 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type: Cleanup Program Site
Case Worker: EHW
Local Agency: Not reported
RB Case Number: 104.1132
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Dioxin / Furans, Chromium, Mercury (elemental), Other Metal
Site History: As of the end of 2008, site had completed onsite assessment work. A "draft" CAO was being developed by Regional Board staff that would've included a requirement for the discharger to develop and submit a Remedial Action Plan. Regional Board oversight was placed on hold, because discharger filed for Chapter 11 Bankruptcy. Presently, the bankruptcy proceedings are being completed. If insufficient funds are available based on the bankruptcy proceedings, then the lead regulatory oversight may be transferred to the USEPA.

 File Location: Regional Board
 Potential Media Affected: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Not reported
 Site History: Space-Lok, Inc. occupied the site (Site) from approximately 1962 to 1996, producing primarily aircraft fasteners. Aqueous finishing was only conducted in the building located in the southeastern portion of the Site. Solid sodium-dichromate was documented to have been stored inside the building. Subsurface soil investigations for heavy metals were conducted in June 2013 and July 2014. All CrVI detections were below the commercial/industrial RSL of 6.3 mg/kg. Concentrations of CrVI slightly exceeding the residential RSL of 0.3 mg/kg (0.45 mg/kg and 0.72 mg/kg) are shallow and limited in extent (one boring).

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 22245.9

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 208.5

Waste code: D006
Waste name: CADMIUM
Amount (Lbs): 12149.9

Waste code: D007

CA BOND EXP. PLAN:
 Reponsible Party: RWQCB REFERRAL SITE
 Project Revenue Source Company: Not reported
 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: The PRP is providing for the remediation of the site under RWQCB lead and will pay all costs associated with site cleanup. There are no current plans for expenditure of Bond funds for the site.

Actual:
679 ft.

Site Description: The site is the location of an aircraft manufacturing facility constructed in the late 1930's and early 1940's. Operational activities include aircraft research, manufacturing and maintenance. Hazardous materials which are used at the facility include plating solutions, acids, fuels, and solvents.

Hazardous Waste Desc: The facility overlies the San Fernando Valley Ground Water Basin. Analysis of monitoring wells on the facility and downgradient has revealed contamination of the ground water by perchloroethylene (PCE) and trichloroethylene (TCE). Concentrations of PCE vary from approximately 20 to 12,000 parts per billion (ppb) and from approximately 20 to 1,600 ppb for TCE. Other compounds detected at low levels are acetone, chloroform, methyl ethyl ketone, chlorobenzene, ethylbenzene, and benzene.

Threat To Public Health & Env: The contaminated aquifer is a major source of drinking water for the city. Wells downgradient have been shut down due to contamination from this or other sources. If the contamination migrates further offsite, additional wells may become contaminated, thus leading to a reduction in water quality and potential long-term loss of water supply.

Site Activity Status: The potentially responsible party (PRP) has installed ground water monitoring wells and is currently working under the direction of the Regional Water Quality Control Board to determine the nature and extent of the contamination.

Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/26/2012
Comments: 3/22/2012, DTSC's PM visited the site, and performed walk through of the site with Mr. Sergik Avakian representing the American Best Engineering, the current operator at the site. It was observed that the restricted area as defined by the LUC is in full compliance with the stipulated terms in the LUC. Mr. Avakian mentioned that he is renting/lease the site from a new owner. On 3/26/2012 DTSC's PM contacted Mr Richard Fond, and was confirmed Mr Fond sold the property on March 2012. DTSC's PM requested Mr Fond to advise DTSC regarding the particulars on the ownership transfer as required by the LUC, Mr. Fond will respond to the request.

 Lead Agency: LOS ANGELES RWQCB (REGION 4)
 Lead Agency Case Number: Not reported
 Latitude: 34.2022726941299
 Longitude: -118.340971469879
 Case Type: Cleanup Program Site
 Case Worker: GP
 Local Agency: Not reported
 RB Case Number: 104.1005
 File Location: Regional Board
 Potential Media Affected: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Not reported
 Site History: The site is currently an active metal processing facility. Historical operations at the site also include metal fabrication and the use of caustics, acids, solvents, ammonium nitrate, and lubricants. The site was formerly occupied by Stainless Steel Products. The current occupant of the site is Senior Aerospace SSP. An SVE system operated at the site from 1998 through 2002 to treat VOCs in the subsurface. An NFA was issued in April 2005 for VOCs in soils only. A California Water Code 13267 Order was issued in June 2013 to Breeze-Eastern, Senior Aerospace (current occupant), William Zimmerman and James Galbraith to conduct a subsurface investigation for potential chromium and hexavalent chromium impact. An Order was issued to Breeze-Eastern and Senior Aerospace for groundwater monitoring at the site. Breeze-Eastern is currently conducting the site assessment for heavy metals.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA

Date Made Active in Reports: 06/22/2015	Last EDR Contact: 07/09/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015	Source: EPA

Number of Days to Update: 64	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 08/03/2015	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 08/04/2015	Telephone: 916-323-3400

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

West Map:	5630789 VAN NUYS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> LOS ANGELES, CA	<u>FEMA Flood Electronic Data</u> YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	06037C - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> BURBANK	<u>NWI Electronic Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	---

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Surficial Soil Types: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Shallow Soil Types: fine sandy loam
 gravelly - loam
 sand
 silty clay

Deeper Soil Types: stratified
 clay loam
 silty clay loam
 gravelly - sandy loam
 coarse sand
 sand
 weathered bedrock
 very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

APPENDIX H

RESUMES

RESUME OF CONNIE LIZARRAGA *Senior Staff Environmental Scientist*

EDUCATION

Bachelor of Science, Environmental Science, 2007, University of California, Riverside

EMPLOYMENT HISTORY

2005-2006 – Environmental Research Institute (environmental program management)

2006-2006 – Center for Environmental Research and Technology (research development)

2006-2007 – Regional Water Quality Control Board, Santa Ana Region (storm water regulation)

2008-present – Ardent Environmental Group, Inc. (environmental consulting)

PROFESSIONAL EXPERIENCE AND RESPONSIBILITIES

As a Senior Staff Environmental Scientist for Ardent Environmental Group, Inc., Ms. Lizarraga conducts a variety of field and office tasks in support of environmental assessment, site characterization, and remediation projects using the principles of chemistry, geology, geography, and engineering. Tasks include development of work plans, collection of field data, sample collection, groundwater monitoring well installation and abandonment, research and review of regulatory records and historical land use records, directing subcontractors, data evaluation, and technical report preparation. Ms. Lizarraga's project experience includes:

- **Groundwater Monitoring and Vapor Extraction Well Installation:** Installed a number of groundwater monitoring wells and vapor extraction wells at properties throughout Southern California for the characterization of impacted groundwater and remediation of impacted soil. These tasks include obtaining construction permits, interactions with regulatory agencies, directing drilling contractors, and designing well construction. Following installation, groundwater monitoring wells are developed by various methods including bailing, surging, and pumping, using air lift and submersible pumps.
- **Monitoring Well Abandonment:** Senior Staff Scientist for several projects involving the abandonment of groundwater monitoring wells that are no longer part of an active groundwater monitoring program. Duties include obtaining permits, directing subcontractors, and preparation of well closure reports for submittal to regulatory agencies.
- **Groundwater Monitoring:** Perform quarterly groundwater monitoring activities at several facilities including an aerospace manufacturing facility in Torrance, California, a private automobile fueling station in Commerce, California, and a former testing laboratory in Cudahy, California. Ms. Lizarraga also monitoring groundwater monitoring wells installed for the Water Replenishment District of Southern California as part of the Central Basin Groundwater Contamination Study in Santa Fe Springs. Wells are purged of static groundwater using submersible pumps and hand bailers. Groundwater is collected from monitoring wells and sent to a laboratory for analyses on a quarterly basis to determine the effectiveness of remedial actions at the properties. Quarterly monitoring reports are

RESUME OF CONNIE LIZARRAGA
Senior Staff Environmental Scientist

Continued

prepared in accordance with California Regional Water Quality Control Board requirements and are uploaded to the State's GeoTracker website.

- **Phase I Environmental Site Assessment:** Staff scientist for numerous Phase I Environmental Site Assessment reports throughout the state of California. Report preparation includes site reconnaissance activities involving visual site inspection, research and review of regulatory records and historical land use records, and identification of potential environmental concerns and/or impacts to the site.
- **Phase II Site Characterization:** Staff scientist for several projects involving the advancement of soil borings by direct-push and hollow-stem auger methods to assess the nature, magnitude, and extent of soil contamination via sample collection and analyses. These duties also include the conducting soil gas surveys to assess vapor concentrations of methane gas and/or volatile organic compounds for exposition hazards and human health risks.
- **Underground Storage Tank Closure:** Staff Scientist directing subcontractors in the removal of 3,000-gallon and 10,000-gallon fuel underground storage tanks in Los Angeles, California. Tasks involved obtaining permits, coordinating regulatory inspectors and subcontractors, directing field excavation, sample collection, and preparation of a closure report for submittal to the City of Los Angeles Fire Department (LAFD).
- **Moisture Surveys:** Staff scientist for several projects involving moisture surveys, mold abatement clearance inspection, and air sampling collection. Project tasks consisted of moisture surveys using a hand-held moisture meter, visual inspections of mold abatement areas, and the collection of source and background air samples. Moisture survey or mold abatement clearance reports were prepared following receipt of air sample results.
- **Remediation System Monitoring:** Perform weekly monitoring of vapor extraction systems operation at various locations in Southern California. Monitoring is performed to evaluate the progress and efficiency of the vapor extraction systems and to comply with the South Coast Air Quality Management District (SCAQMD) emission monitoring requirements.
- **Geophysical Investigations:** Staff scientist directing subcontractors during geophysical investigations for the purpose of identifying detectable buried underground storage tanks using high sensitivity metal detection equipment, ground penetrating radar, and electromagnetic utility-locating methods.
- **Tenant Exit Environmental Assessments:** Performed numerous environmental assessments of industrial tenants that were in process of vacating a long-term lease. The purpose of the assessments was to identify potential releases of hazardous materials to the buildings or subsurface so that the responsible tenants could deal with the issues prior to vacating the lease.

RESUME OF PAUL A. ROBERTS

Principal Geologist

EDUCATION

Bachelor of Science, Geology, 1987, California State University, Fullerton, California

REGISTRATION AND CERTIFICATIONS

Professional Geologist, California PG 6897
Registered Geologist, Arizona RG 42445
Ventura County Well Inspector
OSHA 40-Hour Health and Safety Training (with annual updates)
OSHA 8-Hour Health and Safety Supervisor Training

EMPLOYMENT HISTORY

1986-1996 – Applied Geosciences Inc. (environmental consulting)
1996-1998 – ATC Associates (environmental consulting)
1998-2007 – Ninyo & Moore (environmental consulting)
2007-present – Ardent Environmental Group, Inc. (environmental consulting)

PROFESSIONAL EXPERIENCE AND RESPONSIBILITIES

As a Principal Geologist for Ardent Environmental Group, Inc., Mr. Roberts coordinates geotechnical and geologic field evaluations and supervises field technicians and staff- and project-level geologists and engineers, reviews historical stereoscopic aerial photographs, fire insurance maps, and other historical documentation to assess the location and possible environmental affects of former features on subject properties, interacts with clients, attorneys, and agency representatives. Mr. Roberts also performs geologic and hydrogeological research and performs detailed logging and sampling of trenches, and large- and small-diameter borings. Mr. Roberts is very familiar with mud- and air-rotary, sonic, direct-push, and hollow stem auger drilling technics. Mr. Roberts interprets geophysical data to evaluate the possible presence of covered underground features such as underground storage tanks, clarifiers, sumps, and wells which may have had an environmental impact on subject properties, writes and reviews geologic reports work plans, Phase I Environmental Site Assessments, risk assessments, subsurface investigation reports, monitoring reports, feasibility studies, and remediation reports.

- **Former Chemical Plant, Santa Fe Springs:** Principal Geologist retained to log and sample deep borings for the installation of groundwater wells used to characterize the vertical and lateral extent of volatile organic compound (VOC) impacted groundwater. Sonic, mud-rotary, and hollow stem auger drilling methods were used to drill borings to depths of up to 400 feet below the ground surface (bgs).
- **Port of Los Angeles:** Project Geologist managing several environmental projects for the Port of Los Angeles (POLA) under an on-call contract. Project Geologist interacting with POLA personnel regarding environmental issues associated with land purchases, tenant

RESUME OF PAUL A. ROBERTS
Principal Geologist

audits, and on-call remediation. Projects have involved removal of underground storage tanks at the Yang Ming Terminal and continued groundwater monitoring, and the implementation of a corrosion study at a potential automobile storage yard in the Port of Los Angeles.

- **Alameda Corridor Transportation Authority:** Project Geologist managing numerous environmental projects under an on-call remediation services contract. Projects have involved remediation of petroleum pipelines and impacted soil discovered during construction activities of the Alameda Corridor. One project involved dredging metal-impacted soil from the Port of Los Angeles, where Mr. Roberts acted as the liaison between POLA and ACTA representatives.
- **Riverside County Transportation Commission (RCTC):** Project manager for several projects for RCTC including a Phase I Environmental Site Assessment (ESAs) of the AT&SF ROW from mile post 26.93 to MP 38.2 along the San Jacinto subdivision in Riverside County, California; and Phase I ESAs and assessment and remediation of contaminated soil at proposed Metrolink station in the cities of Corona and Riverside.
- **Los Angeles Unified School District (LAUSD):** Project manager for the completion of Phase I Environmental Site Assessments at several proposed elementary school sites throughout Los Angeles county. Mr. Roberts also managed on-going monitoring of lithological pressure readings of an oil well located on the Belmont High School property. This work was completed under the direction and oversight of the Division of Oil, Gas, and Geothermal Resources.
- **Jack in the Box and Qdoba Restaurants:** Project Geologist managing numerous Phase I Environmental Site Assessments regarding real estate transactions for two major fast food restaurants. Since most of the properties are corner parcels which contained historical gasoline stations, Mr. Roberts would subsequently manage and conduct Phase II Subsurface Investigations to assess whether impacted soil and/or groundwater exists at the site and, if present, characterize the extent of the contaminants. In June 2012, Jack in the Box Inc. and Qdoba awarded Ardent Environmental Group, Inc. an on-call environmental management contract for all Jack in the Box and Qdoba properties throughout the United States. Mr. Roberts is the Project Manager for this contract which includes completing Preliminary Environmental Reviews of possible property acquisitions, completing and managing Phase I and Phase II Environmental Site Assessments and asbestos surveys, and on-call consultation regarding environmental issues and concerns.
- **Environmental Site Assessment:** Project Geologist managing environmental assessment, site characterization, and site remediation for a property located in the city of Santa Fe Springs, California. Historical aerial photographs, information obtained from the Division of Oil, Gas, and Geothermal Resources, and other data were used to assess the possible location of historical oil field activities and to design a site characterization plan. Following assessment of the volume of impacted soil, bid specifications were developed and site remediation was conducted.
- **Industrial Site Located in Riverside, California:** Project Geologist managing the subsurface investigation and characterization of an industrial site in Riverside, California. Groundwater monitoring wells and vapor extraction wells were installed in soil borings

RESUME OF PAUL A. ROBERTS
Principal Geologist

during site characterization. Utilizing equipment supplied by the client, a vapor extraction system was designed and installed at the site.

- **Remediation at Sites in Rancho Dominguez, Commerce, La Mirada, and Riverside, California.** Project Geologist managing the design and installation of many vapor extraction pilot wells for use in feasibility studies. The feasibility studies defined different soil parameters so that a vapor extraction system, including vapor extraction wells, could be designed. Services included management, design, and installation of vapor extraction wells for use in remediation at sites in Rancho Dominguez, Commerce, La Mirada, and Riverside, California.

Subject: Soil Management Plan
Trust Property
Burbank, California

Dear Mr. Tecimer:

Ardent Environmental Group, Inc. (Ardent) has prepared the enclosed Soil Management Plan (SMP) to provide procedures and criteria to guide environmental issues that may potentially be encountered during redevelopment activities at the Trust Property located in the city of Burbank, California (site). The site includes three properties referred to as the "Portion of Former Lockheed Plant B6 Property," the "Former Aviall Parking Lot Property," and the "Former Pacific Airmotive Corporation (PAC) Property," (collectively known as the "Trust Property"). The largest part of the site was formerly occupied by portions of the Lockheed Martin Corporation (Lockheed) Plant B6 facility, which was used for aircraft research, manufacturing, assembly, and maintenance. Other smaller portions of the site were used for aircraft engine maintenance and repair. Based on these historical activities, this SMP has been prepared to guide characterization and mitigation of unknown environmental issues, if encountered.

We appreciate the opportunity to provide service on this project. Should you have any questions or comments, please contact me at your convenience.

Sincerely,
Ardent Environmental Group, Inc.

1 INTRODUCTION

This Soil Management Plan (SMP) has been prepared to provide procedures and criteria to guide environmental issues that may potentially be encountered during grading activities at the Trust Property located in the city of Burbank, California (referred to herein as the “site,” or “subject property;” Figure 1). Work was conducted in general accordance with the proposal dated February 10, 2016 between Overton Moore Properties (OMP) and Ardent Environmental Group, Inc. (Ardent). OMP is in the process of purchasing the site from the Burbank-Glendale-Pasadena Airport Authority (Airport Authority) and redeveloping the property for commercial use. The OMP Purchase and Sale Agreement includes a Land Use Covenant (LUC) which restricts the site land use to commercial/industrial.

The site includes three properties referred to as the “Portion of Former Lockheed Plant B6 Property,” the “Former Aviall Parking Lot Property,” and the “Former Pacific Airmotive Corporation (PAC) Property,” (collectively known as the “Trust Property”). The largest part of the site was formerly occupied by portions of the Lockheed Martin Corporation (Lockheed) Plant B6 facility, which was used for aircraft research, manufacturing, assembly, and maintenance. Other smaller portions of the site were used for aircraft engine maintenance and repair. Based on these historical activities, this SMP has been prepared to guide characterization and mitigation of unknown environmental issues, if encountered.

It should be noted that the site lies within the San Fernando Valley Groundwater Basin Superfund Site and there are currently nine groundwater monitoring wells located on the site (Figure 3). Lockheed has been named a responsible party and uses these wells as part of its larger groundwater monitoring program.

2 BACKGROUND

The majority of the site (approximately 59-acres) was part of a larger property that was formerly used by Lockheed as its Plant B6 facility (referred to herein as the “larger property,” or “Lockheed Plant B6”). The Former PAC Property (approximately 0.69-acre) and Former Aviall Parking Lot Property (approximately 1.53-acre) comprise a much smaller portion of the overall subject property (Figure 2). As part of its acquisition of these properties, Ardent completed individual Phase I Environmental Site Assessment (ESA) reports, and subsequent soil gas investigations. The following presents a summary of the historical land and chemical uses, soil

and groundwater investigations, remaining residual chemicals, regulatory soil cleanup guidelines (historical and current), and proposed redevelopment plan. More detailed historical site activities and the results of subsequent investigations can be obtained in the documentation reports completed for the site.

2.1 Historical Land and Chemical Uses

The following sections present the historical land and chemical uses of each of the properties comprising the Trust Property.

