 from the KJC Overall Site Assessment report dated July 5, 1989 presents the locations of the USTs.

MWH contacted the Burbank Fire Department, a second time, and requested review of historical documents related to the former PAC site at 2940 Hollywood Way. This review was performed to obtain documentation of the removal of 9 USTs mentioned in the KJC 1989 Workplan and the 20,000-gallon UST located south of Test Cell No. 4 (Aman, 1998).

Permits for the UST removal were obtained from the City of Burbank, Fire Prevention Bureau (tank removal), the City of Burbank, Community Development Department, Building Division (grading activities), and the City of Burbank, Water Department (fire hydrant use). The report states the UST excavation began on September 9, 1998 and was completed on September 10, 1998.

Further documentation found at Burbank Fire Department included two permits issued to PAC, under the address of 2940 North Hollywood Way. The first permit dated June 24, 1975 for “the temporary abandonment of one 10,000-gallon, one 7,500-gallon, two 4,000-gallon and one 1,000-gallon USTs located south of Test Cell No. 5. This permit is believed to be for UST removals at the Site. Documents that MWH reviewed show the only test cell at the 2940 facility as Test Cell No. 6. Test Cell No. 5 is located at the Site. This permit also included the following statement, “Also included is the 1,000-gallon tank located in the area of solvent storage.” This 1,000-gallon tank is believed to be located at the 2940 facility, as there are no documented solvent storage areas at the Site’s address. The permit was issued for a time frame of one year. A later permit, dated November 4, 1976, for the “removal” of the above mentioned USTs (excluding the 1,000-gallon UST located in the solvent storage area). The permit also stated, “Tank to be purged with dry ice and removed in a manner approved by the Burbank Fire Department”. No other documentation existed on the removal activities. According to an

inspector with the Burbank Fire Department, tank closure reports were not written during that time era.

A Site plan showing existing and future UST locations was also found at the Burbank Fire Department. This drawing is dated January 18, 1960. There is no identification of the drawing being for the Site, although, two Site features, including the roadway and gate leading to the Site and Test Cell No. 4 are shown on the drawing. The four tanks discussed above and referenced on the Burbank Fire Department permit for removal appear to be noted on Table 1 from the KJC 1989 PAC Facility Workplan as Tanks D through G, and are presented as existing in 1960. In addition, three other USTs presented on the KJC table, two 10,000-gallon USTs and one 2,500-gallon UST, presumably Tanks A through C, are shown on the 1960 drawing as future locations. These USTs are presented in the KJC table as installed during the years 1962 through 1964. An additional 10,000-gallon UST is shown on the 1960 drawing near the two 4,000-gallon USTs as an existing location and appears to be Tank H shown on Figure 1-4 of the 1989 KJC Overall Site Assessment Report. A 10,000-gallon UST and a 3,000-gallon UST are shown on the 1960 drawing, but are not called out as existing or future. There has been no documentation found representing the 3,000- or 10,000-gallon USTs as being installed. One remaining tank on the KJC table presented as Tank I, a 500-gallon waste oil tank that was installed approximately between 1947 and 1948, and removed in 1983, is not shown on the 1960 drawing but is, however, presented on Figure 1-4 from the 1989 KJC Overall Site Assessment Report.

A copy of the closure report dated November 12, 1998 and prepared by AECI for the 20,000-gallon UST located south of Test Cell #4 was obtained and is presented in **Appendix G**. According to the AECI Closure Report, the 20,000-gallon UST was removed in conjunction with tank removal and backfilling activities at the PAC property located at 2940 North Hollywood Way. Details of this UST closure are described in Section 4.7.

5.8 WASTE MANAGEMENT

A dumpster containing municipal solid waste is located in the center of the Site. Quality Waste is the solid waste hauler for the Site. In addition, asphalt rocks, concrete, steel pipe, and miscellaneous construction debris were observed in the dumpster adjacent to the fenced area located south of the Jet Engine Test Cell.

Universal wastes observed at the Site included mercury switches and fluorescent light bulbs.

5.9 AIR EMISSIONS

There are no air emission sources at the Site. A small Hobart generator was observed in the room above the engine test cell in Building 2 and a Gardner Denver compressor was located by the loading dock.

5.10 INDOOR AIR AND INDUSTRIAL HYGIENE

Issues related to indoor air or industrial hygiene were not observed during the Site reconnaissance or reported by Site personnel.

5.11 POLYCHLORINATED BIPHENYLS (PCBS)

According to Site contacts, Dan Hall and Mike Hoehn of B.L. Hall, Inc., there are no known PCB-containing equipment onsite. A PCB survey has not been performed at the Site. Electrical poles without transformers were observed at the Site north and south of the Site buildings. Staining or leaking was not observed in the vicinity of the electrical poles.

5.12 ASBESTOS-CONTAINING MATERIAL (ACM)

On April 24, 2003, NATEC International, Inc. (NATEC) performed asbestos sampling at the Site. A total of thirty-six (36) samples were collected from suspect materials. Suspect materials at the Site included:

- Building A (Engine Test Cell) - Wall paint, door packing, ceiling tile, and ceiling tile mastic.
- Building B (Control Room for Engine Test Cell) – No suspect materials accessible or evident.
- Building C (Jet Engine Test Cell) - Boiler jacket, baffle packing, roofing, cooling tower.
- Tool Room (Maintenance Shop) - Floor tile, and wall board.

Laboratory analysis determined that samples from the following areas and materials had detectable and significant asbestos content:

- Building A (Engine Test Cell) – Ceiling tile mastic and roof mastic
- Building C (Jet Engine Test Cell) – Boiler jacket insulation, cooling tower fins and panels, and roof mastic
- Tool Room (Maintenance Shop) – 12” x 12” red floor tile and roof mastic.

A map of sampling locations and building designations was not provided by NATEC in their inspection summary dated May 7, 2003. The inspection summary report is included in **Appendix H**.

On February 28, 2011, ESIS HSE performed a survey of suspect ACMs and interior painted surfaces (potential lead-based paint [LBP]) that may be disturbed by the planned demolition of the Site buildings. The purpose of the survey was to identify ACMs that were not previously sampled, and would require proper removal before commencing demolition activities. Sampling and analysis of paint was conducted to determine proper work practices during construction activities. ESIS HSE did not collect additional bulk samples inside the buildings during the survey as it was determined that the previous survey from 2003 was adequate, and tested all suspect materials observed by ESIS HSE personnel in the field. A copy of ESIS HSE’s Limited Asbestos and Lead-Based Paint Sampling Report dated March 9, 2011 is provided in **Appendix I**.

5.13 OZONE-DEPLETING SUBSTANCES (ODS)

Potential sources of ODSs were not observed at the Site.

5.14 RADIOACTIVE MATERIALS

Radioactive materials are not stored or handled at the Site.

5.15 LEAD BASED PAINT

ESIS HSE performed the LBP survey concurrently with the ACM survey on February 28, 2011. ESIS HSE inspected representative interior areas of homogenous painted surfaces in areas that may be disturbed by the planned demolition. Based on the X-Ray Fluorescence (XRF) tests completed, surfaces inside the Engine Test Cell Control Room and the Jet Engine Test Cell were reported as above the current regulatory limit of 1.0 mg/cm³ and therefore considered LBP by both the U.S. Department of Housing and Urban Development (HUD) and the USEPA.

5.16 ALTA LAND SURVEY

On February 28, 2011, Hennon Surveying & Mapping, Inc., Glendale, CA, performed an ALTA survey at the Site. The survey included spot elevations collected over the Site's fee title parcel, APN 2466-011-013, as well as mapping both the existing traveled path to Hollywood Way and the existing ingress/egress easement. The ALTA survey included the following items; a vicinity map, the fee parcel area, exterior dimensions of the fee parcel buildings at ground level, square footage of exterior footprint of buildings at ground level, building height and improvements, parking, access to a public street, and surface evidence of utilities. The ALTA land Survey report results can be found in the drawing presented in **Appendix J**. A necessary piece of the completion of the land survey required a property title report be completed for the subject property. The Title Report was completed by Stewart Title of California, Inc. and included a Corporation Quitclaim Deed dated July 15, 1983, indicating that Purex Industries, Inc. remised, released, and quitclaimed the Site's APN 2466-011-013 and also the APN 2466-007-031. The Title Report is also presented in **Appendix J**.

5.17 CONCRETE SAMPLING

During MWH's site visit on February 28, 2011 building construction materials (concrete, asphalt and steel) were observed to evaluate whether these media should be sampled and analyzed to characterize these materials for disposal and/or recycling purposes. Based on MWH observations, representative areas of concrete were chosen.

On March 29, 2011, MWH met with representatives from B.L. Hall, Inc. to collect concrete samples from selected locations (**Figure 3**) at the Site. The sample locations were chosen to represent 1) concrete which could have been affected by historic operations at the facility (appearance of oil stains and blast soot, or locations near floor drains), and 2) representative areas deemed unaffected by historic operations at the facility. A total of nine samples were collected from the engine test cells, selected control rooms, and the loading dock. Sample locations included structural walls and floors. Samples were collected by using a portable hand drill equipped with a 3/4-inch diameter bit ranging from 8- to 16-inches in length. The entire cross-section of wall and floor was drilled for collection of a representative composite sample. The drill cuttings from each location were collected and placed into laboratory provided containers. After each sample was collected, the container was placed in a cooler with ice and held under chain-of-custody until signed over to the laboratory courier for same-day transport. A photographic log presenting locations of concrete samples is presented in **Appendix K**.