2.1.1 Portion of Former Lockheed Plant B6 Property

The Portion of Former Lockheed Plant B6 Property comprises approximately 59-acres of the former larger 130-acre Plant B6 facility (Figure 2). This portion of the site encompasses most of the Trust Property and was historically used for agricultural purposes or vacant land from at least 1928 through the late-1940s. The Burbank Airport was constructed in the area adjoining west of the site during the early-1940s for use during World War II. From the early-1940s to the late-1990's, Lockheed used the site and site vicinity for aircraft research, manufacturing, warehouse, maintenance, and office purposes (Figure 2). During this time, approximately 65 buildings were constructed at the site (Figure 2). In 1997 and 1998, most of the buildings, foundations, and pavements were demolished and removed from the site. The remaining on-site buildings were demolished in 2001.

During operations of Plant B6, the site was developed with aircraft hangers, aircraft assembly and testing areas, maintenance areas, and office space. Operations at Plant B6 included aircraft parking, final assembly and flight support, classified aircraft research and development, minor subassembly work, aircraft functional testing, and ground support. Supporting activities included cleaning painting, minor tooling, welding, and parts and component machining. Chemicals and materials used and/or stored at the site to support these operations included aircraft fuels, biocides, descalers, fuel oils, gasoline, paints, solvents, acids, caustics, and plastic resins and hardeners. Fuels used at the site included automotive gasoline, aviation gasoline, Jet A, JP-4, JP-5, JP-7, JP-8 and other thermally stable jet fuels. Types of oils used

included conventional motor oils, turbine lubricating oils, hydraulic system oils, and rust prevention oils.

2.1.2 Former PAC Property

The Former PAC Property comprises approximately 0.69-acre and is located in the east-central portion of the site (Figure 2). This property was formerly associated with the main PAC facility located further east of the site and beyond North Hollywood Way (referred to herein as the “Main Facility”). This area was also used for agricultural purposes or vacant land from at least 1928 to the late-1940s. From 1947 to 1996 PAC and its successors used the property for aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. As part of its operations, the Former PAC Property contained 5 engine test cells and associated exhaust areas, control rooms, sumps, clarifiers, floor and trench drains, underground pipelines, fuel pumps, aboveground storage tanks (ASTs), and at least 13 underground storage tanks (USTs). The buildings were razed in 2013 and the property has remained vacant to present-day.

During the PAC operations, jet fuel and aviation gasoline were stored in USTs at the site and pumped via underground product pipelines to the Test Cells. Chemicals that were used at the property included petroleum fuels, oils, greases, Stoddard solvents, chlorinated solvents used as a degreaser, and aromatic hydrocarbons associated with the petroleum fuels and solvents.

2.1.3 Former Aviall Parking Lot Property

The Former Aviall Parking Lot Property is located on the north-central portion of the site (Figure 2). Since at least the 1970s, this property was formerly used as a parking lot by a number of entities which operated commercial businesses immediately west of the site and beyond Kenwood Street. One of these businesses was Aviall, Inc. (Aviall), who used the adjacent property for repair, maintenance, inspection, testing and overhauling jet engines.

Historically, this portion of the site was also used for agricultural purposes or vacant land in 1928. From the 1930s to the 1950s, this portion of the site contained sparse residential development and a possible office. From at least 1954 to 1964, the southern portion of the Former Aviall Parking Lot Property site was used as a parking lot and the northern parcel appeared to have consisted of residential development and possible commercial and/or retail buildings along Kenwood Street. By 1976, the property was acquired by Aviall and was redeveloped as a parking lot. The property has remained a parking lot until present-day. No reported manufacturing operations have been conducted on the property.

2.2 Groundwater Investigations

The site is located within the San Fernando Valley Groundwater Basin which has been designated by EPA as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses. The areas of groundwater contamination, designated as “Operable Units,” contain chemicals such as volatile organic compounds (VOCs), namely trichloroethene (TCE) and tetrachloroethylene (PCE), and other chemicals such as hexavalent chromium and 1,4-dioxane. The site lies within the “Burbank Operable Unit.” A number of investigations have been completed over the years, and based on the results, Lockheed has been named as a potentially responsible party for contributing to the groundwater issues. Groundwater investigations completed at the site have shown elevated concentrations of PCE, TCE, total chromium and hexavalent chromium. Groundwater has been measured at a depth of approximately 220 feet below the ground surface (bgs) and flows in a southeasterly direction.

Currently, there are nine groundwater monitoring wells located on-site. Wells B-6-CW04, B-6-CW05, and B-6-CW06 are located in the northern portion of the site, wells B-6-CW07, B-6-CW08, and B-6-CW09 are located in the northwestern portion of the site, and MW-1, MW-2, and MW-3 are located on the Former PAC Property (Figure 3). These wells are part of a larger groundwater monitoring program that includes additional off-site wells.

Wells B-6-CW04, B-6-CW05, and B-6-CW06 are clustered well casings located adjacent to each other in the northern portion of the site and within a proposed parking lot (Figure 3). Wells B-6-CW07, B-6-CW08, and B-6-CW09 are nested in one borehole/well box located in

the northwestern portion of the site (Figure 3). These wells are located beneath proposed Building 5 (Figure 3). Wells MW-1, MW-2, and MW-3 are individual wells closely configured on the Former PAC Property (Figure 3). These wells will be located within a parking lot area of the new development (Figure 3).

Based on the proposed redevelopment plans, these wells will need to be abandoned or protected prior to grading activities. Following site redevelopment, some of these wells may need to be relocated. It is our understanding that OMP is negotiating with Lockheed to complete these tasks. Because these wells are part of a regional Superfund Site, modifications due to redevelopment activities need to be authorized by the EPA. Typically, the well owner/operator would obtain EPA approval.

2.3 Soil Investigations and Remaining Residual Chemicals

The following presents a brief description of the soil investigations completed at each of the three properties and the residual chemicals remaining.

2.3.1 Portions of Former Lockheed Plant B6 Property

This property was investigated in the early- to mid-1990s for possible VOC sources areas as part of the Regional Water Quality Control Board, Los Angeles Region (RWQCB) Well Investigation Program (WIP) associated with the San Fernando Valley Groundwater Basin Superfund Site. Investigations began in 1991 with an in-depth environmental assessment of the site presenting a comprehensive study of the historical land use, operations, and areas of concern. Based on the results of this investigation, at least 35 underground features consisting of 25 fuel USTs and 10 non-fuel USTs, sumps, and clarifiers were formerly located on-site. A number of areas of concern (AOCs) were identified including USTs, ASTs, sumps, clarifiers, surface stains, process lines, degreasers, trenches and floor drains, and chemical storage and handling areas. These AOCs were subsequently investigated, impacted soils remediated, and USTs and underground features removed. The RWQCB designated the AOC by outlining the site in particular area designations (as shown on Figure 2 as Areas A, B, C, I, J, K, and L) or by former building designations (also shown on Figure 2). It should be noted, that Area K was the Former PAC Property. Based on these investigations, no further action (NFA) letters were issued by the RWQCB in 1996 for

each area except for Area K (which is pending agency review based on recent completion of off-site corrective action).

In January 2016, a soil gas survey was completed at the property by Ardent to assess current conditions and whether elevated concentrations of VOCs were present in the soil gas based on human health risk criteria. Soil gas samples were collected in the area of the proposed buildings and the results were compared to human health risk criteria to assess whether a vapor intrusion issue might be present. Based on the results of the soil gas survey, no “hot spots” indicative of an on-site release were noted. With the exception of one sample, laboratory results indicated no detectable to low concentrations of VOCs, well below regulatory screening levels. One sample indicated concentrations of PCE slightly exceeding regulatory guidelines. To further assess the individual and cumulative concentrations, a human health risk assessment (HHRA) was completed. Based on the results of the assessment, the residual VOCs would not pose a potential unacceptable human health risk to future commercial/industrial occupants of the property and no further work was recommended.

2.3.2 Former PAC Property

Various investigations have been completed at the Former PAC Property since 1984 under the direction and oversight of the EPA, RWQCB, and/or the City of Burbank Fire Department (BFD). Earlier soil investigations were associated with the removal of USTs. Up to 14 USTs were previously operated at this property. Based on removal documentation and/or subsequent subsurface investigation results, there were no indications that USTs remain on the property. Residual concentrations as a result of the UST operations included low concentrations of TPH and methyl tertiary butyl ether (MTBE). Additional soil investigations and remediation via excavation was also completed at the property as a result of a jet fuel spill. Laboratory results of impacted soil remaining included concentrations of approximately 10,000 milligrams per kilogram (mg/kg) of total petroleum hydrocarbons as jet fuel (TPHj) at the base of the excavated area to 4,000 mg/kg at a depth of approximately 74 feet bgs in a soil boring. Jet fuel was not detected in soil samples collected at depths of 79 and 83 feet bgs. The excavations were subsequently backfilled with clean soil and resurfaced. Jet

fuel and aviation gasoline have not been detected in groundwater samples collected at the property.

In 2013, a Phase I ESA was completed at the Former PAC Property by MWH Americas, Inc. (MWH). Based on the result of the 2013 Phase I ESA, MWH provided a list of possible environmental concerns and determined whether data gaps existed. MWH subsequently completed a soil and soil gas investigation to fill in these data gaps. With the exception of PCE discovered in soil gas samples, laboratory results of soil samples collected throughout the site have shown little to no remaining contamination. Based on this information, there was a low likelihood that the residual soil contamination would pose a significant risk to groundwater or be considered a possible unacceptable human health risk through dermal exposure. PCE was detected in soil gas samples slightly exceeding regulatory guidelines using human health criteria for industrial/commercial land use. Because this property is part of the Main Facility located east of the site, and due to the fact that on-going soil remediation is being completed on that adjacent property, the Former PAC Facility was not issued a closure letter by the RWQCB.

To further assess site conditions, Ardent completed a soil gas survey and vapor intrusion evaluation in July 2015. The soil gas survey was conducted in areas previously not investigated in 2013. An HHRA was completed using soil gas data collected during the 2013 and 2015 investigations. Based on the results of the HHRA, the VOC concentrations detected at the property would not pose an unacceptable risk to future occupants of a commercial/industrial building via vapor intrusion.

2.3.3 Former Aviall Parking Lot

As noted above and presented in Ardent's Phase I ESA for this property, there was no indication of manufacturing activities or chemical uses at this property. Based on this information, Ardent concluded that there was a low likelihood of residual VOCs in soil gas that would pose a possible unacceptable human health risk. However, for precautionary measures and to assess possible unknown commercial use at the site, Ardent recommended a limited soil gas survey as a screening technique to assess whether "hot-spots" indicative of an on-site release where present and to verify that

no unacceptable human health risk was present. Laboratory results of a subsequent soil gas survey indicated no detectable to low concentrations of VOCs, with no “hot-spots” indicative of an on-site release of possible unacceptable human health risk.

2.4 Regulatory Soil Cleanup Guidelines

Contaminants remaining at the site include petroleum hydrocarbons, VOCs, polychlorinated biphenyls (PCBs), and metals. Most of the earlier investigations were completed in the 1990s under the direction and oversight of regulatory agencies. At that time, regulatory closure was obtained if it was determined that the residual contaminants did not pose an environmental risk (threat to groundwater) or human health risk through dermal exposure. In later years (mid-2000s), regulatory agencies also began evaluating remaining residual contaminants for possible off-gassing which might pose a potential threat to human health through vapor intrusion.

2.4.1 Threat to Groundwater and Dermal Exposure

At the time of site closure, regulatory agencies used a number of guidelines to assess whether a threat to human health or the environment existed. One such guideline used for the protection of groundwater from petroleum hydrocarbons and VOCs was the Regional Water Quality Control Board, Los Angeles Region (RWQCB), Interim Site Assessment and Cleanup Guidebook dated May 1996. This document is still in use today.

For possible dermal exposure, regulatory agencies typically used the EPA Region 9 Soil Screening Levels (SSLs). Since that time, EPA Region 9 changed the name of these guidelines to the Regional Screening Levels (RSLs). These levels have been periodically updated through the years with slight modifications, although in general, have not significantly changed.

An addition to the list of guidelines currently being used by regulatory agencies, the Department of Toxic Substances Control recently presented its own Screening Levels, referred to as the “DTSC-SLs.” The DTSC-SLs comprise a small list of chemicals that were determined by the State to have more stringent cleanup guidelines than the Federal RSLs.

As part of the recently completed Phase I ESAs, Ardent compared the concentrations and constituents remaining at the site with regards to current regulatory guidelines. Based on its review, Ardent concluded that the residual contaminants would not pose a significant risk to the environment or human health through dermal contact. Based on this information, Ardent did not recommend additional soil or groundwater sampling.

2.4.2 Threat to Human Health Through Vapor Intrusion

Although low concentrations of VOCs remained in discrete soil samples at the site, the possibility of off-gassing from these on-site residual contaminants as well as migration of known VOC contamination from off-site releases was present. Based on this information, Ardent recommended completing soil gas investigations at the site to assess current conditions and whether a possible human health risk was present through vapor intrusion.

As noted above, Ardent completed extensive investigations at all three properties associated with the Trust Property. Residual VOC contamination, namely PCE, was noted at the Portions of Former Lockheed Plant B6 Property and the Former PAC Property. No “hot-spots” indicative of an on-site release were noted. Residual concentrations were evaluated by completing a HHRA which compared individual and accumulative concentrations using the EPA approved Johnson & Ettinger (J&E) model with very conservative default parameters. Based on the results, no unacceptable human health risk was identified. The results of the recently completed soil gas survey at the Former Aviall Parking Lot Property have not been received, but will be evaluated following receipt.

Based on the concentrations of the residual contaminants remaining on-site, there is a low likelihood that a threat to groundwater or a human health risk is present, both through dermal contact and vapor intrusion, when compared to historical and current regulatory guidelines.

2.5 Proposed Redevelopment Plans

OMP is proposing to redevelop the southern and western portions of the site with six warehouse buildings (Buildings 1 through 6) with sizes ranging from approximately 87,000 to 268,000 square feet. The northeastern portion of the site is proposed to be redeveloped with 10 office buildings, two retail buildings and up to a 175 room, two-story, hotel. The layout of the proposed buildings is shown in Figure 3.

3 OBJECTIVE

The objective of the SMP is to specify the manner and implementation of monitoring grading activities and to identify and properly manage unknown environmental concerns that might be encountered during site grading and development. This SMP provides procedures for the effective and prompt communication of the discovery of unknown environmental concerns to the responsible party during site grading and development. The SMP and individuals' Health and Safety Plan will control the exposure of site workers and the general public to dust, vapors, or odors associated with the site grading operations. The SMP also presents the procedures to sample import fill material that might be used at the site, if necessary. Provisions of the SMP may also apply to post-redevelopment.

4 PROGRAM PARTICIPANTS

The following presents the SMP program participants.

4.1 Ardent Representatives

Ardent will act as the environmental consultant and provide field oversight and management services for the SMP. Ardent personnel will include a SMP Field Coordinator and a SMP Program Manager.

The SMP Field Coordinator for this project is:

- Jon Anderson, Ardent office (951) 736-5334, cell (909) 754-8410

The SMP Program Manager for this project is:

- Paul Roberts, Ardent office (951) 736-5334, cell (951) 751-3198

The Alternative SMP Program Manager for this project is:

- Dennis Kawasaki, Ardent office (951) 736-5334

4.2 Owner's Participants

By the time this plan is implemented, OMP will be considered the owner of the site. As owner of the site, OMP's representatives are as follows:

The Owner's Development and Project Director are:

- Mr. Michael Johnson, OMP, office (310) 323-9100
- Mr. Floyd Younkin, OMP, office (310) 323-9100

4.3 Capital Partner's Participants

The Capital Partner's Participants will include entities from Invesco and its environmental consulting firm, Targus Associates (Targus). The Lender's Participants will include:

- Mr. Scott Ballard, Invesco, office (972) 715-7435
- Mr. Samuel Johnson, Targus, office (972) 247-7229

4.4 General Contractor's Participants

The General Contractor will provide contracting services, including grading activities, during redevelopment.

The General Contractor's Project Manager is:

- To be determined

The General Contractor's Project Site Superintendent is:

- To be determined

4.5 Agency Participants

The RWQCB has been the lead regulatory agency for most of the soil characterization, remediation, and final closure. The City of Burbank Fire Department is the local lead regulatory agency for regulated features such as USTs.

5 INDIVIDUAL/AGENCY RESPONSIBILITIES

The following presents the individual/agency responsibilities of the SMP program participants. Based on the information provided above, no significant impacted soils are expected to be encountered during grading activities. This SMP presents the procedures to address possible "unknown environmental concerns" encountered during grading operations (i.e. previously

unknown conditions or “surprises”), and to present a sampling protocol for possible import soils to the site, if needed. No exporting of soils is planned at this time.

As discussed herein, “unknown environmental concerns” are defined as regulated features (e.g. underground storage tanks [USTs], septic pit, clarifier, etc.) or unregulated features (e.g. stained or odorous soil, or elevated vapor concentrations measuring between approximately 10 and 20 parts per million (ppm) as measured with a photoionization detector [PID]) discovered during grading (i.e. “surprises”). If unknown environmental concerns are discovered, Ardent will direct and oversee the characterization and remediation activities. Cleanup activities that may be warranted will be completed to the satisfaction of a regulatory agency or to the standards proposed in Section 6.2.3. Groundwater has been reported at depths of approximately 220 feet below the ground surface and will not be encountered during construction activities.

5.1 SMP Field Coordinator

The SMP Field Coordinator shall be responsible for the following tasks:

- Monitor field activities to assess potential unknown environmental concerns, if encountered;
- As directed and after having been permitted (if required), supervise activities related to unknown environmental concerns and other environmental conditions;
- If and when needed, collect samples and arrange for laboratory analyses; and
- Maintain record of soil sample locations and document field conditions.

5.2 SMP Program Manager

The SMP Program Manager shall be responsible for the following tasks:

- Monitor the work of the SMP Field Coordinator;
- Communicate field activities to the Owner’s Project Director;
- Notify Owner’s Project Director and RWQCB of unknown environmental concerns encountered during redevelopment activities;
- Communicate with regulatory agencies to investigate unknown environmental concerns and other environmental conditions;
- Consultation with regulatory agencies to characterize and delineate the proper management of unknown environmental concerns and other unknown environmental conditions; and
- Prepare reports of field activities.

5.3 General Contractor Project Manager or Project Site Superintendent

The General Contractor Project Manager or Project Site Superintendent shall be responsible for the following tasks:

- The General Contractor will monitor grading operations for fugitive dust in accordance with SCAQMD guidelines and will take such measures, as necessary, to properly manage dust and soil from leaving the site;
- Report suspected unknown environmental concerns to the SMP Field Coordinator who will notify the SMP Program Manager and/or the Owner's Project Director. The SMP Program Manager or Owner's Project Director will contact the RWQCB, when applicable; and
- If an unknown environmental concern is encountered, the SMP Field Coordinator will direct the General Contractor to stop grading activities in the area of the feature and delineate the area with "Caution" tape, delineators, or fencing, prior to characterization and/or remediation.

5.4 Agency Responsibilities

If unknown environmental concerns are discovered during redevelopment activities, Ardent will proceed in accordance with the approach outlined in Section 6.2.2 and, as may be required, will notify and work with the appropriate regulatory agency to oversee and approve permits, work plans, and reports on an expedited schedule so as not to delay grading or redevelopment activities.