Calscience Environmental Laboratories of Garden Grove, California was contracted to perform the concrete analyses. Analysis and analytical methods for each sample included the following:

- TPH-gas and diesel – USEPA Method 8015
- Semi-volatile Organic Compounds – USEPA Method 8270
- Polychlorinated Bi-phenols – USEPA Method 8082
- Title 22 Metals – USEPA Method 6010/7470

5.17.1 Concrete Sampling Results

During this sampling event, it was determined that the represented thickness of concrete in the walls was 12-inches, and floors were 8-inches thick. The laboratory analytical report and results are presented in **Appendix L**. A summary of all detections is presented in **Table 5-1**. Metals concentrations detected in the concrete samples did not exceed the total threshold limit concentrations values established in Title 22 of the California Code of Regulations, Section 66261.24 and would not be characterized as hazardous wastes. TPH as gas concentrations ranged from non-detectable to 1,600 mg/kg. The greatest TPH as gas concentration was detected in concrete sample CSTC3-6W. TPH as diesel concentrations ranged from non-detectable to 300 mg/kg, with the greatest concentration detected in concrete sample CSETC-1F. The only SVOCs detected were 2 methylnaphthalene and phenol in sample CSETC-1F at concentrations of 5.8 and 73 mg/kg, respectively.

TABLE 5-1
Summary of Concrete Sampling Analytical Results

Analyte (by Group)	Unit	Soluble Threshold Limit Concentration (STLC)	Total Threshold Limit Concentration (TTLIC)	Total Characteristic Leaching Potential (TCLP)	CSETC-1F	CSETC-2W	CSLD-3F	CSTC-4W	CSCR43-5W	CSTC3-6W	CSTC2-7F	CSCR21-8F	CSTC1-9W

NOTES:

STLC/TTLIC - Used when determining the hazardous waste characterization under California State regulations as outlined in Title 26 of the California Code of Regulations (CCR). When any target analyte exceeds the TTLIC limits the waste is classified as hazardous and its waste code is determined by the compound(s) that failed TTLIC. The results of this analysis can be used to determine if analysis for STLC level is necessary by comparing 10 times the STLC limit to the TTLIC results. If the TTLIC results do not exceed 10 times the STLC limit then normally no further analysis is required.

6.0 INTERVIEWS

The following section presents a summary of who was contacted, their affiliation with the property, and topics discussed.

6.1 PRESENT OWNERS, OPERATORS, OCCUPANTS

PAC owns the Site and contracts B.L. Hall, Inc. to provide caretaking operations at the Site. According to a memo dated October 20, 2003, in 1985, UNC PAC purchased the Site and another nearby site from Purex Industries. According to the memo, the facility was used from 1947 through 1996. Dan Hall, President and Owner of B.L. Hall, Inc., and Mike Hoehn, Field Technician, were interviewed regarding the subject Site and any current or past environmental concerns associated with the Site. According to Mr. Hall, the Site was used for testing turboprop engines. Mr. Hall and Mr. Hoehn did not have any further knowledge of Site operations.

6.2 STATE OR LOCAL GOVERNMENT OFFICIALS

State or local government officials, public authorities, and/or regulatory agencies contacted as part of this Phase I ESA included the Burbank Fire Department.

7.0 FINDINGS AND OPINION

This section of the report identifies known or suspect RECs, historical RECs, and de minimis conditions that may be of interest to the User with respect to the Site. The opinion of the Environmental Professional regarding impact to the Site is also provided.

7.1 RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Site.

7.2 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

This assessment had revealed evidence of historical *recognized environmental conditions* (HRECs) in connection with the Site.

- According to a Technical Memorandum (prepared by MWH on March 20, 2006), in 1984, a jet fuel spill was reported to the RWQCB. Soil was excavated from 2 areas. Samples were collected from a single soil boring to define the vertical extent of the spill. The results indicated the presence of toluene and jet fuel in soils up to 75 feet bgs. Since groundwater was at least 200 feet bgs, it was concluded that the spill would not impact groundwater.

7.3 DE MINIMIS OR OTHER CONDITIONS

De minimis conditions, which generally do not present a threat to human health or the environment, but which could be improved as best management practices, were not observed during the assessment.

The following conditions, not considered RECs, HRECs, or de minimis conditions, were observed during the site visit.

- One 5 foot by 5 foot oil stain was observed outside of Test Cell No. 4 on the loading dock.
- Oil stains were observed on the surface area of the baffles (approximately 157.3 sf) were observed in Test Cell No. 1.
- Oil stains were observed in the Engine Test Cell on the exhaust tube, walls, floor, and other supporting structures.
- Surface stains, each less than 1 sf in size, and cracks in the asphalt, each less than 10 feet with a gap of 1 inch, were observed in the parking lot.
- Debris and trash in piles less than 1 sf in size were observed scattered throughout the buildings.