5.5 General Responsibilities

Ardent personnel working at the site will have current HAZWOPER health and safety training. As presented in Section 6.1.1, Ardent will implement a Health and Safety Plan (HSP) that covers Ardent's employees and subcontractors. A copy of the HSP is presented in Appendix A. Ardent's scope of work for this project does not include health and safety monitoring for the General or Grading Contractor's personnel and subcontractors as part of their daily work activities or during any soil excavation activities. The General Contractor and subcontractors will provide their own HSP.

6 ENVIRONMENTAL ACTIVITIES FOR SITE GRADING AND EXCAVATION

The following presents the activities that will be performed prior to, during, and following the on-site grading and excavation activities.

6.1 Pre-Grading Activities

The pre-grading activities will be conducted to minimize down time and interruptions of grading activities if unknown environmental concerns are encountered. Pre-grading activities are intended for health and safety issues and preparing and coordinating site individuals with their respective responsibilities.

6.1.1 Health and Safety Plan (HSP)

Arden has prepared a HSP to protect Arden's workers and subcontractors from chemicals that might be encountered. A copy of the HSP is provided in Appendix A.

6.1.2 South Coast Air Quality Management District (SCAQMD), Various Sites Permit

SCAQMD Rule 1166 requires monitoring of soil during "...excavating or grading [of] soil containing VOC materials..." Based on previous investigations, this property, in general, would not be considered a "VOC-Contaminated Site" as defined by SCAQMD Rule 1166. Based on this information, continuous monitoring for VOCs is not necessary during mass grading activities at the site. For precautionary measures, Arden will monitor grading activities at the site for stains, odors, and/or elevated PID readings. These precautionary measures will be conducted in general accordance with SCAQMD monitoring guidelines and Invesco's Environmental Monitoring Requirements in Appendix B.

If VOC-Contaminated soils are discovered during the monitoring activities (with PID measurements greater than 50 ppm), soil remediation and continuous monitoring of the redevelopment activities may be necessary. If continuous monitoring becomes necessary, Arden will use its SCAQMD Various Sites Permit to continuously monitor these activities. If encountered, the vapors will be suppressed, the SCAQMD will be notified, and soil mitigation might be necessary; as per the Various Sites Permit. A copy of the Various Sites Permit is provided in Appendix C.

Based on the results of previous investigations, it is highly unlikely that these levels of VOCs will be obtained. In the unlikely event that elevated PID readings are detected which result in an excess of 2,000 cubic yards of VOC-Contaminated soils, a Site Specific Soil Mitigation Plan will need to be obtained from the SCAQMD.

6.1.3 Pre-Grading Meeting

A pre-grading meeting will be attended by the SMP Field Coordinator, the SMP Program Manager, the General Contractor Project Manager, the General Contractor Project Site Superintendent, and the Owner's Project Director. The agenda of the meeting will include an oversight of the historical land use, environmental investigations, potential chemicals of concern, worker safety requirements, and dust control measures. The meeting will also be held to discuss possible unknown environmental concerns that might be encountered. The SMP Program Managers will present and review the information provided in this SMP, including individual's responsibilities and emergency phone numbers.

6.1.4 Sampling Imported Soil

To assure that imported soils to the site are "clean," Ardent will sample the materials prior to transport to the site. Currently, regulatory agencies have not established standards that address environmental requirements for acceptance of clean imported fill materials at commercial properties. The DTSC, however, has issued an advisory entitled "*Information Advisory Clean Imported Fill Material*" dated October 2001. This guideline was prepared for school sites and is very conservative, and therefore, will be used as a general guideline, depending on the amount of soil to be imported and source location. A copy of this document is provided in Appendix D. Ardent may use additional information such as knowledge of the property or known land use history to determine actual sampling criteria.

6.1.4.1 Sampling Criteria

To minimize the potential of introducing contaminated fill material onto the site, it is necessary to verify through documentation that the fill source is adequate and/or have the fill materials analyzed for potential contaminants based on the location and history of the source area. Fill documentation might include a Phase I ESA and/or the results of testing. If such documentation is not available or is inadequate, Ardent will conduct a review of the property locations current and historical operations to be used to decide what analytical parameters are relevant. The analyses of the fill material will be based on the source of the fill and/or knowledge of the prior

land use. If knowledge of the prior land use is unknown, then an appropriate suite of analyses must be performed prior to the fill being used at the site. Sampling procedures are presented in Appendix E.

The following tables present the general recommended number of samples to be collected from an area of fill obtained from in-place materials and the number of samples to be collected from a volume of fill from stockpiled materials.

Table 1: Recommended Fill Material Sampling Schedule

Area of Individual Borrow Area	Sampling Requirements
2 acres or less	Minimum of 4 samples
2 to 4 acres	Minimum of 1 sample every ½ acre
4 to 10 acres	Minimum of 8 samples
Greater than 10 acres	Minimum of 8 locations with 4 sub-samples per location (32 total samples)
Volume of Borrow Area Stockpile	Sample per Volume
Up to 1,000 cubic yards	1 sample per 250 cubic yards
1,000 to 5,000 cubic yards	4 samples for first 1,000 cubic yards +1 sample per each additional 500 cubic yards
Greater than 5,000 cubic yards	12 samples for first 5,000 cubic yards +1 sample per each additional 1,000 cubic yards

Table 2 presents the recommended chemical analyses to be performed based on the fill source. To assess the chemical analyses, a Phase I ESA or equivalent document shall be reviewed to assess historical and current uses of the property and to determine whether the borrow area may have been impacted by previous activities on the property. If a Phase I ESA is not available, Ardent will conduct a preliminary screen of the site. All sampling and analyses will be completed prior to delivery of the materials to the site. Composite sampling will not be allowed. The acceptable levels are based on current regulatory guidelines and/or site specific cleanup criteria's as presented below.

Table 2: Recommended Chemical Analyses for Fill Source Area

Fill Source	Target Compounds
Land near existing freeway	Lead (EPA Methods 6010B or 7471A), PAHs (EPA Method 8310)
Land near mining area or rock quarry	Heavy Metals (EPA Methods 6010B and 7471), Asbestos (polarized light microscopy), pH
Agricultural Land	Organochlorine Pesticides (EPA Method 8081A or 8080A); Organophosphate Pesticides (EPA Method 8141A); Chlorinated Herbicides (EPA Method 8151A), Heavy Metals (EPA Methods 6010B and 7471)
Residential/ Acceptable Commercial Land	VOCs (EPA Method 8021 or 8260B, as appropriate and combined with collection by EPA Method 5035), semi-VOCs (EPA Method 8270C), TPH (EPA Method 8015 modified), PCBs (EPA Method 8082 or 8080A), Heavy Metals including Lead (EPA Methods 6010B and 7471)

6.1.4.2 Acceptable Levels

Following receipt of laboratory reports, Ardent will evaluate these data to assess whether the materials meet the criteria of “clean” soils. To do so, Ardent will compare the results to a number of current regulatory guidelines. When more than one cleanup standards are used, the more conservative value will be used. When applicable, commercial standards will be used. In general, if concentrations exceed the standards set forth in these documents, the materials will not be accepted as fill materials. However, if chosen, a risk analysis may be completed using site specific data to further evaluate whether the materials may be used on site. The following documents will be used to evaluate import soils.

- RWQCB Interim Site Assessment and Cleanup Guidebook dated May 1996 (referred to herein as the “RWQCB guidelines”);
- EPA Region 9, Regional Screening Levels for industrial/commercial land use (RSLi), dated November 2015;
- Hazardous waste criteria outlined in the California Code of Regulations (CCR) Title 22 (referred to herein as Title 22); and/or
- DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3, DTSC-modified Screening Levels (DTSC-SLs) for industrial/commercial future buildings, dated January 2016.

The following presents the constituents to be analyzed and the cleanup criteria that will be used to assess whether the materials can be used for import soils.

- Petroleum hydrocarbons – RWQCB guidelines.
- VOC – RSLi and DTSC-SLs
- SVOCs and PAHs – RSLi and DTSC-SLs
- Metals – RSLi and DTSC-SLs
- Pesticides and PCBs – RSLi and DTSC-SLs
- Asbestos – less than detectable limits when analyzed by PLM.
- pH – Title 22.

6.2 During Grading and Excavation Activities

Once grading and/or excavation have begun, the following activities will be performed.

6.2.1 Dust and Odor Control

The General or Grading Contractor's health and safety field monitor will monitor grading operations for fugitive dust in accordance with SCAQMD Rule 403 Fugitive Dust and direct the General or Grading Contractor to take such measures, as necessary, such as the application of water or a change in operations or equipment in order to properly manage dust from leaving the site. Due to the type of possible contaminants present at the site, air monitoring for potential toxic materials on dust partials will not be warranted.

If impacted soil is discovered, Ardent will monitor grading operations for odors in accordance with SCAQMD Rule 402 and direct the General or Grading Contractor to take such measures, as necessary, such as the application of water or a change in operations or equipment in order to properly manage noticeable or nuisance odors from leaving the site.

As per Invesco's Monitoring Requirements, full-time monitoring will be completed. Ardent will monitor grading and excavation activities for visual signs of staining, odorous soils, or elevated VOCs as measured in accordance with Rule 1166 guidelines.

If impacted soils are discovered, excavated impacted soils that are stockpiled at the site will be placed on and covered with visqueen plastic. Wheel shakers will be installed at all entrances and exits from the site to ensure that soil will be removed from the tires of vehicles exiting the site.

6.2.2 Notification and Identification of Unknown Environmental Concerns

The SMP Field Coordinator will complete full-time monitoring of soils during the grading activities. Due to the number of environmental studies that have been completed at the site, there is a low likelihood that unknown environmental concerns will be encountered.

As previously stated, “unknown environmental concerns” are defined as regulated features (e.g. USTs, clarifier, etc.) or unregulated features (e.g. stained or odorous soil, or soil containing elevated VOCs as measured by a PID) that are discovered during redevelopment (i.e. “surprises”). If field observations (i.e., odors, staining, and/or elevated PID readings) indicate the possible presences of impacted soils (i.e. measurements between approximately 10 and 20 ppm as measured with a PID calibrated to hexane), additional characterization/sampling might be necessary. If a regulated feature or other condition requiring notification is discovered, the RWQCB will be notified and the appropriate permits will be obtained prior to the removal of the feature.

The monitoring activities discussed herein will be completed for all invasive soil disturbances, including grading activities, drilling soil borings, and excavating utility trenches. All unknown environmental concerns will be plotted on a scaled plan of the site using Global Positioning System (GPS), survey data, or measurements from surveyed points.

6.2.3 Cleanup Standards

Impacted soils will be mitigated to current human health based regulatory guidelines, such as Federal EPA, Region 9 RSLi or DTSC-SLs for industrial/commercial land use. If impacted soil exceeding these cleanup standards is to be left in-place, the material will be evaluated on an environmental and health risk basis (i.e. the

preparation of a risk-based analysis with incremental lifetime cancer risk no greater than 1×10^{-5} or a hazard quotient of one) based on a commercial land use criteria) or by using engineering controls.

6.3 Site-Specific Soil Management Protocols

The SMP Field Coordinator will monitor soils throughout the site on a full-time basis as discussed above. The soils will be monitored during grading activities for visual fugitive dust, staining, odors, and/or elevated PID readings. These monitoring activities will be conducted using visual, olfactory, and PID meter calibrated daily to hexane. The monitoring activities will be documented on Daily Field Logs. If impacted soil or unknown environmental concerns are encountered during redevelopment, the soil and/or features will be managed in accordance with this SMP.

As presented below, the Site-Specific Soil Management Protocols are grouped by the type of environmental concern and have been developed with acknowledgement of past site use history and previous subsurface investigations completed at the site. Soil samples collected as part of the SMP will be analyzed by a State-certified environmental laboratory.

6.3.1 Stained and/or Odorous Soil or Other Unregulated Feature

If stained or odorous soil is encountered or VOC-impacted soil with readings greater than 50 ppm as measured with a PID, the SMP Field Coordinator will notify the SMP Program Manager, who will notify the Owner's Project Director, and/or appropriate regulatory agencies as required.

6.3.2 Regulated Features

If a regulated feature such as a UST or clarifier is encountered, Ardent will be responsible to obtain the appropriate permits to remove the feature and will follow the regulatory guidelines set forth by the appropriate regulatory agency (i.e. the City of Burbank Fire Department).

6.3.3 Stockpile Sampling for Reuse or Export

Soils are not expected to be exported from the site during regular grading activities. If impacted soils are encountered that need to be removed from the site as part of a

mitigation measure, the materials will be sampled and tested for the appropriate parameters to meet the disposal profiling purposes.

6.4 Final Grading Environmental Oversight Report

The Final Grading Environmental Oversight Report will be prepared following completion of the grading and redevelopment activities and will document the monitoring activities and the results of the environmental issues discovered during grading activities, if any.

1 INTRODUCTION

This document presents the health and safety procedures that are intended to guide field activities for Trust property located in the in the city of Burbank, California (referred to herein as the “site” or “subject property”). The site includes three properties referred to as the “Portion of Former Lockheed Plant B6 Property,” the ‘Former Aviall Parking Lot Property,” and the “Former Pacific Airmotive Corporation (PAC) Property,” (collectively known as the “Trust Property”). The largest part of the site was formerly occupied by portions of the Lockheed Martin Corporation (Lockheed) Plant B6 facility, which was used for aircraft research, manufacturing, assembly, and maintenance. Other smaller portions of the site were used for aircraft engine maintenance and repair. Overton Moore Properties (OMP) is in the process of purchasing the site from the Burbank-Glendale-Pasadena Airport Authority (Airport Authority) and redeveloping the property for commercial use. The OMP Purchase and Sale Agreement includes a Land Use Covenant (LUC) which restricts the site land use to commercial/industrial. A number of environmental investigations have been completed at the site under the direction and oversight of the Regional Water Quality Control Board, Los Angeles Region (RWQCB). Following its review, the RWQCB issued no further action (NFA) letters. As part of the LUC, Ardent prepared a Soil Management Plan (SMP) to be implemented during redevelopment activities, which includes this Health and Safety Plan (HSP).

2 PROJECT SAFETY PERSONNEL

Ardent’s Program Manager is responsible for delivering the plan and any addenda to Ardent’s Field Coordinator. The Program Manager is responsible for distributing the plan to all field personnel and to an authorized representative of each firm that has a subcontract with Ardent to conduct on-site work. The Program Manager is also responsible for implementing the provisions of this plan and its addenda. Implementation includes review of HSP requirements, review of field personnel compliance with medical examination requirements, review of the provisions of this plan with Owners representative (and its subcontractors), field personnel involved with the project, provision for safety equipment specified in Subsection 5.4, and submission of the requisite health and safety documents, including the forms in Appendix A and Appendix B.

The Field Coordinator is responsible for assisting the Program Manager with on-site implementation of this HSP. His/Her responsibilities include: 1) maintaining safety equipment supplies, 2) performing air quality measurements as specified herein, 3) directing

decontamination operations and emergency response operations until public emergency personnel arrive on-site, 4) setting up work zone limits as specified herein, and 5) reporting all accidents, incidents, and infractions of safety rules and requirements to the Program Manager, General Contractor's Project Manager, and the Owner's Project Director.

The Field Coordinator has the authority to suspend work any time he judges that the provisions of the HSP are inadequate to provide a working environment conducive to worker safety, and he is to inform the Program Manager of any individuals whose on-site presence jeopardizes their own health and safety or the health and safety of others. The responsible personnel for this project are listed below.

Table 1 – Responsible Personnel for the Site

Title	Name	Daytime	After Hours
Program Manager	Paul Roberts	(951) 736-5334	(951) 751-3198

3 WORK DESCRIPTION

Ardent prepared this SMP to be used during grading activities to specify the manner and implementation of monitoring grading activities and to identify and properly manage unknown environmental concerns that might be encountered during site grading and development. Ardent will act as the environmental consultant and provide field oversight and management services for the SMP. Chemicals and materials used and/or stored at the site to support historical operations included aircraft fuels, biocides, descalers, fuel oils, gasoline, paints, solvents, acids, caustics, and plastic resins and hardeners. A human health risk assessment was completed and based on the results, there is a low likelihood that a human health risk due to vapor intrusion is present, however, residual concentrations of metals (i.e. chromium), petroleum hydrocarbons, polychlorinated biphenyls (PCBs) and volatile organic compounds (VOCs) may be present in the soil due to historical use of the property. On an intermittent and/or as-needed basis, Ardent representatives will complete on-site monitoring during grading activities as part of the SMP. These monitoring activities will include field observations (i.e., odors, staining, and/or photoionization detector [PID] readings) of soil during redevelopment. If

significant impacted soil is encountered, Ardent representatives may need to collect samples. During monitoring activities, Ardent personnel will have current HAZWOPER health and safety training. During monitoring, ambient air quality within the work zone will be monitored for potentially hazardous materials (e.g., VOCs) using a PID or equivalent equipment calibrated to meet the requirements of the South Coast Air Quality Management District (SCAQMD) guidelines.

4 HAZARD ASSESSMENT

The following subsections include potential hazards that may be present at the site or created as a result of the operations being conducted at the site.

4.1 Confined Spaces

A "confined space" is defined by the United States Department of Health and Human Services as a space that has one of the following characteristics:

- Limited openings for entry and exit, such as tanks, tunnels, vaults, etc.,
- Not designed for continuous worker occupancy, or
- Unfavorable natural ventilation or other hazards.

Work will not be conducted in confined space as defined by 29 Code of Federal Regulations (CFR) 1910.146. Excavations greater than 4 feet deep will not be entered.

4.2 Chemical Hazards

According to historical land use and information obtained from previous investigations at the site, residual concentrations of metals, petroleum hydrocarbons, PCBs, and VOCs may be encountered.

4.3 Inhalation Hazard

Although not expected, the vapor concentrations that may potentially be encountered during field activities may exceed currently published exposure limits. The following table provides guidelines as to the action required in response to a range of corresponding PID measurements of some of the most conservative chemical compounds that might be

encountered. The measurements will be collected in the ambient air in the breathing zone of personnel working in the area. The PID must be equipped with an electron-volt (eV) bulb of 10.2 or greater.

Table 2 – Monitoring Methods and Action Levels for Volatile Organic Compounds Using Screening Survey Instruments

Chemical	Routes of Entry	Respirator Protection Required	Stop Work	TLV	OSHA PEL
TCE	Inhalation, Dermal	OVA = >5 ppm	OVA = >100 ppm	50 ppm as TWA	100 ppm
PCE	Inhalation, Dermal	OVA = >5 ppm	OVA = >100 ppm	25 ppm as TWA	100 ppm

Notes:
 If concentrations at or above the stop-work thresholds are encountered, work must cease and the SMP Program Manager and Corporate Health and Safety Director must be contacted to render judgment whether more stringent respiratory protection is required and extension of the restricted access work zone is necessary.
 TWA – Time-Weighted Average concentration for a normal 8-hour work day and a 40-hour work week, to which nearly all workers may be repeatedly exposed, day after day, without adverse effect.
 ppm – Parts per million. For inhalation exposure, the exposure concentration is measured in the breathing zone of the individual (i.e., within 3 inches of the nose and mouth).
 ACGIH – American Conference of Governmental Industrial Hygienists.
 TLV – Threshold Limit Value. The time-weighted concentration for a normal 8-hour workday and a 40-hour work week, to which nearly all workers may be repeatedly exposed, day after day, without adverse effect.
 OSHA PEL – Occupation Safety and Health Administration Permissible Exposure Limit. Based on 5-minute maximum peak in any 3-hours.

4.4 SCAQMD Monitoring

If VOC-impacted soils are discovered during the grading activities (with PID measurements greater than 50 ppm), continuous monitoring of the grading activities may be necessary. If continuous monitoring becomes necessary, Ardent will use its SCAQMD Various Locations Rule 1166 Soil Mitigation Plan (aka Various Sites Permit) to continuously monitor grading activities.

4.5 Dermal Exposure Hazard

Contact of sufficient duration to cause significant skin absorption of toxic components is judged to be highly unlikely. Repeated daily or prolonged contact with the chemicals listed in Subsection 4.2 may potentially defat the skin and, over a long period of time, can lead to irritation and dermatitis. For this reason, wearing protective gloves and clothing as specified in Subsection 5.4 should minimize direct skin contact with chemicals potentially present.

However, if dermal contact does occur, the exposed areas should be washed with soap and water immediately and rinsed thoroughly.

4.6 Explosion and Fire Hazard

Explosion hazards are not expected at the site during the planned operations. However, caution will be taken to minimize sources of ignition. Cigarettes and open flames are prohibited within the restricted access work zone (Subsection 5.3).

4.7 Noise Hazard

Exposure to high levels of noise, both chronic and acute, can lead to different types of reactions. Acute (impulse) noise, such as noise associated with heavy equipment operation, jackhammers, drilling activities, and work performed in the flight path of aircraft, can afflict the operator with a temporary loss of hearing at certain frequencies associated with the equipment being used. Ordinarily, this loss is reversible, and after a short period of time (less than a day) the hearing will return to normal. However, chronic exposure to this noise may eventually cause the hearing acuity to be permanently and irreversibly altered. The change may be subtle and could occur over a period of time.

Permanent noise-induced hearing loss is attributed to the intensity and frequency distribution of the noise, the time pattern and duration of exposure, and individual susceptibility. Sound levels (noise) are measured in decibels using an A-weighting filter (dB [A]). The Threshold Limit Values (TLV) for noise exposure is 85 dBA for an eight-hour duration and 90 dBA for a four-hour duration. It is not expected that the noise level generated during this phase of work will exceed the TLV; however, hearing protection will be readily available on the site and will be mandated at SHSO discretion.

4.8 Heat Stress Hazard

Heat stress occurs when the body produces or absorbs more heat than it is able to dissipate. Heat is produced internally as the result of metabolic activity and increases with body activity or the level of physical work being performed. Heat can be absorbed by the body from ambient air and from the radiant heat of the sun.

The body's ability to absorb heat is therefore affected by factors such as the ambient air temperature and humidity, air density, radiant energy and cloud cover, wind velocity and airflow, and localized heat generation, such as that from power equipment. The body's ability to dissipate heat to the environment is dependent on factors such as the amount of heat and radiant energy in the ambient environment, exposure to the ambient or radiant heat in that environment, and its own inherent ability to cool itself (perspiration). Exposure to ambient conditions is affected by such factors as wind velocity or airflow, cloud cover or shade, and the type of protective clothing being worn. Its ability to cool itself is affected by its own inherent biovariability.

Any of these factors may contribute to a loss of body fluids and electrolytes, and an increase in body temperature. A significant increase in body temperature can be life threatening and can rapidly become fatal or result in permanent injury. Heat stress may cause any of the following conditions: heat cramps, heat syncope (fainting), heat exhaustion, and/or heat stroke. If one of these conditions is experienced, call emergency service personnel immediately. To help prevent heat stress, it is recommended that liquids be easily available and frequently consumed during the day. The SHSO will monitor workers visually during site work including body core temperature measurements when and if appropriate. Table 3 presents the action levels and appropriate action to be taken regarding body core temperature monitoring.

Table 3 – Action Levels for Heat Stress

Type Measurement	Action Level	Action
Ear insertable core temperature	100.4 degrees Fahrenheit or greater	Remove from work
Ear insertable core temperature	<99 degrees Fahrenheit	Return to work

4.9 Electrical Hazard

Contact with electrical current can cause shock and electrical burns and can be instantly fatal. The potential for exposure to electrical current exists through contact with electrical tools or equipment, generators and electrical control equipment, and overhead and underground power lines. Care must be taken to avoid contact with sources of electricity. Work will cease if lightning is observed or expected to occur.

Frayed electrical cords or electrical cords with damaged plugs shall not be used. Electrical cords shall not be used in proximity to water.

4.9.1 Underground Utilities

Prior to starting soil intrusive activities, all known underground utilities and lines shall be located and marked on the ground and on a site map. Locator services from Underground Service Alert (USA) and each utility company whose utility service may intersect the facility shall be requested. Soil intrusive work shall not proceed until all locating activities have been completed and are fully documented in the site records. The initial site safety orientation meeting for all personnel working on-site shall include a review of the underground utility locations and where the site map will be located that shows the positions of any underground utility lines. The site safety orientation shall include a site walkover of each marked utility or line.

During the performance of work, should personnel encounter a subsurface condition that creates suspicion that there may be an unidentified underground line or utility, such an individual shall immediately cease work, secure his/her equipment, and notify the General Contractor, Program Manager, and Field Coordinator.

4.9.2 Overhead Power Lines

Operation of equipment in the vicinity of overhead power lines shall be in accordance with California Occupational Safety and Health Administration (Cal-OSHA) Electrical Safety Orders. The subcontractor's field supervisors and operators shall take necessary precautions for implementing safe work practices under such conditions. The following information was excerpted from the Cal-OSHA Electrical Safety Orders.

Table 4 indicates the general clearances from electrical lines for personnel and erection, handling, or transportation of tools, machinery, materials, structures, or scaffolds from overhead high-voltage power lines. Table 5 indicates the general clearances for equipment such as drill rigs, cranes, and hoists.

Table 4 – General Clearances Required from Energized Overhead High-Voltage Conductors

Normal Voltage (Phase to Phase)	Minimum Required Clearance (feet)
600 to 50,000	6
50,000 to 345,000	10
345,000 to 750,000	16
750,000 to 1,000,000	20

Table 5 – Boom-Type Lifting or Hoisting Equipment Clearances Required from Energized Overhead High-Voltage Lines

Normal Voltage (Phase to Phase)	Minimum Required Clearance (feet)
600 to 50,000	10
50,000 to 75,000	11
75,000 to 125,000	13
125,000 to 175,000	15
175,000 to 250,000	17
250,000 to 370,000	21
370,000 to 550,000	27
550,000 to 1,000,000	42
Notes: Authority cited: Section 142.3, Labor Code. Reference: Section 142.3, Labor Code.	

4.10 Excavation Site Hazards

The movement of grading equipment, tractors, backhoes, and trucks in the work zone, as it relates to the hazards associated with an excavation site, such as the cave-in of an excavation, requires a high awareness of safety on the part of the equipment operators. The subcontractors are expected to make sure that all of their operators at the site are experienced in excavations and are aware of the excavation site hazards. The boundary of

the site is to be fenced, and movement of unauthorized personnel within the work zone prevented. The boundary of the site is to be clearly posted with the appropriate warning signs. Excavations greater than 4 feet will not be entered.

4.11 Activity Hazard

The principal type of activity hazard expected to be encountered during this operation includes the potential for falls, and adverse contact with tools and equipment. The experience of personnel with this type of equipment and the procedures outlined in this HSP should minimize potential safety hazards of this type. In addition, the safety equipment listed in Subsection 5.4 that is required to be used for this operation should minimize the potential for injury to personnel.

4.12 Heavy Equipment Operations

As heavy equipment operations are to be conducted at the site, all haulage, drilling, and earth moving shall, at a minimum, comply with the requirements set forth in Title 8, California Code of Regulations (CCR) Construction Safety Orders. As a part of the initial site safety orientation meeting (Subsection 5.2), equipment operators and any personnel (including foreman, supervisor, surveyors, grade checkers, etc.) associated with haulage and earth moving activity shall carefully review these regulations and any other site-specific requirements. It is the responsibility of the subcontractor to monitor its personnel for compliance with these regulations and requirements. In particular, the following guidelines are to be followed by those involved with haulage and earth moving.

- Subcontractor-authorized personnel, trained in and familiar with the equipment, its operation, and safety provisions, will perform operations.
- Maintenance and/or adjustments to machinery will not be conducted while the equipment is operating or energized, unless continued operation is necessary in accordance with the machinery manufacturer's written specifications. All repairs will be performed in a designated equipment-repair work zone. Power will be disconnected or engines shut off prior to servicing equipment unless continued operation is necessary in accordance with the machinery manufacturer's written specifications. Power supplies/switches will be clearly labeled as such, to prevent accidental startup. Equipment being repaired will be appropriately blocked and/or secured.
- Only equipment with all guards and safety controls in place are to be permitted by the subcontractor to operate on-site.

- Equipment is to meet all federal, state, and local standards and be mechanically sound and in good condition.
- Operators will perform daily safety inspections and necessary repairs are to be made before equipment is operated. If any equipment is judged to be unsafe during operation, it is to be taken out of service until it is repaired.
- When not in use, keys to equipment are to be removed and kept in a location remote from the equipment.

4.13 Subsurface Earth Work

With the exception of the planned grading and redevelopment activities, excavation activities associated with impacted soils are not planned for the site. However, if encountered, excavation of some impacted soils may be necessary. If excavation is completed, the following will be conducted.

At a minimum, all excavation activity conducted by subcontractors or the Contractor shall comply with the requirements set forth in Title 8, CCR, Construction Safety Orders. All bank, grades, and excavation walls shall be sloped to an angle of less than the angle of repose (but at no time at an angle of less than allowed in the regulations for the existing soil conditions) for the type of soil; alternatively, the excavation can be shored in accordance with applicable regulatory requirements. Trenches and pits more than 5 feet deep, and the bases of excavation embankments more than 5 feet high, will be considered hazardous areas, with no entry permitted unless the slope or shoring requirements have been met.

5 GENERAL HEALTH AND SAFETY REQUIREMENTS

5.1 Medical Clearance and Monitoring

All project personnel who may be required to wear respirators must have on file evidence that they have been cleared by a physician to wear a respirator. All personnel under subcontract to Ardent must also provide this evidence to the Field Coordinator (upon request). All employees of Ardent are to be active participants in the Contractor Medical Surveillance Program.

5.2 Safety Orientation Meeting

All field personnel must attend a safety orientation meeting before commencing the fieldwork. The meeting will be scheduled and conducted by the Program Manager or the Field Coordinator. The meeting will include presentation of the SMP and receipt of the required signed releases by the Field Coordinator.

5.3 Restricted Access Work Zone

A restricted access work zone (a minimum of 25 feet wide when possible) will be maintained around the work areas. Due to site conditions and constraints, it may be necessary to make modifications to the width/circumference of the restricted access zone. The Field Coordinator has the authority to make reasonable adjustments as he/she judges necessary. Protective clothing and equipment, as described below in Subsection 5.4, are to be worn by all personnel working within the restricted access work zone. The purpose of the restricted access work zone is to provide points of ingress and egress for personnel and equipment. The zone is to be demarcated with caution/hazard tape and barricades (or similar restricting material). The restricted access work zone is to be clearly labeled as such. In addition to the restricted access work zone, a gate should restrict vehicular access to the site when possible.

5.4 Protective Equipment and Clothing

5.4.1 Equipment Required For Field Personnel While Working in the Restricted Access Work Zone

Personnel working within the restricted access work zone are to wear the following equipment unless otherwise specified in writing by the Corporate Health and Safety Manager and/or the Program Manager.

- Hardhat
- Boots (steel-toed)
- Safety glasses
- Gloves (latex and/or nitrile)

Equipment to be Available On-Site

- First Aid Reference Guide
- Earplugs
- Two respirators (National Institute of Occupational Safety and Health/Mine Safety and Health Administration (NIOSH/MSHA)-approved half-mask with organic vapor cartridges)
- PID and calibration gas
- First-aid kit with eye wash
- Fire extinguisher
- Construction tape and barriers to delineate restricted access work zone
- Water and soap for washing
- A vehicle with keys in the ignition and headed in a direction for quick departure for the transport of slightly injured personnel to the hospital must be kept on-site when personnel are working. Severely injured personnel **MUST** be transported **ONLY** by paramedics (except as permitted in Subsection 7.1). A copy of the hospital address and route directions from Subsection 7.5 must remain in the vehicle.

5.4.2 Respirator Usage

The Program Manager is responsible for deciding if respiratory protection is required and if the level of respiratory protection used should be more stringent. If a decision is made to base respirator selection on PID measurements, refer to the table in Subsection 4.3 for critical concentrations. Subsection 6.1 presents organic vapor monitoring frequency and duration.

The conditions in Subsection 5.1 are to be complied with. Cartridges for the respirators must be replaced daily or when breakthrough occurs, whichever occurs first. All individuals intending to wear respirators need to be fit-tested or provide evidence of fit testing.

5.4.3 Buddy System

All field personnel while working in the restricted access work zone during the field activities are to work with another person at the site. The subcontractor's representative can serve as the second person while the work is being conducted in

the field. Under no circumstances, other than completion of paper work at the end of the day, are field personnel to work alone at the site while conducting field activities.

6 ORGANIC VAPOR MONITORING

6.1 Exposure Concerns

In addition to the monitoring requirements established by SCAQMD during any excavation work, organic vapor concentrations (as measured by the PID) in the breathing zone (the area nearest to the individual's mouth) of the individual working nearest to the potential vapor source must be monitored during field operations. Monitoring, using the PID, should be conducted at approximate 15-minute intervals, for a sampling duration of approximately 60 seconds while work is being conducted. Occasionally, the monitoring frequency may be modified at the discretion of the Field Coordinator due to changes in field activities. All measurements, as well as the time of day the measurements were collected, must be documented. A form that can be used to document these measurements is presented in Appendix C. Daily field logs can be used to document these measurements also. Refer to Subsection 4.3 for guidelines to judge when respiratory protection is necessary based on PID measurements.

7 EMERGENCY RESPONSE PROCEDURES

7.1 Physical Injury

In the event of an accident resulting in physical injury, call emergency service personnel immediately and perform first aid commensurate with training and seriousness of the injury. Severely injured personnel are to be transported only by emergency service personnel and/or by ambulance personnel unless a life-threatening condition is judged to exist that must be addressed immediately. If emergency or ambulance personnel transport injured personnel to the hospital, the hospital will be selected at the discretion of the emergency or ambulance personnel. The hospital selected may or may not be the hospital listed in Subsection 7.5 of this document. At the hospital, a physician's attention is mandatory regardless of how serious the injury appears.

The Program Manager is to be notified by the Field Coordinator, as soon after the injury as practical, regarding the nature of the accident. A written report is also to be prepared and submitted by the Field Coordinator to the Program Manager within 24 hours of the accident. If the Field Coordinator is unable to make the report (due to injury), an individual designated by the Program Manager shall make the report.

7.2 Fire, Explosion, and Property Damage

In the event of a fire or explosion, notify the fire department immediately by dialing 911.

The Program Manager is to be notified by the Field Coordinator as soon as practical and a written report prepared within 24 hours of the accident.

In the event of any accident involving serious injury of sufficient magnitude, work at the site shall cease until the Corporate Health and Safety Manager and/or the Program Manager (or a designee) has completed a review of the events and site conditions and has authorized work to resume.

7.3 Emergency Telephone Numbers

Fire Department	911
Police Department	911
Paramedics	911

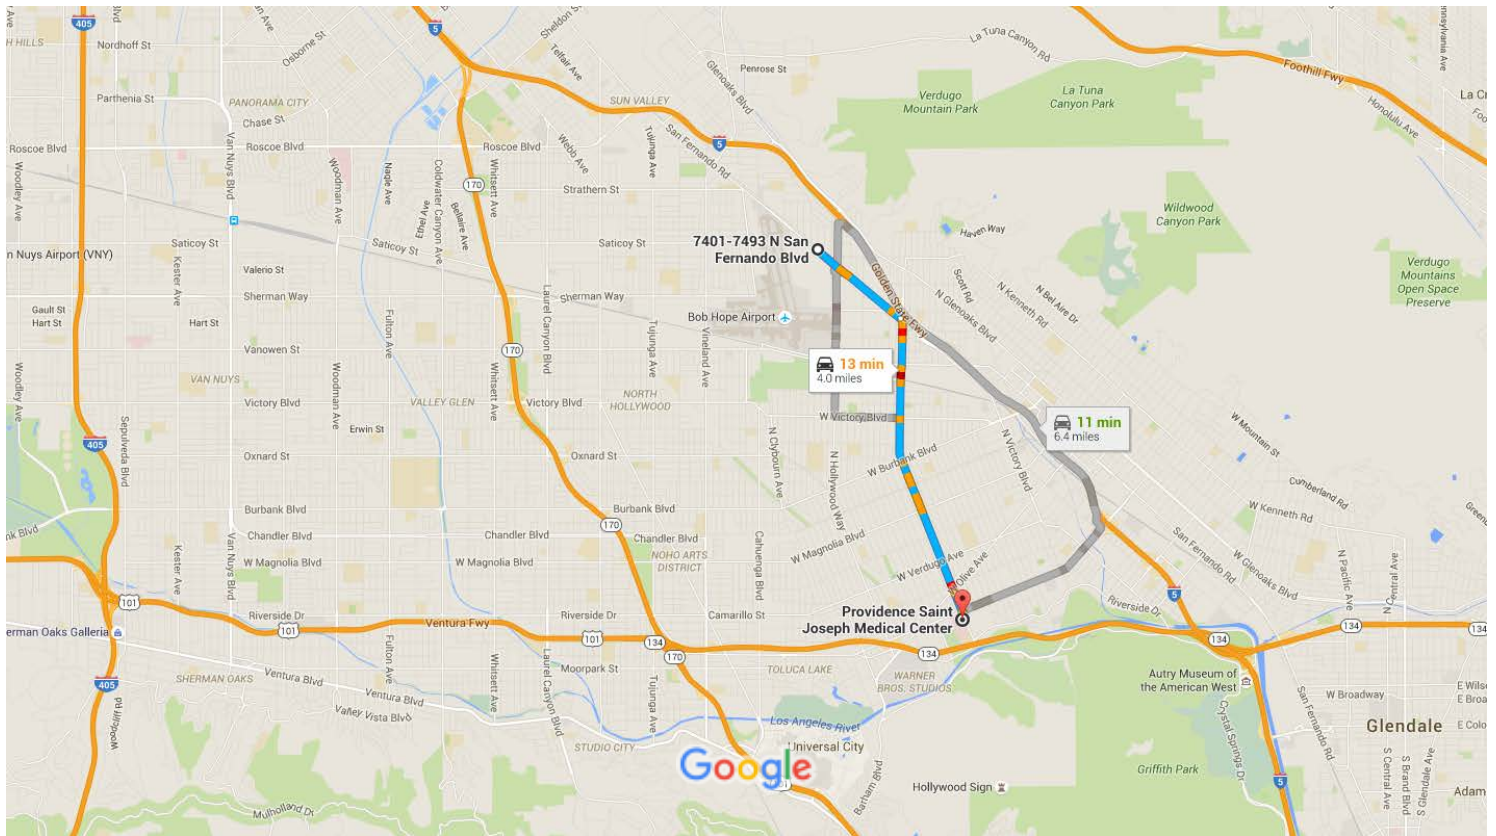

7.4 Work Site Address

The site is located at Trust Property in Burbank, California.

7.5 Hospital Address and Route

For hospital routes, see attached map from Google Maps.