8.0 CONCLUSIONS

MWH has performed this Phase I ESA in general conformance with the scope of work required by ASTM Standard Practice E 1527-05 and in accordance with our proposal to GE dated January 17, 2011 for the property located at 3003 North Hollywood Way, Burbank, Los Angeles County, California. Exceptions to, or deletions from, this practice are described in Section 1 of this report.

The assessment has revealed a historical *recognized environmental condition* in connection with the Site:

- According to a Technical Memorandum (prepared by MWH on March 20, 2006), in 1984, a jet fuel spill was reported to the RWQCB. Soil was excavated from 2 areas. Samples were collected from a single soil boring to define the vertical extent of the spill. The results indicated the presence of toluene and jet fuel in soils up to 75 feet bgs. Since groundwater was at least 200 feet bgs, it was concluded that the spill would not impact groundwater.

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Site.

De minimis conditions, which generally do not present a threat to human health or the environment, but which could be improved as best management practices, were not observed during the assessment.

The following conditions, not considered RECs, HRECs, or *de minimis* conditions, were observed during the site visit.

- One 5 foot) by 5 foot oil stain was observed outside of Test Cell No. 4 on the loading dock.
- Oil stains were observed on the surface area of the baffles (approximately 157.3 sf) were observed in Test Cell No. 1.
- Oil stains were observed in the Engine Test Cell on the exhaust tube, walls, floor, and other supporting structures.
- Surface stains, each less than 1 sf in size, and cracks in the asphalt, each less than 10 feet with a gap of 1 inch, were observed in the parking lot.
- Debris and trash in piles less than 1 sf in size were observed scattered throughout the buildings.

9.0 DEVIATIONS AND DATA GAPS

The following data gaps were identified during this Phase I ESA:

- The Partial Remedial Investigation Report, prepared by KJC on September 9, 1994 from UNC/PAC to the USEPA, stating that UNC/PAC did not use solvents (assumed to refer to chlorinated solvents) was not available for review. However, according to a December 5, 1994 letter from the USEPA to UNC/PAC, USEPA agreed to defer soil gas investigations at the Site based on UNC/PAC's assertion that solvents (chlorinated) were not used at the 3003 Hollywood Way Site.
- A 10,000-gallon UST and a 3,000-gallon UST are shown on the 1960 drawing from the Burbank Fire Department, but are not called out as existing or future. There has been no documentation found representing the 3,000- or 10,000-gallon USTs as being installed.

The data gaps associated with this Phase I ESA do not currently appear to affect the findings and use of this Phase I ESA for its intended purpose.

GE has requested a focused Phase II ESA soil investigation be completed to provide further certainty, establish baseline conditions and further evaluate potential presence or absence of constituents of concern in the shallow subsurface that may be associated with the potential solvent storage and UST locations. The results of the Phase II investigation will be provided under separate cover.

11.0 SIGNATURE OF THE ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of this part.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the All Appropriate Inquiries in accordance with the standards and practices set forth in 40 CFR Part 312.

Rovelle Banzuela

March 18, 2013

Date

The qualifications of the MWH Environmental Professional who performed this Phase I ESA can be provided upon request.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/31/2010 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SAN FERNANDO VALLEY (AREA 1)</i>	<i>NORTH HOLLYWOOD WELLFIELD - 1/8 (0.000 mi.)</i>		<i>0</i>	<i>8</i>

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 09/30/2010 has revealed that there is 1

EXECUTIVE SUMMARY

CERCLIS site within approximately 0.5 miles of the target property.

<i>SAN FERNANDO VALLEY (AREA 1)</i>	<i>NORTH HOLLYWOOD WELLFIELD</i>	<i>- 1/8 (0.000 mi.)</i>	<i>0</i>	<i>8</i>

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there are 4 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/25/2010 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 02/17/2010 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/17/2010 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/17/2010 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 01/05/2011 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY (AREA 1)	NORTH HOLLYWOOD WELLFIELD - 1/8 (0.000 mi.)		0	8

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 01/05/2011 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY (AREA 1)	NORTH HOLLYWOOD WELLFIELD - 1/8 (0.000 mi.)		0	8

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/08/2010 has revealed that there are 16 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 12/16/2010 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

Other Ascertainable Records

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 10/01/2010 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SAN FERNANDO VALLEY (AREA 1)</i>	<i>NORTH HOLLYWOOD WELLFIELD - 1/8 (0.000 mi.)</i>		<i>0</i>	<i>8</i>

ROD: Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid the cleanup.