Providence Saint Joseph Medical Center
501 S Buena Vista St.
Burbank, California 91505
Telephone: 818-843-5111

Map data ©2016 Google 1 mi

7401-7493 N San Fernando Blvd

Sun Valley, CA 91352

501 South Buena Vista Street, Burbank, CA 91505

These directions are for planning purposes only. You may find that construction projects, traffic, weather, or other events may cause conditions to differ from the map results, and you should plan your route accordingly. You must obey all signs or notices regarding your route.

APPENDIX A

HEALTH AND SAFETY COMPLIANCE AGREEMENT

Copy: _____

CONTRACTOR HEALTH AND SAFETY COMPLIANCE AGREEMENT

Project Name: _____

I, _____ (PRINT NAME), have received a copy of the entire Health and Safety Plan for the above-referenced project. I have read the plan, understand it, and agree to comply with all of the health and safety requirements. I understand that I may be prohibited from working on the project for violating any of the requirements.

I have been approved to wear a respirator by a physician based on medical examination. I have been trained in the appropriate use, care, and storage of respiratory equipment. I have been respirator fit-tested, and I will have my respirator available for use in the field. I understand that I am to use the equipment supplied to me by my employer. I further understand that this equipment is provided solely for my benefit with the intent to minimize my exposure to potentially hazardous conditions. In the event of such usage, I agree to indemnify and hold harmless Contractor and all of its employees from and against any and all losses, demands, claims, liabilities, lawsuits, damages, costs, and expenses arising, in any way, from the use of the equipment.

Visitors will not receive a copy of the Health and Safety Plan but will be required to review it. It is required that visitors be escorted in the restricted access work zone. Visitors must comply with the Contractor escort directions while on-site at all times. Non-compliance with escort directions will not be tolerated, and violators will be requested to leave the site immediately.

Thank you for your cooperation.

APPENDIX B

**SCAQMD RULE 1166 AND
INVESCO'S ENVIRONMENTAL MONITORING REQUIREMENTS**

APPENDIX B

Invesco's Environmental Monitoring Requirements

This exhibit establishes standard requirements for observation and monitoring of projects that involve the removal of pre-existing facility features to facilitate site preparation for construction of new projects. Although specific provisions may vary on a per-project basis, the fundamental concepts are universal and should be applied to each project in a rational manner.

1. Environmental monitoring shall occur on a full-time, continuous basis during site work including, but not limited to:
 - Removal of piping, pumps, tanks, vessels, or other equipment previously used for, or conducive to storing or handling, chemical fluids or powders.
 - While removing building slabs, pavements, parking surfaces, walkways, or other flatwork.
 - During exposure or removal of grade-level or subsurface utilities, or sumps, pits, drains, trenches, piping, or containers previously used for or conducive to storing or handling chemical fluids or powders.
 - During geotechnical borings, pits, or other exploration.
 - During earthwork including clearing & grubbing, excavation, filling, recompaction, or general land contouring.
 - During excavation for placement of foundations, subsurface utilities or other in-ground work.

2. Environmental monitoring shall be conducted by field personnel considered by the designated environmental professional responsible for the project¹, to be sufficiently qualified and who will work under the supervision of and direction by that professional. The designated professional shall, at times and locations deemed appropriate in his professional capacity, personally visit the project site.

3. Specific field monitoring shall include, but not be limited to, the following tasks:
 - Observe and screen soil, exposed water, equipment, building materials, and other appurtenances for indications of the presence or of ongoing or prior discharges of petroleum or hazardous substances based on discoloration, odor, or other field screening methods appropriate, in the opinion of the designated professional, to the suspected materials (i.e. organic vapor headspace screening for volatiles, XRF for metals, colorimetric indicator kits, etc.).

¹ This individual must be a single named individual licensed, registered, or otherwise designated as acceptable to Invesco.

- Identify and document the location² of each known or suspected discharge or potential source of affected media³.
 - Observation shall be documented in daily written logs/reports augmented by photographs and sketches with emphasis on conditions of environmental significance.
4. In addition to the locations called out in the following paragraphs, sewer⁴ piping removal shall be documented with sampling and analysis of soil and shallow groundwater for the potential presence of petroleum or hazardous substances:
- Each location of likely discharge (evident by screening methods previously mentioned) shall be documented and sampled.
 - Each oil-water separator, clarifier, grease trap, or other similar structure shall be documented and sampled
 - Each location of piping break, damage, or discontinuity shall be documented and sampled.
 - At a minimum, sampling shall be conducted at no fewer than one location per 50-feet along the length of all piping.
5. Suspected discharge locations or potential sources shall be assessed, and affected media delineated, both vertically and horizontally, through sampling and analysis of the source material/ area, and underlying/ surrounding unaffected soil (if present) augmented by sampling and analysis of shallow groundwater representative of the identified areas.
- Analytical parameters shall include those substances most likely to be present based on the collective information gained from observation, field screening, prior sampling and analysis, and assessment of former operations at that location.
 - Each area shall be delineated to unrestricted use standards (as defined in footnote³).
 - The location and extent of each area of remaining petroleum or hazardous substances shall be documented.
6. The consultant will notify Invesco of the presence of affected media and will comply with all applicable laws that govern the investigation and remediation of discharges reportable under local, state, or federal rules, regulations, or laws.

² Locations of soil conditions and objects shall be documented at a level of precision of one-foot horizontally and vertically.

³ “Affected media” includes waste, water, soil, or soil-like solids exceeding default numerical criteria for unrestricted land use established by the applicable state agency.

⁴ This requirement is intended for process sewers but may include sanitary sewers where segregation is not known to have been entirely complete.

7. Imported soil or other fill materials being imported shall be evaluated and documented, including at a minimum, as to:
 - Source.
 - Expected composition or potential to be affected media.
 - Confirmed with sampling and analysis for those substances considered most likely to be present based on the collective information.

8. Affected media not meeting project-specific criteria shall be removed and/or properly treated or disposed off-site:
 - Post-removal sampling and analysis shall be conducted for each removal area.
 - The lateral and vertical extent of removed materials and locations of confirmation samples shall be documented.
 - Off-site shipment of affected media shall be documented with manifests showing classification and disposition.

9. Soil being exported, materials being recycled, or waste being disposed off-site shall be classified with waste profiles and disposal facility approval documentation reviewed in advance by Invesco prior to shipping off-site. Copies of manifests or other shipping documentation for each load shall be provided to and retained by the on-site field representative for compilation into an inventory and included with daily field reports.

10. At the conclusion of the project a comprehensive written report shall be prepared including, but not limited to:
 - Compilation of daily reports.
 - Compilation of manifests.
 - Compilation of documented conditions warranting regulatory reporting and corresponding response action outcome.
 - Scaled map showing locations of all samples and affected/ remediated areas.
 - Scaled map showing locations of all former grade-level or subsurface utilities, or sumps, pits, drains, trenches, piping, or containers previously used for or conducive to storing or handling fluids or powders.
 - Copy of final regulatory closure documentation (as may be applicable).
 - Narrative report bearing signature of the designated environmental professional with supporting information and rationale for opinion of property condition.

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

**RULE 1166 -- VOLATILE ORGANIC COMPOUND EMISSIONS FROM
DECONTAMINATION OF SOIL**

(Adopted August 5, 1988)(Amended July 14, 1995)(Amended May 11, 2001)

(a) Applicability

This rule sets requirements to control the emission of Volatile Organic Compounds (VOC) from excavating, grading, handling and treating VOC-contaminated soil as a result of leakage from storage or transfer operations, accidental spillage, or other deposition.

(b) Definitions

- (1) EXCAVATION is the process of digging out and removing materials, including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.
- (2) GRADING is the process of leveling off to produce a smooth surface including the removal of any material necessary to that process such as asphalt and concrete necessary to expose known VOC contaminated soil.
- (3) SOIL DECONTAMINATION MEASURE is any process approved by the Executive Officer to remediate, destroy, remove, or encapsulate VOC and VOC-contaminated soil.
- (4) UNDERGROUND STORAGE TANK means any one or combination of tanks, including pipes connected thereto, which is used for the storage of organic liquid which is more than 50% beneath the surface of the ground.
- (5) VOC CONTAMINATED SOIL is a soil which registers a concentration of 50 ppm or greater of Volatile Organic Compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.
- (6) VOC CONTAMINATED SOIL MITIGATION PLAN is a plan to minimize VOC emissions to the atmosphere during excavation and any subsequent handling of VOC-contaminated soil.

- (7) VOLATILE ORGANIC COMPOUND (VOC) is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds are defined in Rule 102—Definition Of Terms.
 - (8) VOLATILE ORGANIC MATERIALS include gasoline, diesel, crude oil, lubricant, waste oil, adhesive, paint, stain, solvent, resin, monomer, and/or any other material containing VOC.
- (c) Requirements
- (1) A person excavating an underground storage tank and/or transfer piping storing or previously storing VOC materials, or excavating or grading soil containing VOC materials shall:
 - (A) Apply for, obtain and operate pursuant to a mitigation plan approved by the Executive Officer prior to commencement of excavation or handling. The mitigation plan general requirement and application requirements are found in Attachment A to this rule. A copy of the approved plan must be on site during the entire excavation period.
 - (B) Notify the Executive Officer at least 24 hours prior to excavation using a form approved by the Executive Officer which is fully completed.

If the excavation does not commence on start date, renotification is required.

An alternative notification procedure may be authorized for multiple excavations within a single facility, with prior written approval from the Executive Officer.
 - (C) Monitor for VOC contamination pursuant to subdivision (e), at least once every 15 minutes commencing at the beginning of excavation or grading and record all VOC concentration readings in a format approved by the Executive Officer; and
 - (D) When VOC-contaminated soil is detected during excavation or grading:
 - (i) Implement the approved mitigation plan (Attachment A).
 - (ii) Notify the Executive Officer within 24 hours of detection of VOC-contaminated soil.

- (iii) Monitor and record VOC concentration readings as prescribed in the plan. Monitoring records must be kept available on site.
 - (iv) Keep calibration records for all monitoring instruments available on site.
- (2) A person handling VOC-contaminated soil at or from an excavation or grading site shall:
 - (A) Segregate VOC-contaminated stockpiles from non-VOC contaminated stockpiles such that mixing of the stockpiles does not take place.
 - (B) Spray VOC-contaminated soil stockpiles with water and/or approved vapor suppressant and cover them with plastic sheeting for all periods of inactivity lasting more than one hour.
 - (C) Conduct a daily visual inspection of all covered VOC contaminated soil stockpiles to ensure the integrity of the plastic covered surfaces. A daily inspection record must be maintained on site.
 - (D) Comply with the provisions in subparagraph (c) (1)(A) and clause (c)(1)(D)(i).
 - (E) Maintain a record of the identification and business addresses of the generator, transporter and storage/treatment facilities. Such record shall be signed by each party at the time custody is transferred.
 - (F) Treat or remove contaminated soil from an excavation or grading site within 30 days from the time of excavation.
- (3) If the VOC concentration in the excavated soil is measured at greater than 1000 ppm, spray the soil with water or vapor suppressant and:
 - (A) As soon as possible, but not more than 15 minutes, place the soil in sealed containers, or
 - (B) As soon as possible, but not more than 15 minutes, load into trucks, moisten with additional water, cover and transport off site, or
 - (C) Implement other alternative storage methods approved in writing by the Executive Officer.

- (4) A person treating VOC-contaminated soil shall:
 - (A) Obtain a permit to construct and operate treatment equipment, as applicable, from the Executive Officer, and
 - (B) Implement VOC-contaminated soil decontamination measures, as approved by the Executive Officer in writing, which result in Best Available Control Technology applied during all segments, and which include, but are not limited to, at least one of the following:
 - (i) Installation and operation of an underground VOC collection system and a disposal system prior to excavation.
 - (ii) Collection and disposal of the VOC from the excavated soil on-site using equipment approved by the Executive Officer.
 - (iii) Any equivalent VOC-contaminated soil control measure previously approved in writing by the Executive Officer.
- (5) A person shall not engage in or allow any on-site or off-site spreading, grading or screening of VOC-contaminated soil, which results in uncontrolled evaporation of VOC to the atmosphere.
- (6) Loading trucks for contaminated soil must meet the following:
 - (A) The truck and trailer shall be adequately tarped prior to leaving the site; no excavated materials shall extend above the sides or rear of the truck or trailer to prevent soil spillage during transport, and
 - (B) The exterior of the truck, trailer and tires shall be cleaned off prior to the truck leaving the site.
- (d) Exemptions
 - (1) The provisions of this rule shall not apply to the following:
 - (A) Excavation, handling, and treating of less than one (1) cubic yard of contaminated soil.
 - (B) Removal of soil for sampling purposes.
 - (C) Accidental spillage of five (5) gallons or less of VOC containing material.

- (2) The provisions of paragraphs (c)(1) and (c)(2) shall not apply to soil excavation or handling as a result of an emergency as declared by an authorized health officer, agricultural commissioner, fire protection officer, or other authorized agency officer. Whenever possible, the Executive Officer shall be notified by telephone prior to commencing such excavation. The Executive Officer shall be notified in writing no later than 48 hours following such excavation. Written notification shall include written emergency declaration from the authorized officer.
- (e) Test Methods
- (1) A person shall measure excavated soils for volatile organic compounds to determine contamination by:
 - (A) Using an organic vapor analyzer calibrated with hexane, complying with 40 CFR Part 60 Appendix A, EPA Reference Method 21 Section 3 or any equivalent method with prior approval in writing by the Executive Officer. If other calibrating gases are used, then the measured readings shall be correlated to and expressed as hexane.
 - (B) Placing the probe inlet at a distance of no more than three inches from the surface of the excavated soil and while slowly moving the probe across the soil surface, observe the instrument readout. If an increased meter reading is observed, continue to sample the excavated soil until the maximum meter reading is obtained. Leave the probe inlet at this maximum reading location for approximately double the instrument response time. If the maximum observed meter reading is greater than the 50 ppm standard in the regulation, record and report the results.
 - (2) The presence of VOC in stored or spillage materials shall be determined by SCAQMD Method 313 [Determination of Presence of Volatile Organic Compounds (VOC) in Headspace] and/or Method 304 (Determination of Volatile Organic Compounds in Various Materials) contained in the SCAQMD "Laboratory Methods of Analysis for Enforcement Samples" manual.

(f) Enforcement

- (1) Violation of any provision of this rule or the violation of the approved mitigation plan shall be grounds for the Executive Officer to amend or revoke the mitigation plan, in addition to penalties provided by the Health & Safety Code.
- (2) If the owner or operator is served with a Notice of Violation for creating a public nuisance, the owner or operator shall suspend operation until the public nuisance is mitigated to the satisfaction of the Executive Officer.

ATTACHMENT A
GENERAL MITIGATION PLANS REQUIREMENTS

VOC Contaminated Soil Mitigation Plans shall be written to minimize VOC emissions to the atmosphere during excavation, grading, handling and treatment of VOC contaminated soil. VOC Contaminated Soil Mitigation Plans shall consist of three types: Various Locations, Site Specific and Facility Treatment.

- (1) General Requirements
 - (A) A plan is not transferable.
 - (B) A person responsible for the excavation, grading or handling of VOC contaminated soil must be completely familiar with the plan and must adhere to the plan requirement. The Executive Officer may require that the plan be signed by the owner and/or operator.
 - (C) A plan may be amended upon renewal.
 - (D) Permission to excavate, grade or handle VOC contaminated soil may be withdrawn by the District upon a finding by the Executive Officer that the excavation, grading or handling of the VOC contaminated soil is causing a public nuisance or violating other AQMD rules or regulations.
- (2) Various Location Plans:
 - (A) Shall be limited to the excavation of 2000 cubic yards or less of VOC contaminated soil in any consecutive 12 month period at the same site.
 - (B) Shall not be used in conjunction with any other various location plan at the same site within a consecutive 12-month period.
 - (C) Shall expire after one year from issuance unless renewed.
 - (D) Shall not be issued for nor used for operations that involve grading, soil treatment or remediation, or landfills.
- (3) Site Specific Plans:
 - (A) Shall be for excavation of greater than 2000 cubic yards of VOC contaminated soil.
 - (B) Shall be issued for specific excavation or grading locations for a period not to exceed two years.
 - (C) Shall not be renewable.

- (4) Facility Treatment Plans:
 - (A) Shall be issued for a treatment facility at a permanent location.
 - (B) Shall expire after one year from issuance unless renewed.
- (5) Applications for Site Specific Plans shall contain as a minimum:
 - (A) Reasons for excavation or grading.
 - (B) Cause of VOC soil contamination and history of the site.
 - (C) Description of tanks or piping associated with the soil contamination.
 - (D) An estimate of the amount of contaminated soil.
 - (E) The operating schedule for excavation and removal.
 - (F) Description of how the excavation or grading will be conducted.
 - (G) Description of mitigation measures for dust, odors and VOC.
 - (H) Details of disposal of VOC contaminated soil, including the ultimate receptor.
 - (I) Description of monitoring equipment and techniques.
 - (J) A map showing the facility layout, property line, and surrounding area up to 2500 feet away, and including any schools, residential areas or other sensitive receptors such as hospitals or locations where children or elderly people live or work.
 - (K) Designation of a person who can conduct a site inspection with the Executive Officer prior to issuance of the plan.
- (6) Applications for Facility Treatment Plans shall at a minimum:
 - (A) Include a list of all AQMD permits to construct or operate which have been issued for that treatment and control equipment.
 - (B) Provide for the implementation of VOC-contaminated soil decontamination measures, as approved by the Executive Officer in writing, which result in Best Available Control Technology during all operations.
 - (C) Provide a map showing the facility layout including the location of all proposed VOC and non-VOC contaminated soil stockpiles.
 - (D) Specify the total amount of VOC contaminated soil proposed to be stockpiled on site.
 - (E) Provide for VOC contaminated soil stockpiles to be kept moist with water or suppressant and be covered to prevent fugitive emissions.

- (F) Provide for VOC contaminated soil stockpiles to be segregated from non-VOC contaminated soil stockpiles.
 - (G) Provide for maintenance of records for stockpiles according to the source name, address and dates of reception.
 - (H) Provide for records of the generator, transporter and storage/treatment facilities and indicate their identification and business addresses. Such records shall be signed by each party at the time custody is transferred.
 - (I) Provide a map showing the facility layout, property line, and surrounding area up to 2500 feet away, and including any schools, residential area or other sensitive receptors such as hospitals, or locations where children or elderly people live or work.
 - (J) Designation of a person who can conduct a site inspection with the Executive Officer prior to issuance of the plan.
 - (K) Specify the operating schedule and maximum amount of VOC-contaminated soil proposed to be remediated on a daily basis.
- (7) In approving a plan, the Executive Officer require reasonable conditions deemed necessary to ensure the operations comply with the plan and AQMD rules. The conditions may include, but shall not be limited to, procedures for ensuring responsibility for the implementation of the plan, accessibility to the site for AQMD staff, notification of actions required by the plan, identification of emission receptors, monitoring and testing, suppression and covering of stockpiles, prevention of public nuisance from VOC or dust emissions, prevention of fugitive emissions of VOC contaminated soil, loading of truck trailers, and disposal and treatment.
- (8) In approving a plan, the Executive Officer may require any records deemed necessary to be maintained by the operator to demonstrate compliance with the plan. Such records shall be retained for at least 2 years and be made available to the Executive officer upon request.

APPENDIX C

VARIOUS LOCATIONS RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

This plan must be renewed annually and is subject to annual renewal fees pursuant to Rule 306 (h).

Plan Issue Date: 5/5/2015

ID 168313

Company: ARDENT ENVIRONMENTAL GROUP, INC.
1827 CAPITAL ST, STE 103
CORONA, CA 92880

Site Location: VARIOUS LOCATIONS IN SCAQMD

Conditions:

The operation under this Rule 1166 has been conditionally approved and is subject to the following conditions:

SECTION I - GENERAL REQUIREMENTS

1. A signed copy of this plan shall be present at each excavation site at all times and shall be made available to SCAQMD personnel upon request.
2. This plan is not valid for the excavation of VOC contaminated soils at landfills or sites used for disposal of refuse or other types of waste.
3. This plan does not allow the treatment of VOC-contaminated soil by thermal, chemical, or mechanical processes. Any of the above treatment processes requires a permit to operate from the SCAQMD and a site-specific Rule 1166 plan.
4. This plan does not allow back-filling of treated VOC contaminated soil. Back-filling of treated VOC contaminated soil may be allowed under a site specific Rule 1166 plan.
5. The total quantity of VOC contaminated soil excavated and handled at each site shall not exceed 2,000 cubic yards. This total includes any VOC contaminated soils excavated from this location under a various location plan within the last twelve (12) calendar months. Excavations involving quantities in excess of 2,000 cubic yards of VOC contaminated soil requires the application submittal and approval of a site specific Rule 1166 excavation plan.
6. For the purposes of Rule 1166 and this plan, soil measured pursuant to Rule 1166 as VOC contaminated soil, is considered as VOC contaminated soil from the time of measurement onward, until the soil is treated pursuant to an approved SCAQMD treatment process.
7. During each step of the process up to and including the removal and disposal process, all precautions and measures shall be taken to minimize the release of VOC, odor and dust. This includes, but is not limited to:
 - A. The use of additional plastic sheeting or suppressants on exposed soil surfaces and work areas,
 - B. Maintaining paved public streets free of soil deposits, and
 - C. Operating such that VOC soil shall not be spread on-site or off-site; and not performing any unnecessary movement or agitation of soil, including the reshaping or relocation of stockpiles, that may cause the uncontrolled evaporation of VOCs into the atmosphere.

ORIGINAL

8. The SCAQMD shall be immediately notified of any complaints received as a result of activities conducted under this plan. Such notification shall include the nature of the complaint, number of complainants and the action taken by the plan holder to mitigate the source of the complaint.

SECTION II - PRIOR TO EXCAVATION

9. At least 24 hours prior to commencing excavation or grading of soil at the site, the executive officer or designee shall be notified of the excavation by fax using a form approved by the executive officer which is fully completed and including, the name of the company performing the excavation, and the application number listed on this mitigation plan. The notification shall be made by faxing the notification form at (909) 396-3342. Fax notifications will receive a reference number by return fax or can be obtained referencing the fax notification by phone Tuesday through Friday during business hours at (909) 396-2326. The reference number shall be retained as proof of compliance with this requirement.

Reference Number:

Notification Date:

10. Complete verification information in Attachment section and obtain required signatures, prior to commencing excavation.

SECTION III - MONITORING

11. All monitoring shall be conducted by trained personnel who are proficient in the use of the hydrocarbon monitor selected for use at this site.
12. During the excavation process, an organic vapor analyzer (OVA) shall be on site at all times. The OVA shall be maintained in good working order at all times and shall be calibrated by the manufacturer at least once every three months. The calibration of the OVA shall be verified using certified calibration gas at the beginning of each working day with the procedures specified by the manufacturer. If a calibration gas other than hexane is used, each measured reading shall be correlated to and expressed as hexane, using equivalency factors provided by the manufacturer.
13. All monitoring shall be conducted at a distance no more than 3 inches above the soil surface using an OVA described in condition no. 12 above. Monitoring shall be conducted at a minimum frequency of one reading for every two cubic yards of soil excavated, not to exceed fifteen minutes between readings. All readings shall be taken no later than three (3) minutes after each load of soil is excavated.
14. Written records of OVA monitoring and calibrations required above shall be kept in a format approved by the SCAQMD. The approved format is included in the attachment section (total 6 pages). The certification on all records shall be signed and dated on the day the measurements are observed.

ORIGINAL

- 15. Upon detection of VOC contaminated soil (readings 50 PPMV or greater), the executive officer or designee shall be notified within 24 hours of the first detection of VOC contamination. The notification shall be made by faxing the notification form to (909) 396-3342 or calling (909) 396-2326. A reference number will be faxed back or will be issued when the phone notification is received. All phone notifications shall be followed by mailing the notification form to the district postmarked within 48 hours. The reference number will be retained as proof of compliance with this requirement.

Reference Number:

Notification Date:

SECTION IV - HANDLING

- 16. If the OVA measurement is greater than 50 PPMV but less than 1000 PPMV
 - A. The affected work area and load of soil shall be sprayed with water and/or approved vapor suppressant.
 - B. Contaminated soil in stockpiles shall be covered with plastic sheeting which overlap a minimum of twenty-four inches and are secured so that no portion of the contaminated soil is exposed to the atmosphere. In the course of handling the stockpile, only the working face of the stockpile may be uncovered.
- 17. If the soil OVA measurement equals or is greater than 1,000 PPMV, notify the District immediately or within one hour of detection, and,
 - A. The affected soil and Working area shall be immediately sprayed with water or an approved vapor suppressant, and either:
 - i. The contaminated soil excavated shall be immediately placed in SCAQMD approved sealed containers equipped with vapor tight lids, or,
 - ii. The soil shall be directly loaded in trucks, sprayed with additional water or approved vapor suppressants, covered, and transported immediately off site to an approved treatment facility, or,
 - B. Handled by alternative storage methods with prior written approval from the SCAQMD.
- 18. All VOC-contaminated soil below 1000 PPMV shall be stockpiled, covered with plastic sheeting and stored separately from non-VOC-contaminated soil, or immediately transported to a treatment facility

SECTION V - STORAGE

- 19. A stockpile shall not contain more than 400 cubic yards of soil.
- 20. During excavation, the only exposed VOC contaminated soil shall be restricted to the immediate working area of the site or stockpile. All other portions of the stockpile shall be covered with plastic sheeting, with seams, which overlap a minimum of twenty-four inches and are secured with duct tape. Any exposed VOC-contaminated soil surfaces (work face) shall be kept moist with water or other approved suppressants at all times, and shall be re-covered during periods of inactivity longer than one (1) hour. At the end of each working day, all stockpiles shall be completely covered and securely anchored to prevent any exposure of soil to the atmosphere.

ORIGINAL

21. Once covered with plastic sheeting, stockpiles shall remain undisturbed until removed from site.
22. Daily inspections shall be conducted of all covered VOC-contaminated stockpiles to ensure the integrity of the plastic cover. Such inspections shall include a visual inspection of all seams and plastic cover surfaces. Any holes, tears or any other potential sources of fugitive VOC emissions shall be repaired immediately. Daily records shall be maintained to ensure compliance with this condition.

SECTION VI - SOIL REMOVAL AND DISPOSAL

23. All excavated VOC-contaminated soil shall be removed from the site within thirty (30) days of its excavation.
24. All VOC-contaminated soil removed from the site shall comply with the following:
 - A. Be transported to an approved treatment/disposal facility. It shall be the responsibility of the plan holder to ensure that the receiving treatment/disposal facility has received approval from the appropriate environmental oversight agencies to handle and treat VOC contaminated soils.
 - B. Prior to covering/tarping, loaded contaminated soil shall be treated by spraying with water or dust suppressants.
 - C. The truck or trailer shall be completely covered/tarped prior to leaving the site to prevent particulate emissions to the atmosphere.
 - D. When loading is completed and during transportation, no excavated material shall extend above the sides or rear of the truck or trailer.
 - E. The exterior of the trucks (including the tires) shall be cleaned off prior to the trucks leaving the excavation site.

SECTION VII - RECORDS AND REPORTING

25. A written report shall be provided to the SCAQMD within 30 days of initial detection of contaminated soil, which includes the following information:
 - A. The status of the excavation pit, and any VOC contaminated soil remaining on site.
 - B. A brief summary indicating if additional clean up efforts are necessary, the additional quantity of VOC contaminated soils to be excavated and the projected schedule of the excavation.
26. Records of disposal shall be maintained for all VOC-contaminated soil removed from this site. Such records shall be clearly labeled SCAQMD RULE 1166-VOC CONTAMINATED SOIL and shall include the identification and the location of, 1) the generator, 2) transporter and 3) receiving facility. In addition, such records shall be signed and dated by each of the above parties indicating receipt or relinquishment of the VOC-contaminated soil at the time custody is transferred.
27. Records of disposal of VOC-contaminated soil shall be maintained on site during the excavation and later maintained for a period of two (2) years. The records shall be made available to SCAQMD personnel upon request.

ORIGINAL

28. Within thirty (30) days after the excavation at the site is completed, the written records under conditions no. 14, 22, and 27 shall be submitted to the SCAQMD at the following address:

South Coast Air Quality Mgmt District
Engineering & Compliance division
Toxics & Waste management unit
(Rule 1166 Compliance)
21865 E. Copley Dr.
Diamond Bar, CA. 91765-4182

29. Once issued, this plan is subject to further review by the SCAQMD and may be revoked if excavation activities are found in violation of plan conditions or SCAQMD's Rules and Regulations. Failure to comply with one or more of the conditions contained within this plan constitutes a violation of Rules 221 and 1166.

NOTICE

This plan does not authorize the emission of air contaminants in excess of those allowed by Division 26 of the Health and Safety Code of the State of California or the applicable Rules and Regulations of the South Coast Air Quality Management District (SCAQMD). This plan cannot be considered as permission to violate existing laws, ordinances, regulations or statutes of other government agencies.

A copy of this plan shall be displayed in the vicinity of the equipment subject to this plan.

Executive Officer

A handwritten signature in dark ink that reads "Dorris M. Bailey". The signature is written in a cursive, flowing style.

DEFINITIONS

- | | |
|---------------------------------|---|
| Excavation | Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil. |
| Organic Vapor Analyzer (OVA) | For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV |
| Responsible Party | For the purposes of this plan, Responsible Party is the party financially responsible for initiating the excavation. This may include the property owner or the tank operator. This excludes contractors working for the property owner or operator, and any other party that lacks the direct authority to immediately treat all VOC contaminated soils generated at the excavation site. |
| VOC Contaminated Soil | Is soil that registers a concentration of 50 PPM or greater of volatile organic compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane. |
| Volatile Organic Compound (VOC) | Is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, |

ammonium carbonate, and exempt compounds. Exempt compounds areas defined in Rule 102 – Definitions of Terms.

Once issued, this plan is subject to further review by the SCAQMD and may be revoked if excavation activities are found in violation of plan conditions or SCAQMD's Rules and Regulations. Failure to comply with one or more of the conditions contained within this plan constitutes a violation of Rules 221 and 1166.

Other governmental agencies may require approval before any excavation begins. It shall be the responsibility of the applicant to obtain that approval. The South Coast Air Quality Management District shall not be responsible or liable for any losses because of measures required or taken pursuant to the requirements of this approved Rule 1166 Contaminated Soil Mitigation Plan.

Questions regarding this plan should be directed to David Jones at (909) 396-2317.

July 1, 2014

IMPORTANT NOTICE Rules 203, 1149 and 1166 Fees

TO COMPANIES AND CONTRACTORS THAT:

- Operate portable soil/vapor extraction units at a location for 5 days or more (Rule 203)*
- Degas storage tanks known/suspected to contain Volatile Organic Compounds (VOC) (Rule 1149)*
- Remove tanks or transfer piping known/suspected to contain VOC (Rule 1166)*
- Handle, excavate, grade, monitor or treat soil known/suspected to contain VOC (Rule 1166)*

SCAQMD Regulation III - Fee amendments for the Fiscal Year 2014-2015 increased notification fee is as shown below. All required notifications for soil vapor extraction projects, tank degassing projects, and excavation of VOC soil projects, are subject to the new fee per Rule 301(x) effective July 1st, 2014. See fee schedule below:

Fiscal Year	Notification Fee*
2014-2015	\$57.18

The fee is per notification and an additional service charge fee of \$25.00 may apply for any returned check per Rule 313(i).

Initial notifications must be faxed to 909-396-3342 and the original notification and fee must be postmarked within 48 hours of the fax time.

SCAQMD recommends mailing your notification to save time, money, reduce traffic, conserve energy use and avoid air pollution. ***For your convenience please mail all notifications and fees to the following mailing address:***

*SCAQMD R203/1149/1166 Notifications,
FILE # 55641,
Los Angeles, CA 90074-5641*

Notifications should be completed, signed, mailed and the fee paid by the contractor performing the project. Notifications submitted without a fee are deemed incomplete and they will be returned to sender and referred to the Air Toxics Compliance Unit.

Rules 203, 1149 and 1166 notification forms, instructions, and information can be obtained from the SCAQMD web site at <http://www.aqmd.gov>

The forms are located at our home page, click on **Business / Compliance Program / Recordkeeping and Reporting Forms** or the **Rule** link below.

- 203 Soil Vapor Extraction (SVE) [Notification Form](#)
- 1166 VOC Emissions From Soil Excavation [Notification Form](#)
- 1149 Storage Tank Degassing [Notification Form](#)

For any Rule 203/1149/1166 questions call the above Rules Hot Line at (909) 396-2326.

*NOTE: Rule 304(e) requires an owner operator to pay for analysis of SCAQMD field samples showing non compliance. Please consult the current Rule 301 for the correct Notification Fee prior to sending the payment.

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT SVE Operation (R203) or Rule 1166 NOTIFICATION FORM

Use this form to notify of operation of a Soil Vapor Extraction unit (SVE); or prior to Excavating, Handling, Monitoring, Treating known or suspect Volatile Organic Compounds (VOC) contaminated soil per R1166. See instructions on the back of this form. For questions check our website at www.aqmd.gov or call the Hotline at (909) 396-2326.

FAX this form to 909-396-3342 and within 48 hours of the fax, MAIL the original form and fee to:

Rule 203 and Rule 1166 Form Notification Instructions

Use this form to notify of operation of a Soil Vapor Extraction unit (SVE) at any site for more than 5 days per permit condition (R203); or for notifying about R1166 projects prior to excavating soil that is known or suspected to contain Volatile Organic Compounds (VOC), VOC tank excavation, discovering the presence of > 50 ppm and 1000 ppm VOC contaminated soil during soil excavation, or to notify of onsite VOC contaminated soil mitigation or treating. For questions check our website at www.aqmd.gov or call the Hotline at (909) 396-2326

NOTIFICATION FEES: Per Rule 301(x) any person required to submit a notification per Rule 1166 projects or Rule 203 - Soil Vapor Extraction projects must pay a notification fee per notification.

FAX all notifications to (909) 396-3342 and then **MAIL** the form and fee within 48 hours of fax to:

SCAQMD Rule 1166 / 203 Notifications, File # 55641, Los Angeles, CA 90074-5641

Notifications must include the following **MANDATORY** information:

Faxback # - Provide your fax # at the top of the Notification Form if you want a **Reference #** faxed back to you.

Notification Type - **CIRCLE** the type of Notification. **Original** is for new or initial Notifications. **Revisions** are for updating information on notifications in which the project End Date has not expired. Provide the most recent prior Reference # issued for **Revisions** or **Cancellations**.

Project Type - **CIRCLE** the type of work you are submitting a notification for. A separate notification and fee is required for each type of work selected.

Mitigation Plan/Permit - Each Project Type requires a valid R1166 Mitigation Plan or SVE Permit # (*important*).

Site Contractor Information - Provide the information for the actual contractor **doing the work**. The AQMD ID #, also known as Company or Facility ID #, can be found on the contractor's AQMD Mitigation Plan, Permits or invoices.

Site Information - Provide the site name and complete address. Include the street number and name, city, zip code, and nearest cross street. Give more detailed directions for site(s) difficult to locate.

Project Dates - Provide the project Start and End Dates. Any changes will require a Revision notification.

Tank Information - For R1166 tank excavation specify the tank capacity, the VOC material stored in the tank, and if the tank is above ground (a/g) or underground (u/g).

Information Certification - The notification must be signed and dated by the contractor doing the work or authorized representative to confirm that the information provided is complete and accurate.

SOIL/TANK EXCAVATION NOTIFICATION Rule 1166(c)(1)(B) **Notify 24 hours prior of intent to Excavate** known or suspected VOC storage and/or transfer equipment (includes diesel and waste oil tanks); or **handling** known or suspected VOC contaminated soil. **NOTE:** Soil excavation > 5,000 cubic yards may require a R403 Fugitive Dust Plan.

DETECTING/FINDING VOC SOIL NOTIFICATION - Rule 1166(c)(1)(D)(ii) **Notify of finding VOC contaminated soil**

- within 1 hour of detecting VOC greater than 1000 ppm*
- within 24 hours of detecting VOC greater than 50 ppm
- within 1 hour of an excavation due to a breakdown requiring a Rule 430 notification to SCAQMD

EMERGENCY NOTIFICATION Rule 1166(c)(1)(B) **Notify prior to start work of any incident declared an emergency** by an authorized agency requiring immediate tank removal/repairs or excavating/handling known or suspected VOC soil:

- Call 1-800-CUT-SMOG prior to excavating or fax the emergency notification to 909-396-3342 and
- Mail the notification within 48 hours after the excavation including the agency Order or Declaration.

SOIL VAPOR EXTRACTION NOTIFICATION (SVE - Rule 203 *) **Notify upon the 5th day after operating at a new site:** Notifying of **start-up** or **testing** of operation of portable Soil Vapor Extraction equipment lasting 5 days or more. Provide the distance in feet to the nearest sensitive receptor **if** the site is located less than ¼ mile from any Long-Term Health Care Facility, Rehabilitation Center, Convalescent Center, Retirement Home, Residence, School, Playground, Child Care Center or Athletic Facility (* See your SVE permit condition requirements).

MITIGATION/TREATING VOC SOIL NOTIFICATION (Rule 203 *) **Notify per Permit condition requirements when:** Notifying of on-site **mitigation** or **treating** of VOC contaminated soil (* See your Permit condition requirements).

APPENDIX D

IMPORT SOIL SAMPLING REQUIREMENTS

Information Advisory

Clean Imported Fill Material

October 2001

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

It is DTSC's mission to restore, protect and enhance the environment, to ensure public health, environmental quality and economic vitality, by regulating hazardous waste, conducting and overseeing cleanups, and developing and promoting pollution prevention.

State of California

California
Environmental
Protection Agency

Executive Summary

This fact sheet has been prepared to ensure that inappropriate fill material is not introduced onto sensitive land use properties under the oversight of the DTSC or applicable regulatory authorities. Sensitive land use properties include those that contain facilities such as hospitals, homes, day care centers, and schools. This document only focuses on human health concerns and ecological issues are not addressed.

It identifies those types of land use activities that may be appropriate when determining whether a site may be used as a fill material source area. It also provides guidelines for the appropriate types of analyses that should be performed relative to the former land use, and for the number of samples that should be collected and analyzed based on the estimated volume of fill material that will need to be used. The information provided in this fact sheet is not regulatory in nature, rather is to be used as a guide, and in most situations the final decision as to the acceptability of fill material for a sensitive land use property is made on a case-by-case basis by the appropriate regulatory agency.