A review of the ROD list, as provided by EDR, and dated 06/01/2010 has revealed that there is 1 ROD site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SAN FERNANDO VALLEY (AREA 1)</i>	<i>NORTH HOLLYWOOD WELLFIELD - 1/8 (0.000 mi.)</i>		<i>0</i>	<i>8</i>

CA BOND EXP. PLAN: Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

A review of the CA BOND EXP. PLAN list, as provided by EDR, and dated 01/01/1989 has revealed that there is 1 CA BOND EXP. PLAN site within approximately 1 mile of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 2 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

Summary Details:

Conditions at proposal (October 15, 1984): San Fernando Valley Area I) is an area of contaminated ground water in the vicinity of the North Hollywood section of the City of Los Angeles, Los Angeles County, California. This area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,156 acres, contains trichloroethylene (TCE) and perchloroethylene (PCE), and to a lesser extent, carbon tetrachloride and chloroform, according to analyses conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for TCE and PCE (5 and 4 parts per billion respectively) are exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with TCE/PCE concentrations below the State's guidelines. Status (June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial

Site Description: The North Hollywood Operable Unit (NHO) is one of two geographically-defined operable units within the San Fernando Valley (SFV) (Area 1) Superfund Site. The NHO comprises approximately 4 square miles of contaminated groundwater underlying an area of mixed industrial, commercial, and residential land use in the community of North Hollywood (a district of the City of Los Angeles). The NHO is approximately 15 miles north of downtown Los Angeles and immediately west of the City of Burbank, and has approximate Site boundaries of Sun Valley and Interstate 5 to the north, State Highway 170 and Lankershim Boulevard to the west, the Burbank Airport to the east, and Burbank Boulevard to the south.

The EPA is the lead agency for the current and planned future groundwater remedial activities at the NHO. The EPA's response activities at the NHO are and have been conducted under the authority established in the federal Superfund law, the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, 42 U.S.C. Section 9601 et seq. The lead state agency is the California Department of Toxic Substances Control (DTSC). The Los Angeles Regional Water Quality Control Board (RWQCB) has provided and continues to provide substantial support, particularly with the investigation and cleanup of sources of contamination in the SFV. The expected source of cleanup monies for the NHO is an enforcement settlement with the Potentially Responsible Parties (PRPs). Prior to World War II, most land in the SFV was occupied by farms, orchards, and ranchland. By 1949, after the war, nearly all the land in Burbank and North Hollywood was occupied by housing developments, industrial facilities, retail establishments, and the Burbank Airport.

Accompanying these land use changes in the 1940s was a substantial increase in population and groundwater withdrawals from the SFV. In the 1950s, the North Hollywood, Erwin, Whitnall, and Verdugo Well Fields were constructed by the Los Angeles Department of Water and Power (LADWP) in the North Hollywood area to meet the increasing demand for water. In 1968, groundwater withdrawals from the SFV were reduced to achieve "safe yield" from the basin, and more surface water was imported to the basin from external sources. In 1979, industrial contamination was found in groundwater in the San Gabriel Valley (to the east of the SFV), prompting the California Department of Public Health (CDPH; formerly the California Department of Health Services) to request that all major water providers in the region, including those in the SFV, sample and analyze groundwater for potential industrial contaminants. Trichloroethylene (TCE) and tetrachloroethylene (PCE) were consistently detected in a large number of production wells in the SFV at concentrations greater than Federal and State Maximum Contaminant Levels (MCLs) for drinking water. TCE and PCE were widely used in the San Fernando Valley starting in the 1940s for dry cleaning and for degreasing machinery. Disposal was not well regulated at that time, and releases volatile organic compound (VOC)-contaminated groundwater that extends from the NHO to the southeast. To replace wells within the NHO area contaminated by TCE and PCE, and to provide more operational flexibility for groundwater recharge and pumping in the SFV, LADWP constructed the Rinaldi-Toluca Well Field in 1988 and 1989, and the Tujung Well Field in 1993. Based on the significant levels of groundwater contamination present in the

MAP FINDINGS

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

SFV and the impact of that contamination on numerous municipal water supply wells, EPA added four SFV Sites to the National Priorities List (NPL) in 1986 and defined them as areas of regional groundwater contamination. Three of the four Sites (Areas 1, 2 and 4) are contiguous areas within whose boundaries are well fields that serve the water supply systems for the cities of Los Angeles, Burbank and Glendale. There is a large, continuous plume of groundwater contamination that runs through these three Sites. The fourth Site, Area 3, lies in the Verdugo basin, a geographically separate area of the eastern San Fernando Valley. In the SFV Area 1 Site, located at the upgradient end of the contaminated groundwater plume, the selection and implementation of the initial interim remedy - the Existing NHOU Extraction and Treatment System - for the LADWP's North Hollywood well field was given fast-track status because of the potential for contamination to spread to other well fields and areas of uncontaminated groundwater. In 1986, LADWP completed the Operable Unit Feasibility Study for the North Hollywood Well Field Area of the North Hollywood-Burbank NPL Site, which was the basis for selection and implementation of the Existing NHOU Extraction and Treatment System. The 1987 Record of Decision (ROD) for the Site selected the Existing NHOU Extraction and Treatment System as an interim groundwater containment remedy. In 1989, LADWP constructed the Existing NHOU Extraction and Treatment System with financial support from EPA. The Existing NHOU Extraction and Treatment System consists of eight groundwater extraction wells (NHE-1 through NHE-8), an air-stripping treatment system to remove VOCs from the extracted groundwater, activated carbon filters to remove VOCs from the air stream, and ancillary equipment. The treated groundwater is discharged into an LADWP blending facility where it is combined with water from other sources before entering the LADWP water supply system. The Existing NHOU Extraction and Treatment System commenced operation in December 1989 and remains in operation today. In 1989, EPA issued a ROD for the Burbank OU (BOU) of the SFV Area 1 Site. That ROD also selected an interim remedy (containment) for the VOC-contaminated groundwater within the Burbank area, where ten of the city's water supply wells had been shut down due to contamination. The BOU remedy, which provides treated water for the City of Burbank's water supply system, began operation in 1996 and remains in operation to this day. In December 1992, a remedial investigation (RI) for the SFV groundwater basin, including installation and subsequent regular monitoring of 84 groundwater wells, was completed under a cooperative agreement between EPA and the LADWP. The RI was conducted to evaluate the groundwater quality throughout the SFV basin and assist in identifying the best treatment method(s) and optimal locations to install groundwater treatment systems to address the SFV groundwater contamination. EPA listed the SFV Sites as groundwater only, with the intent to focus on addressing the regional groundwater contamination, with an agreement with the state agencies to address the sources. From the late 1980s to late 1990s, EPA provided funds to RWQCB to conduct assessments of facilities in the SFV to determine the extent of solvent usage and to assess past and current chemical handling, storage, and disposal practices. These investigations were conducted pursuant to RWQCB's Well Investigation Program and resulted in source remediation activities under RWQCB oversight at several facilities within the SFV, including two within the NHOU. Source investigations and remediation activities are currently in progress under the lead of RWQCB and DTSC. In 1993, 1998, 2003, and 2008, EPA conducted five-year reviews (as required by CERCLA) to evaluate the protectiveness of the NHOU interim remedy. The Third NHOU Five-Year Review reported that the TCE and PCE groundwater plume that the remedy was designed to capture was migrating vertically and laterally beyond the remedy's zone of hydraulic control. This conclusion was based largely on EPA's evaluation of the current NHOU groundwater conditions and LADWP findings in the Draft Evaluation of the North

Hollywood Operable Unit and Options to Enhance Its Effectiveness. The Final Evaluation of the North Hollywood Operable Unit and Options to Enhance Its Effectiveness also raised concerns regarding detections of total chromium and hexavalent chromium in extraction well NHE-2 of the NHOU interim remedy. Well NHE-2 is located just a short distance from the former Bendix facility, one of the major VOC sources in the NHOU. In July 2006, after a year of unusually high rainfall and rising groundwater levels in the SFV, the total chromium concentration detected at NHOU extraction well NHE-2 began to increase. Chromium was used in the metal plating and aerospace industry (metal fabrication), as well as for corrosion inhibition in industrial cooling towers, from the 1940s through the 1980s. It was also used extensively at the former Bendix facility. In 2007, the elevated concentrations of chromium at well NHE-2 caused total chromium concentrations in the combined NHOU treatment system effluent to exceed 30 micrograms per liter (ug/L) (60 percent of the state MCL). As a result, CDPH advised LADWP to shut down well NHE-2 or divert the water produced by the well to a nonpotable use. Chromium concentrations at this well have subsequently ranged from approximately 280 to 440 ug/L. In addition, 1, 4-dioxane was detected at well NHE-2 during 2007 and 2008 at concentrations ranging from 4 to 7 ug/L. There is no MCL for 1, 4-dioxane, but the CDPH notification level for 1, 4-dioxane is 3 ug/L. Extraction well NHE-2 remained shut down until September 2008, when the installation of a wellhead VOC treatment unit and modification of the discharge piping were completed, which allowed this well to return to service. The NHE-2 effluent, which still contains elevated levels of chromium, is currently discharged to the Los Angeles Bureau of Sanitation sewer system. This work was conducted by Honeywell International (a corporate successor to Bendix) as an interim measure, pursuant to a Cleanup and Abatement Order (CAO) from RWQCB that requires Honeywell to clean up the chromium contamination and to restore lost water caused by the shut down of well NHE-2. A long-term wellhead treatment system for well NHE-2, including treatment for chromium and, if necessary, 1,4-dioxane, to meet drinking water standards is expected to be implemented pursuant to the RWQCB CAO prior to the implementation of the NHOU Second Interim Remedy. Following construction and start up of the Existing NHOU Extraction and Treatment System, EPA issued general and special notice letters to PRPs. In 1996 and 1997, EPA reached two separate settlements with PRPs in which the settling parties agreed to pay EPA's past costs and fund operation of the Existing NHOU Extraction and Treatment System for the remainder of its fifteen-year term. In 2008, when the funds collected pursuant to the 1996 and 1997 settlements were close to being exhausted, EPA entered into an administrative order on consent with a number of parties from 1996 and 1997 settlements and issued a unilateral administrative order to the remaining viable parties in order to secure funding to continue operating the Existing NHOU Extraction and Treatment System until the Second Interim Remedy is constructed and operational. In preparation for the selection and implementation of the Second Interim Remedy, EPA has conducted additional PRP search activity. The RWQCB has issued CAOs to two parties in the NHOU. In December 1987, Lockheed was issued a CAO directing it to remediate contaminated soil and groundwater at Plant B-1 (in the BOU) and to complete a comprehensive Site assessment at all of Lockheed's other Burbank Airport facilities, including Plants B5 and C1 (in the NHOU), to determine the sources and extent of soil and groundwater contamination. The RWQCB issued a CAO in February 2003 to Honeywell International, Inc., for VOC and chromium contamination in groundwater at the former Bendix facility in North Hollywood. This CAO was amended in April 2007 to include investigation and mitigation of emerging contaminants at the former Bendix facility and to address elevated chromium concentrations at NHOU extraction well NHE-2. The land use in the SFV Area 1 Site, including the NHOU, consists of mixed residential, industrial, and commercial use. The SFV is fully developed and land uses in the NHOU are