Introduction

The use of imported fill material has recently come under scrutiny because of the instances where contaminated soil has been brought onto an otherwise clean site. However, there are currently no established standards in the statutes or regulations that address environmental requirements for imported fill material. Therefore, the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC) has prepared this fact sheet to identify procedures that can be used to minimize the possibility of introducing contaminated soil onto a site that requires imported fill material. Such sites include those that are undergoing site remediation, corrective action, and closure activities overseen by DTSC or the appropriate regulatory agency. These procedures may also apply to construction projects that will result in sensitive land uses. The intent of this fact sheet is to protect people who live on or otherwise use a sensitive land use property. By using this fact sheet as a guide, the reader will minimize the chance of introducing fill material that may result in potential risk to human health or the environment at some future time.

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our website at www.dtsc.ca.gov.

Overview

Both natural and manmade fill materials are used for a variety of purposes. Fill material properties are commonly controlled to meet the necessary site specific engineering specifications. Because most sites requiring fill material are located in or near urban areas, the fill materials are often obtained from construction projects that generate an excess of soil, and from demolition debris (asphalt, broken concrete, etc.). However, materials from those types of sites may or may not be appropriate, depending on the proposed use of the fill, and the quality of the assessment and/or mitigation measures, if necessary. Therefore, unless material from construction projects can be demonstrated to be free of contami-

nation and/or appropriate for the proposed use, the use of that material as fill should be avoided.

Selecting Fill Material

In general, the fill source area should be located in nonindustrial areas, and not from sites undergoing an environmental cleanup. Nonindustrial sites include those that were previously undeveloped, or used solely for residential or agricultural purposes. If the source is from an agricultural area, care should be taken to insure that the fill does not include former agricultural waste process byproducts such as manure or other decomposed organic material. Undesirable sources of fill material include industrial and/or commercial sites where hazardous ma-

Potential Contaminants Based on the Fill Source Area

Fill Source:	Target Compounds
Land near to an existing freeway	Lead (EPA methods 6010B or 7471A), PAHs (EPA method 8310)
Land near a mining area or rock quarry	Heavy Metals (EPA methods 6010B and 7471A), asbestos (polarized light microscopy), pH
Agricultural land	Pesticides (Organochlorine Pesticides: EPA method 8081A or 8080A; Organophosphorus Pesticides: EPA method 8141A; Chlorinated Herbicides: EPA method 8151A), heavy metals (EPA methods 6010B and 7471A)
Residential/acceptable commercial land	VOCs (EPA method 8021 or 8260B, as appropriate and combined with collection by EPA Method 5035), semi-VOCs (EPA method 8270C), TPH (modified EPA method 8015), PCBs (EPA method 8082 or 8080A), heavy metals including lead (EPA methods 6010B and 7471A), asbestos (OSHA Method ID-191)

**The recommended analyses should be performed in accordance with USEPA SW-846 methods (1996). Other possible analyses include Hexavalent Chromium: EPA method 7199*

Recommended Fill Material Sampling Schedule

Area of Individual Borrow Area	Sampling Requirements
2 acres or less	Minimum of 4 samples
2 to 4 acres	Minimum of 1 sample every 1/2 acre
4 to 10 acres	Minimum of 8 samples
Greater than 10 acres	Minimum of 8 locations with 4 subsamples per location
Volume of Borrow Area Stockpile	Samples per Volume
Up to 1,000 cubic yards	1 sample per 250 cubic yards
1,000 to 5,000 cubic yards	4 samples for first 1000 cubic yards + 1 sample per each additional 500 cubic yards
Greater than 5,000 cubic yards	12 samples for first 5,000 cubic yards + 1 sample per each additional 1,000 cubic yards

terials were used, handled or stored as part of the business operations, or unpaved parking areas where petroleum hydrocarbons could have been spilled or leaked into the soil. Undesirable commercial sites include former gasoline service stations, retail strip malls that contained dry cleaners or photographic processing facilities, paint stores, auto repair and/or painting facilities. Undesirable industrial facilities include metal processing shops, manufacturing facilities, aerospace facilities, oil refineries, waste treatment plants, etc. Alternatives to using fill from construction sites include the use of fill material obtained from a commercial supplier of fill material or from soil pits in rural or suburban areas. However, care should be taken to ensure that those materials are also uncontaminated.

Documentation and Analysis

In order to minimize the potential of introducing contaminated fill material onto a site, it is necessary

to verify through documentation that the fill source is appropriate and/or to have the fill material analyzed for potential contaminants based on the location and history of the source area. Fill documentation should include detailed information on the previous use of the land from where the fill is taken, whether an environmental site assessment was performed and its findings, and the results of any testing performed. It is recommended that any such documentation should be signed by an appropriately licensed (CA-registered) individual. If such documentation is not available or is inadequate, samples of the fill material should be chemically analyzed. Analysis of the fill material should be based on the source of the fill and knowledge of the prior land use.

Detectable amounts of compounds of concern within the fill material should be evaluated for risk in accordance with the DTSC Preliminary Endangerment Assessment (PEA) Guidance Manual. If

metal analyses are performed, only those metals (CAM 17 / Title 22) to which risk levels have been assigned need to be evaluated. At present, the DTSC is working to establish California Screening Levels (CSL) to determine whether some compounds of concern pose a risk. Until such time as these CSL values are established, DTSC recommends that the DTSC PEA Guidance Manual or an equivalent process be referenced. This guidance may include the Regional Water Quality Control Board's (RWQCB) guidelines for reuse of non-hazardous petroleum hydrocarbon contaminated soil as applied to Total Petroleum Hydrocarbons (TPH) only. The RWQCB guidelines should not be used for volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCS). In addition, a standard laboratory data package, including a summary of the QA/QC (Quality Assurance/Quality Control) sample results should also accompany all analytical reports.

When possible, representative samples should be collected at the borrow area while the potential fill material is still in place, and analyzed prior to removal from the borrow area. In addition to performing the appropriate analyses of the fill material, an appropriate number of samples should also be determined based on the approximate volume or area of soil to be used as fill material. The table above can be used as a guide to determine the number of samples needed to adequately characterize the fill material when sampled at the borrow site.

Alternative Sampling

A Phase I or PEA may be conducted prior to sampling to determine whether the borrow area may have been impacted by previous activities on the property. After the property has been evaluated, any sampling that may be required can be determined during a meeting with DTSC or appropriate regulatory agency. However, if it is not possible to analyze the fill material at the borrow area or determine that it is appropriate for use via a Phase I or PEA, it is recommended that one (1) sample per truckload be collected and analyzed for all com-

pounds of concern to ensure that the imported soil is uncontaminated and acceptable. (See chart on Potential Contaminants Based on the Fill Source Area for appropriate analyses). This sampling frequency may be modified upon consultation with the DTSC or appropriate regulatory agency if all of the fill material is derived from a common borrow area. However, fill material that is not characterized at the borrow area will need to be stockpiled either on or off-site until the analyses have been completed. In addition, should contaminants exceeding acceptance criteria be identified in the stockpiled fill material, that material will be deemed unacceptable and new fill material will need to be obtained, sampled and analyzed. Therefore, the DTSC recommends that all sampling and analyses should be completed prior to delivery to the site to ensure the soil is free of contamination, and to eliminate unnecessary transportation charges for unacceptable fill material.

Composite sampling for fill material characterization may or may not be appropriate, depending on quality and homogeneity of source/borrow area, and compounds of concern. Compositing samples for volatile and semivolatile constituents is not acceptable. Composite sampling for heavy metals, pesticides, herbicides or PAH's from unanalyzed stockpiled soil is also unacceptable, unless it is stockpiled at the borrow area and originates from the same source area. In addition, if samples are composited, they should be from the same soil layer, and not from different soil layers.

When very large volumes of fill material are anticipated, or when larger areas are being considered as borrow areas, the DTSC recommends that a Phase I or PEA be conducted on the area to ensure that the borrow area has not been impacted by previous activities on the property. After the property has been evaluated, any sampling that may be required can be determined during a meeting with the DTSC.

For further information, call Richard Coffman, Ph.D., R.G., at (818) 551-2175.

APPENDIX E
FIELD PROCEDURES

APPENDIX E

FIELD PROCEDURES

Drilling and Soil Sampling Procedures

1. The borings will be drilled using a truck-mounted drill rig equipped with nominal 6-inch hollow-stem augers or using direct-push equipment. Drilling services will be provided by a State-licensed drilling contractor.
2. The augers and sampling equipment will be steam-cleaned prior to the drilling.
3. Soil cuttings from the drilling operations will be stored on-site in Department of Transportation (DOT)-approved 55-gallon drums, pending disposal disposition. The drums will be labeled with the boring designation from which the soil was collected, date, and project number.
4. Soil descriptions, in general accordance with the Unified Soil Classification System, sample type and depth, and related drilling information, will be recorded on a boring log under the supervision of a California Professional Geologist from Ardent Environmental Group, Inc.
5. Soil samples will be collected using a split-barrel modified California sampler at approximately 5 feet below the ground surface (bgs) and at approximate 5-foot-depth intervals thereafter, and continue to the bottom of the boring or at significant changes in lithology. Some samples might be collected at shallower depths.
6. The sampler will be washed between sampling intervals, using a bristle brush, with an Alconox solution (an inorganic detergent); followed by two tap water rinses. The sampler will be dried by air or with a paper towel prior to being used for sampling.
7. Soil samples will be collected (at each sample interval) in three 6-inch-long stainless steel or brass sampling rings inside the sampler. Prior to initiation of the field program, the sample rings will be cleaned and dried in a similar fashion as described above in item 6.
8. The sampler will be driven using a 140-pound hammer (approximate weight) dropping approximately 30 inches. The number of blows (blow count) required to advance the sampler 18 inches will be recorded on the boring log.
9. Following retrieval of the sampler, the first 6-inch-long ring from the shoe of the sampler will be removed from the sampler; the ends will be covered with Teflon and capped with PVC end caps. The sample will be labeled with the sample number, collection date, and project number and will be retained for potential laboratory analysis.

10. The soil in the second sample tube from the shoe of the sampler will be used to describe the soil, measure volatile organic compounds (VOCs) using a Photoionization Detector (PID) equipped with an 11.7 electronvolt (eV) bulb, and collect a sample using EPA Method 5035. Following retrieval of the sample ring, a plastic syringe will be used to collect three samples of approximately 5 grams of soil. The first two soil samples will be ejected into a pre-weighed, laboratory supplied, 40-milliliter, VOA vial containing sodium bisulfate. One additional sample weighing approximately 5 grams of soil will be collected using the syringe and ejected into a VOA vial containing methanol. A new syringe will be used for each sampling interval. Approximately half of the remaining soil in the ring will be removed and placed in a Ziploc bag. The bag will then be agitated and set aside for approximately 15 to 30 minutes to allow organic vapors, if present, to accumulate in the void space (headspace) of the sample tube. The headspace will then be "sniffed" using the PID. The measurements will be considered in the selection of soil samples for laboratory analyses. The PID will be calibrated daily as per the manufactures specifications.
11. The borings will be backfilled with bentonite grout or hydrated granular bentonite to ground surface.

Soil Sampling from Excavations, Test Pits, or Stockpiles

1. Soil samples will be collected from the excavation, test pits, and stockpiles using a backhoe bucket or clean spade. The samples will be placed into 4-ounce glass jars supplied by the laboratory or stainless steel rings with PVC end caps. Soil sampling will be conducted under the supervision of a California Professional Geologist from Ardent.
2. Samples to be chemically analyzed for total petroleum hydrocarbons as gasoline (TPHg) or VOCs will be collected in accordance with EPA Method No. 5035, as described above.

Sample Handling

1. The soil samples retained for chemical analyses will be placed in Ziploc bags and stored in an ice chest cooled, using ice, to a temperature of approximately 40 degrees Fahrenheit.
2. The samples will be delivered to a State-certified environmental laboratory within 24 hours of collection. Sample handling, transport, and delivery to the laboratory will be documented using chain-of-custody procedures, including the use of chain-of-custody forms.

Quality Assurance/Quality Control (QA/QC)

1. QA will be implemented to assess whether the data obtained are comparable and representative of actual field conditions. The QC checks will be controlled samples that will be introduced into the sample analysis stream, and will be used to assess the performance of the laboratory, and to evaluate the accuracy, precision, and completeness of the laboratory analytical procedures.
2. The QA/QC program will consist of the minimization of possible cross-contamination during sample collection, and included decontamination of sampling equipment and the internal QA/QC procedures that will be conducted by the laboratory: laboratory blanks, laboratory surrogate spikes, and laboratory matrix spike samples.

Subject: Phase I Environmental Site Assessment
Parking Lot
3120 and 3130 Kenwood Street
Burbank, California

Dear Mr. Tecimer:

Ardent Environmental Group, Inc. (Ardent) has performed a Phase I Environmental Site Assessment (ESA) of a parking lot property located at 3120 and 3130 Kenwood Street in the city of Burbank, California (site). Work was completed in accordance with Ardent's proposal dated February 10, 2016. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the site. We appreciate the opportunity to be of service to you on this project.

Sincerely,
Ardent Environmental Group, Inc.

EXECUTIVE SUMMARY

Ardent Environmental Group, Inc. (Ardent) was retained by Overton Moore Properties (OMP) to perform a Phase I Environmental Site Assessment (ESA) for a parking lot located at 3120 and 3130 Kenwood Street in the city of Burbank, California (“site” or “subject property”). The site is located immediately north of a large property formerly occupied by Lockheed Martin Corporation (Lockheed) Plant B6 (referred to herein as the “larger property,” or “Lockheed Plant B6”) that was used as an aircraft research, manufacturing, assembly, and maintenance facility. OMP is in the process of purchasing portions of the Lockheed Plant B6 property immediately south of the site and is considering incorporating the subject site into its redeveloped plans. The redevelopment plans will include commercial use, such as warehouse, offices, retail, and a hotel.

As part of its real estate due diligence, OMP retained Ardent to complete a Phase I ESA and subsurface investigation for the portion of the Lockheed Plant B6 property located south of the site. During the previous Phase I ESA, and completion of this Phase I ESA, Ardent reviewed numerous environmental files for the former Lockheed Plant B6 property and other industrial facilities in the site vicinity. Site assessment activities for this report were conducted between February 11, 2016 and February 19, 2016.

In summary, the following items were noted:

- The site was used for agricultural purposes or vacant land in 1928. In 1938 and 1952, the southern portion of the site (3120 Kenwood Street) and the northern portion of the property (3130 Kenwood Street) appeared to contain sparse residences and a possible office. From at least 1954 through 1964, the southern portion of the site was used as a parking lot and the northern parcel appeared to contain residences and possibly small commercial and/or retail buildings along Kenwood Street. Based on building permit records, it appears that both parcels were acquired in 1976 by a manufacturing business west of Kenwood Street (located at 3111 Kenwood Street) and the northern parcel was redeveloped as a parking lot, similar to the southern property use. The subject property has been used as a parking lot since that time. No reported manufacturing operations have been conducted on the site.
- The site is located within the San Fernando Valley Groundwater Basin which has been designated by EPA as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses. The areas of groundwater contamination, designated as “Operable Units,” contain chemicals such as volatile organic compounds (VOCs), namely trichloroethene (TCE) and tetrachloroethylene (PCE), and other chemicals such as hexavalent chromium and 1,4-dioxane. The site lies within the “Burbank Operable Unit.” A number of investigations have been completed over the years, and based on the results, Lockheed and others have been named as potentially responsible party (PRPs) for

contributing to the groundwater issues. Groundwater investigations completed in the site vicinity have shown elevated concentrations of PCE, TCE, and hexavalent chromium. Groundwater has been measured immediately south of the site at depths of approximately 220 feet below the ground surface (bgs) and flows in a southeasterly direction. There are no groundwater wells located on-site and the site has not been investigated by regulatory agencies as a possible contributor to the groundwater issues.

- There have been a number of investigations completed at properties located within the site vicinity as part of the Regional Water Quality Control Board, Los Angeles Region (RWQCB) Well Investigation Program (WIP) associated with the San Fernando Valley Groundwater Basin Superfund Site. Two such properties include the large Lockheed Plant B6 property located immediately south of the site and the Aviall, Inc. (Aviall) property located immediately west of the site. Although these facilities have obtained no further action (NFA) letters from the RWQCB for soil, laboratory results have shown residual VOC soil gas concentrations at each property. Ardent recently completed a soil gas survey at the Lockheed property as part of OMPs real estate due diligence and to obtain current site conditions. Based on the results, no detectable to low concentrations of VOCs were noted that would pose a possible human health risk to future occupants through vapor intrusion.
- No other- on or off-site environmental issues were noted for the site.

Ardent has performed this Phase I ESA in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E 1527-13, ASTM Practice E 2600-15, and the EPA Standards and Practices for All Appropriate Inquires (AAI), Final Rule (40 CFR, Part 312), for a property, currently being used as a parking lot, located at 2801 North Hollywood Way located in the city of Burbank, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. No evidence or indication of recognized environmental conditions (RECs), or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property has been revealed, with the exception of the regional groundwater issue and possibly uncertainty of the small commercial uses at the site.

Although there is a low likelihood that elevated concentrations of residual VOCs are present in soil gas at concentrations exceeding human health risk criteria due to off-site sources, Ardent recommends completing a soil gas survey throughout the site to verify these assumptions. The soil gas survey would also provide a screening technique to assess whether “hot-spots” are present due to possible on-site commercial use (i.e. possible contributions to groundwater issues). Concentrations of VOCs, if present, should be evaluated based on possible human health risks and threat to groundwater criteria.

1 INTRODUCTION

Ardent Environmental Group, Inc. (Ardent) was retained by Overton Moore Properties (OMP) to perform a Phase I Environmental Site Assessment (ESA) for a parking lot located at 3120 and 3130 Kenwood Street in the city of Burbank, California (“site” or “subject property,” Figure 1). Work was completed in general accordance with the proposal dated February 10, 2016 between OMP and Ardent.

The site is located immediately north of a large property formerly occupied by Lockheed Martin Corporation (Lockheed) Plant B6 (referred to herein as the “larger property,” or “Lockheed Plant B6”) that was used as an aircraft research, manufacturing, assembly, and maintenance facility. OMP is in the process of purchasing portions of the Lockheed Plant B6 property immediately south of the site and is considering incorporating the subject site into its redevelopment plans. The redevelopment plans will include commercial use, such as warehouse, offices, retail, and a hotel.

As part of its real estate due diligence, OMP retained Ardent to complete a Phase I ESA and subsurface investigation for the portion of the Lockheed Plant B6 property located south of the site. During the previous Phase I ESA, and completion of this Phase I ESA, Ardent reviewed numerous environmental files for the former Lockheed Plant B6 property and other industrial facilities in the site vicinity. The following sections identify the purpose, the involved parties, the scope of work, and the limitations and exceptions associated with the Phase I ESA.

1.1 Purpose of Phase I ESA

In accordance with the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard E 1527-13), the objective of the Phase I ESA was to identify, to the extent feasible pursuant to ASTM Standard E 1527-13, recognized environmental conditions (RECs), which are defined by ASTM as “...the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

The United States Environmental Protection Agency (“USEPA” or “EPA”) has stated that ASTM Standard E 1527-13, is consistent with the Standards and Practices for All Appropriate Inquires (AAI), Final Rule (40 Code of Federal Regulations [CFR], Part 312) and is compliant with the statutory criteria for all appropriate inquires. All appropriate inquires, as defined in the AAI Final Rule, must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal Brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, was to identify releases and threatened releases of hazardous substances which cause or threaten to cause the incurrence of response costs.