not expected to change significantly in the next 20 years or longer. The SFV groundwater basin is an important source of drinking water for the Los Angeles metropolitan area, including the cities of Los Angeles, Glendale, Burbank, and San Fernando. The SFV is located in the Upper Los Angeles River Area (ULARA), which is under adjudicated water rights regulated by the ULARA Watermaster. Through court action in 1975, the City of Los Angeles was granted rights to all groundwater in the San Fernando Basin that is derived from precipitation within ULARA. There are a number of production well fields in the eastern SFV, including six LADWP well fields located in or near the NHOU. The output from the existing NHOU remedy accounts for approximately 1 to 2 percent of LADWP's total extraction from the SFV groundwater basin. The need for drinking water development in the eastern SFV, including the NHOU, is expected to increase over the next 20 years as restrictions on importing water to Southern California increase and imported water becomes more expensive. An Interim ROD addressing Operable Unit 4 was completed in September 2009.

EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Background Info: The San Fernando Valley Ground Water Basin (SFVGB) is located within the Upper Los Angeles River Area, and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFVGB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains. The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are:
Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divided into the North Hollywood Operable Unit(OU) and the Burbank OU.
Area #2 - Crystal Springs NPL Site covers 3975 acres located southeast of the North Hollywood NPL site and is in the cities of Glendale and Los Angeles.
Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the SF Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.
Area #4 - the Pollock NPL Site covers 1635 acres in the south-eastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale.
Groundwater contamination in the SFVGB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.
The primary contaminants of concern are the volatile organic compounds (VOCs) trichloroethylene (TCE) and tetrachloroethylene (PCE). These compounds have been and/or are being used in many

San Fernando Valley industries, such as aeronautical, automotive dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGWB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater contamination in numerous wells have been so severe with TCE and PCE that these wells have essentially been put out of commission. Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOC vapors released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigations and cleanup of contaminated groundwater in the San Fernando Valley since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing and implementing cleanup remedies, and identifying responsible parties. EPA provided oversight of the basinwide Remedial Investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, hydrogeology and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate and transport of compounds in the environment; identify Applicable or Relevant and Appropriate Requirements; (ARAR's) and evaluate the potential risk to human health and the environment. The Remedial Investigation of the SFVGWB was divided into two phases.

Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contamination information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4).

Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.

Phase II activities consist of a basinwide remedial investigation conducted by the LADWP.

Remedial Actions (RAs):

North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.

A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating

1000709322

contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.

A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Phase I of the Burbank OU began operations in January 1996 treating groundwater at a rate of 6,000 gpm. Phase II began operations in May 1998 adding an additional 3,000 gpm to the Burbank OU's treatment capacity.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU has been separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remeday. The PRPs have formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW extraction and treatment. The Glendale OU began operations in September 2000.

Verdugo and Pollock (Areas #3 and #4) -- Currently no RAs have been identified for Area #3 or for Area #4. In October 2003 US EPA proposed No Remedial Action for Verdugo Basin (Area #3).

Another contaminant of concern, hexavalent chromium, has been identified in the San Fernando Valley Groundwater Basin.

EPA and the RWQCB are currently identifying potential sources of contamination and pursuing PRPs that may be responsible for contaminating groundwater. As these PRPs are identified, individual site investigations and mitigation activities will be pursued. Enforceable agreements and orders will be implemented at numerous specific potential source sites within the Basin by RWQCB and DTSC

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type: Cleanup Program Site
Case Worker: LM
Local Agency: BURBANK, CITY OF
RB Case Number: 104.0812
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: PAC owned 2940 from the 1947 until 2006. Activities included aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. These former site operations resulted in VOC impacts to soil and groundwater, primarily PCE USEPA and Regional Board required site characterization. USEPA issued a UAO on February 18, 1994 An NFR letter for Parcel A (i.e., the approximate southern half of the property) was issued by Regional Board in 1996. Since 1994, the site has voluntarily conducted cleanup concurrent with work required by Regional Board at 2960. The Regional Board issued a Cleanup and Abatement Order (CAO) for 2960 Sherman Way in 1992. A history of environmental investigations conducted at the site include: 1. Aug 2001 Baseline soil vapor investigation at 2940 and 2960 2. Dec 2001 SVE pilot tests at 2940 and 2960 3. Jan 2002 to present SVE under CAO at 2960 4. Jan 2003 to July 2006 Voluntary SVE at 2940 5. Sept 2006 Additional vapor probe installation and investigation at 2940 6. Oct 2006 Verification soil vapor sampling at 2940 7. 2001 to present Quarterly vapor probe monitoring and periodic SVE optimization

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: 212

Waste name: 212

Waste code: 351

Waste name: 351

Waste code: 741

Waste name: 741

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING,

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

CA WDS:

Facility ID: 4 19I004519
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit

Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

CA WDS:

Facility ID: 4 19I016820
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 4
Facility Telephone: 8188422184

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Registry ID: 110002142636

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

PH BURBANK HOLDINGS INC (Continued)

1000209850

information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Case Type: Cleanup Program Site
Case Worker: LM
Local Agency: Not reported
RB Case Number: 104.1132
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Dioxin / Furans, Chromium, Mercury (elemental), Other Metal
Site History: As of the end of 2008, site had completed onsite assessment work. A "draft" CAO was being developed by Regional Board staff that would've included a requirement for the discharger to develop and submit a Remedial Action Plan. Regional Board oversight was placed on hold, because discharger filed for Chapter 11 Bankruptcy. Presently, the bankruptcy proceedings are being completed. If insufficient funds are available based on the bankruptcy proceedings, then the lead regulatory oversight may be transferred to the USEPA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 File Location: Regional Board
 Potential Media Affected: Aquifer used for drinking water supply, Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Under Investigation
 Potential Contaminants of Concern: Not reported
 Site History: After reviewing (1) Vapor Extraction System Operation Report dated December 19, 2008, and (2) Temporary VES Operation Report & Closure Borings Workplan dated August 12, 2009, Regional Board staff M. Zaidi had a meeting on 11/10/2009 with the RP and staff of The Source Group at the site. Mike Wood of the Source Group sent an email to Mr. Zaidi summarizing the meeting notes, which were reviewed and amended by Mr. Zaidi and sent back to Mr. Wood in an email dated 11/25/09. After collecting soil gas samples from the wells, The Source Group will submit a technical report after receiving the analytical results of the soil gas samples to the Regional Board staff for their review. The RP consultant has collected soil gas samples for a rebound test on 2/19/2010, and plans to drill two confirmation soil borings in March 2010.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility Status: Treatment & Storage Closure: The Facility is located approximately + mile East of the Burbank airport. The site consists of 11 acres, housing buildings and a Storage Yard that contains idle equipment storage, the hazardous material and hazardous waste storage sheds. The operations at the facility consisted of chromium and cadmium plating. The hazardous waste constituents included cadmium, chromium, nickel, aluminum and sodium chromate. The Facility is no longer in operation. It appears that a closure plan was submitted in 1991 (revised in 1998). It appears that two closure plans (February 1999 and December 2001) were submitted. DTSC has rejected both plans in March 2002. Apparently, the Facility has entered into a consent agreement with DTSC to close the hazardous waste management units. The records also show that the Regional Board has a parallel process of site assessment for remediation purposes. There could be some jurisdiction issues. The proposed approach is to proceed with the technical review of the submitted closure plan. The facility was inspected. The hazardous waste management units that were subject to regulatory closure, in this particular case, the Plating Shop and associated treatment plant, have gone through a demolition process in 1999-2000 and have been removed. In addition, an underground hazardous waste storage tank (Tank 3) has also been removed. In both cases, the surrounding soils (heavy metals for the shop, VOCs for the tank) have been impacted. The facility representative indicated that a meeting was held between DTSC and the Regional Board to officially pass on the closure and remediation project to the Board. The Regional Board project manager was contacted and was able to confirm the statements made by Crane. Facility is currently working with the RWQCB in addressing environmental impacts from past operations of the underground storage tank and the plating line. A Work Plan has been submitted and is under review by RWQCB. The next step is to have DTSC be included in the Work Plan Review to verify that Hazardous Waste Closure requirements are addressed.