As part of this Phase I ESA, Ardent also assessed whether a vapor encroachment condition (VEC) exists at the site. The VEC assessment was completed following the ASTM E 2600-15 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM Standard E 2600-15). The objective of this work was to evaluate whether possible contaminants (e.g. volatile organic compounds [VOCs]) are present in soil and/or groundwater in the site vicinity which might pose a possible vapor intrusion into existing or future buildings at the site.

1.2 Involved Parties

Ms. Kasia Edlund and Mr. Paul Roberts of Ardent conducted the historical research, site reconnaissance, regulatory inquiries, and document review. Mr. Paul Roberts completed oversight and management. Mr. Roberts meets the definition of an environmental professional as set forth in the AAI Final Rule.

1.3 Scope of Work

Ardent's scope of work for this Phase I ESA is consistent with ASTM Standard E1527-13 and included the activities listed below.

- **Review of User Provided Information** – Review of information regarding title and judicial records for environmental liens or activity and use limitations, recorded environmental liens, actual or specialized knowledge or commonly known information regarding environmental conditions at the site, the relationship of the purchase price of the property to the fair market value, readily available maps, environmental reports, and

other environmental documents pertaining to the site, as available and obtained from the user/client.

- **Records Review** – Acquisition and review of records, including federal, state, tribal, and local regulatory agency databases, for the site and for properties located within a specified radius of the site; local regulatory agency files for the site and selected nearby properties of potential environmental concern; physical setting sources, including topographic maps, geologic maps, and geologic and hydrogeologic reference documents; and historic land use information including aerial photographs, historical fire insurance rate maps, building department records, and city directories, as necessary, that are reasonably ascertainable, publicly available, can be obtained within reasonable time and cost, and are practically reviewable.
- **Vapor Encroachment Condition (VEC)** – Review available regulatory and client provided data to assess Tier 1 non-numeric screening for the site. Ardent evaluated whether contaminants were present in soil and/or groundwater in the site vicinity which might pose a VEC at the site.
- **Site Reconnaissance** – Performance of a site reconnaissance to visually observe the site and any structure(s) located on the site to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. The purpose of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the site, including the general site setting, site usage, use and storage of hazardous materials and petroleum products, disposal of waste products and materials, sources of polychlorinated biphenyls (PCBs), and evidence of releases and possible risks of contamination from activities at adjacent properties.
- **Interviews** – Interviews with site representatives, including owners, occupants, and site managers, regarding the environmental condition of the site to the extent necessary and such persons are available. Interviews with state and/or local government officials as necessary.
- **Report** – Evaluation of the information and data obtained by the Phase I ESA process outlined above and preparation of this Phase I ESA report documenting findings and providing opinions and conclusions regarding possible environmental impacts and RECs at the site.

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ardent should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject property or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ardent has no control. Ardent cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5 Special Terms and Conditions

As indicated in Section 13.1.5 of ASTM Standard E 1527-13, the following, which is not intended to be all inclusive, represents out-of-scope items with respect to a Phase I ESA: asbestos-containing building materials (ACMs), radon, lead-based paint (LBP), lead in drinking water, wetlands, regulatory compliance, cultural and historic risk, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, biological agents, and mold. As part of our agreement with the client, Ardent visually assessed site buildings (if present) for possible ACMs, LBP, and mold. In addition, ASTM Standard E 2600-15 supplements the ASTM Standard E 1527-13 to include evaluation of VEC using Tier 1 screening.

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, Ardent did not address interpretations of zoning regulations, building code requirements, or property title issues.

1.6 User Reliance

This report may be relied upon and is intended exclusively for use by the client, its partners, members, investors, affiliates, successors and assigns, and lenders. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than the foregoing parties is undertaken at said parties' sole risk.

1.7 Physical Limitations

No physical limitations were encountered during the completion of this Phase I ESA report.

1.8 Data Gaps

No significant data gaps were noted during the preparation of this Phase I ESA report.

2 GENERAL SITE CHARACTERISTICS

The following sections describe the location and the current uses of the site and adjacent properties. A site location map is presented as Figure 1 and a site vicinity map is presented as Figure 2. Selected photographs of the site and surrounding properties are provided in Appendix A.

2.1 Location and Legal Description

The site is located approximately 200 feet south of Cohasset Street and immediately east of Kenwood Street in the city of Burbank, Los Angeles County, California (Figure 1). The site comprises two parcels, each consisting of approximately 0.77-acre (total 1.53-acres).

According to the Los Angeles County Tax Assessor and City of Burbank Building Department (BBD), the northern parcel has been assigned the Tax Assessor Parcel Number (APN) 2466-028-906 and address of 3130 Kenwood Street. The southern parcel has been assigned the APN 2466-011-907 and the address 3120 Kenwood Street. The northern parcel is referred to by the County Tax Assessor as "commercial/industrial" land type, while the southern parcel is referred to as "other." According to the County Tax Assessor, the southern parcel has also been assigned the address 2801 North Hollywood Way. Other properties associated with the former Lockheed Plant B6 property have also

been assigned this address, making agency file reviews difficult for this address. The legal description can be found in the Preliminary Title Report in Appendix C.

The site is bounded to the south by vacant land (former Lockheed Plant B6 property), west by Kenwood Street, north by a commercial building currently occupied by MP Montanous, and to the east by a vacant parking lot (Figure 2). Site boundary information was obtained during the site reconnaissance and from information provided by the client.

2.2 Site Description and Current Site Uses/Operations

The following paragraphs present a description of the structures present at the site, the tenants currently occupying the site, the activities being conducted on-site, the heating and cooling systems utilized in the site building, the sewage disposal system, and the potable water provider for the site, if any.

2.2.1 Site Description

The subject site is rectangular-shaped property that comprises approximately 1.53-acres. At the time of the site reconnaissance, the site was a vacant parking lot (Figure 2).

2.2.2 Occupants

The site is vacant with no structures.

2.2.3 Heating and Cooling Systems

Future heating and cooling will likely be powered by electricity and/or natural gas provided by local municipalities.

2.2.4 Sewage Disposal/Septic Systems

Future sewage disposal will likely be provided by the city municipalities. There has been no indication that septic systems have been used at the site.

2.2.5 Potable Water

Potable water is provided to the site by the local water purveyor.

2.3 Adjacent Properties

In general, the site vicinity is used for commercial, office, and retail purposes. The site was formerly part of a larger property located west of the site that is currently occupied by Hertz Entertainment Services (Hertz) and formerly occupied by Aviall, Inc. (Aviall) at 3111 and 3121 Kenwood Street (Figure 2). During this time, the subject site was always used as a parking lot.

Immediately south of the site is vacant land which is proposed to be redeveloped in the near future with commercial warehouses, retail shops, and a hotel. This land was formerly used by Lockheed Plant B6. MP Montanous occupies the commercial building immediately north of the site and uses the property for warehouse purposes. Northwest of the site and beyond Kenwood Street is Hydra Electric at 3151 Kenwood Street (Figure 2). The Bob Hope Airport (formerly known as the Burbank Airport) is located further southwest of the site.

No evidence of aboveground storage tanks (ASTs), underground storage tanks (USTs) or other possible hazardous materials or wastes were noted being stored by off-site facilities along the site property line.

3 USER PROVIDED INFORMATION

The following sections summarize information obtained by the user to assist the environmental professional in identifying the possibility of RECs in connection with the subject property, and to fulfill the user's responsibilities in accordance with Section 6 of ASTM Standard E 1527-13. A copy of the user questionnaire as completed by Mr. Timur Tecimer of Overton Moore Properties is presented in Appendix B.

3.1 Current Title Information

A Preliminary Title Report provided by the client was reviewed by Ardent. The title report prepared by First American Title Company was dated February 12, 2016. According to the Preliminary Title Report, the title of the property is held by "The Burbank-Glendale-Pasadena Airport Authority, a public entity" (Airport Authority). A copy of the Preliminary Title Report is provided in Appendix C.

3.2 Environmental Liens or Activity and Use Limitations (AULs)

Mr. Tecimer indicated that no environmental liens or AULs against the subject property have been filed or recorded under federal, state, or local law.

3.3 Specialized Knowledge

Mr. Tecimer indicated that, for purposes of this assessment, the client has no specialized knowledge or experience pertaining to the site or the adjacent properties that is material to RECs in connection with the subject property.

3.4 Commonly Known or Reasonably Ascertainable Information

In general, Mr. Tecimer was unaware of commonly known or reasonably ascertainable information pertaining to the site and referred Ardent to environmental reports prepared for the site and surrounding properties.

3.5 Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to fair market value of the property if the property was not affected by hazardous substances or petroleum products. Mr. Tecimer indicated the purchase price reflects fair market value.

3.6 Reason for Performing Phase I ESA

Ardent was retained to perform the Phase I ESA as part of the real estate due diligence as part of a possible purchase of the site.

3.7 Other User Provided Information

No environmental reports associated with the subject property were available from the property owner or in regulatory files for the site. However, as discussed above, Ardent recently completed a Phase I ESA and Document Review for the 60-acre property located immediately south of the site that was formerly occupied by Lockheed Plant B6. During this investigation, numerous environmental reports were reviewed for the larger Lockheed Plant B6 property. Based on our review, the subject property was not included in the reported boundary of the "Plant." Ardent also reviewed environmental reports regarding the former

Aviall, Inc. (Aviall) property located immediately west of the site and beyond Kenwood Street.

As noted on historical aerial photographs and information provided from building permits, the site was used for agricultural purposes or vacant land in 1928. In 1938 and 1952, the southern portion of the site (3120 Kenwood Street) and the northern portion of the property (3130 Kenwood Street) appeared to contain sparse residences and a possible office. From at least 1954 through 1964, the southern portion of the site was used as a parking lot and the northern parcel appeared to contain residences and possibly small commercial and/or retail buildings along Kenwood Street (Figure 3). Based on building permit records, it appears that both parcels were acquired in 1976 by a manufacturing business west of Kenwood Street (located at 3111 Kenwood Street) and the northern parcel was redeveloped as a parking lot, similar to the southern property use. The subject property has been used as a parking lot since that time. No reported manufacturing operations have been conducted on the site.

Based on this information, there is a low likelihood that historical land use at the site has had a significant environmental impact of the site. However, a number of industrial facilities in the immediate site vicinity have been under investigation and remediation for VOCs and hexavalent chromium by regulatory agencies. Ardent reviewed files regarding these facilities which are briefly summarized below.

3.7.1 Groundwater Investigations

The site is located within the San Fernando Valley Groundwater Basin which has been designated by EPA as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses (Figure 4). The areas of groundwater contamination, designated as "Operable Units," contain chemicals such as VOCs, namely trichloroethene (TCE) and tetrachloroethylene (PCE), and other chemicals such as hexavalent chromium and 1,4-dioxane. The site lies within the "Burbank Operable Unit." A number of investigations have been completed over the years on surrounding properties, and based on the results, a number of businesses (including Lockheed and Aviall) have been named as potentially responsible parties (PRPs) for contributing to the groundwater issues. Groundwater investigations

completed in the site vicinity have shown elevated concentrations of PCE, TCE, and hexavalent chromium. Groundwater has been measured on the adjacent property at depths of approximately 220 feet below the ground surface (bgs) and flows in a southeasterly direction.

3.7.2 Adjacent Aviall, Inc. (Aviall) Property

A number of environmental reports were obtained from the Airport Authority and the State Water Resources Control Board (SWRCB) GeoTracker website regarding the former Aviall property located immediately west of the site and beyond Kenwood Street at 3111 Kenwood Street. This property has been occupied by a number of facilities including Aviation Power Supply, Aviall, Hollywood Rental Company, 24/7 Studio Equipment, Airport Authority, and Hertz Entertainment Services. Based on building department permits, it appears that Aviation Power Supply acquired the subject property for use as a parking lot in 1976. Based on the reports reviewed, the subject site since this time has always been used as a parking lot and was never investigated as part of the regulatory inquiries.

Aviall used the adjacent property for repair, maintenance, inspection, testing and overhauling jet engines. These operations also included a plating line. During the 1990s, Aviall was investigated by the Regional Water Quality Control Board, Los Angeles Region (RWQCB) under its Well Investigation Program (WIP) as part of the San Fernando Valley Groundwater Basin Superfund Site. Over the years, a number of investigations were completed including the collection and analyses of soil, soil gas, and groundwater samples. Work was completed under the direction and oversight of the RWQCB and Federal EPA. Based on the results of these investigations, the RWQCB issued a soil no further action (NFA) letter in 1996. It should be noted, that the subject property was always used as a parking lot, and therefore, was not included in any investigations associated with the RWQCB.

In 2012, the RWQCB required Aviall to investigate possible hexavalent chromium in selected areas of its property. Although hexavalent chromium was detected, the concentrations were reported to be low enough not to threaten groundwater or human health. The latest investigation is still being reviewed by the RWQCB. Based

on the close proximity of this property from the site, residual concentrations of some contaminants (i.e. VOCs) might be present in soil gas beneath the subject property. However, there is a low likelihood that these contaminants would be high enough to pose a potential human health risk through vapor intrusion. There is a low likelihood that other contaminants such as petroleum hydrocarbons or metals have impacted soil at the subject property.

3.7.3 Adjacent Lockheed Plant B6 Property

In the early-1940s, the Burbank Airport (currently known as the “Bob Hope Airport”) was constructed for use during World War II. Beginning in the early-1940s through the late-1990s, Lockheed used the adjacent property for aircraft research, manufacturing, warehouse, maintenance, and office purposes, mainly for the United States Department of Defense. This facility was known as “Plant B6” (Figure 3).

The Plant was used for aircraft hangers, aircraft assembly and testing areas, maintenance areas, and office space. Operations at the Plant B6 included aircraft parking, final assembly and flight support, classified aircraft research and development, minor subassembly work, aircraft functional testing, and ground support. Supporting activities included cleaning and painting, minor tooling, welding, and parts and component machining. Chemicals and materials used and/or stored at the site to support these operations included aircraft fuels, biocides, descalers, fuel oils, gasoline, paints, solvents, acids, caustics, and plastic resins and hardeners.

Since the early-1990s, the adjacent property was investigated by the RWQCB under its WIP as part of the San Fernando Valley Groundwater Basin Superfund Site. Over the years, a number of investigations were completed including the collection and analyses of soil, soil gas, and groundwater samples. Work was completed under the direction and oversight of the RWQCB and Federal EPA. Based on the results of these investigations, the RWQCB issued a number of NFA letters for the Plant in 1996. In 1997 and 1998, most of the buildings, foundations, and pavement were demolished and removed from this property. The remaining buildings were demolished in 2001. Based on the close proximity of this property from the site, residual concentrations of some contaminants (i.e. VOCs) might be present in soil

gas beneath the subject property. However, there is a low likelihood that these contaminants would be high enough to pose a potential human health risk through vapor intrusion. There is a low likelihood that other contaminants such as petroleum hydrocarbons or metals have impacted soil at the subject property.

3.7.4 Current Investigations

Based on the results of Ardent's Phase I ESA of the former Lockheed Plant B6 property, Ardent recommended the completion of a soil gas survey throughout the property to assess whether residual VOC contamination might pose a threat to future occupants through vapor intrusion (Ardent, 2016a). Based on the results, no detectable to low concentrations were reported and no engineering controls would be needed for future buildings (Ardent, 2016b).

4 PHYSICAL SETTING

The following sections include discussions of topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon our document review and our visual reconnaissance of the site and adjacent areas.

4.1 Site Topography

Based on the review of the United States Geological Survey (USGS) 7.5 Minute Series, Burbank, California, Topographic Quadrangle Map dated 1994, photorevised from 1966, the site has an approximate elevation of 730 feet above mean sea level (msl) and slopes to the southeast.

4.2 Geology

The site is located in the western portion of the Transverse Range Geomorphic Province, on the northwestern structural block of the Los Angeles basin. The Verdugo Mountains, a surface expression of the Verdugo Faults within the San Fernando Valley, are located approximately one-mile northeast of the site. The San Fernando Valley contains up to 2,000 feet of alluvial sediments resting on mid-Tertiary marine sedimentary beds and volcanics. The site is underlain by Quaternary age sand and gravels derived from crystalline and sedimentary rocks in the surrounding mountains.

4.3 Oil and Gas Maps

Based on a review of the Division of Oil, Gas, and Geothermal Resources (DOGGR) on-line well finder the site does not lie in an active oil field and no oil wells have been drilled on the site or in the immediate site vicinity.

4.4 Site Hydrology

The following sections discuss the site hydrology in terms of both surface waters and groundwater.

4.4.1 Surface Waters

No natural surface water bodies, including ponds, streams, or other bodies of water are present on or adjacent to the site.

4.4.2 Groundwater

As noted above, the site is located within the San Fernando Valley Groundwater Basin which has been designated by EPA as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses (Figure 4). The areas of groundwater contamination, designated as “Operable Units,” contain chemicals such as VOCs, namely TCE and PCE, and other chemicals such as hexavalent chromium and 1,4-dioxane. The site lies within the “Burbank Operable Unit.” A number of investigations have been completed over the years on surrounding properties, and based on the results, a number of businesses (including Lockheed and Aviall) have been named as PRPs for contributing to the groundwater issues. Groundwater investigations completed in the site vicinity have shown elevated concentrations of PCE, TCE, and hexavalent chromium. Groundwater has been measured on the adjacent property at depths of approximately 220 feet bgs and flows in a southeasterly direction.

5 HISTORICAL LAND USE

Ardent conducted a historical record search for both the site and surrounding areas. This included a review of one or more of the following sources that were found to be both reasonably ascertainable and useful for the purposes of this Phase I ESA: historical aerial photographs,

historical fire insurance maps, historical city directories, building permits and plans, topographic maps, property tax records, zoning/land use records, and a review of prior environmental assessment reports regarding the site. Copies of historical land use information are provided in Appendix C.

5.1 Summary of Historical Land Use of the Property

The site was used for agricultural purposes or vacant land in 1928. In 1938 and 1952, the southern portion of the site (3120 Kenwood Street) and the northern portion of the property (3130 Kenwood Street) appeared to contain sparse residences and a possible office. From at least 1954 through 1964, the southern portion of the site was used as a parking lot and the northern parcel appeared to contain residences and possibly small commercial and/or retail buildings along Kenwood Street. Based on building permit records, it appears that both parcels were acquired in 1976 by a manufacturing business west of Kenwood Street (located at 3111 Kenwood Street) and the northern parcel was redeveloped as a parking lot, similar to the southern property use. The subject property has been used as a parking lot since that time. No reported manufacturing operations have been conducted on the site.

5.2 Summary of Historical Land Use of Adjoining Properties

The site vicinity was used for agricultural purposes, vacant land, and some residential purposes from at least 1928 through the late-1930s. By the early-1940s, properties in the site vicinity started to be developed for commercial, industrial, and some residential purposes.

5.3 Historical Aerial Photographs

Historical aerial photographs for selected years between 1928 and 2012 were provided by EDR. The following presents a summary of our review.

- **1928** – The site appeared to be used for agricultural purposes or vacant land. The surrounding properties were used for agricultural purposes and farm houses. Cohasset Street, Kenwood Street and San Fernando Road were present in aerial photographs.
- **1938 and 1952** – The southern and the northern portion of the property contained what appeared to be residences. Additional residential structures were noted north, east, and west of the site. The Burbank Airport was noted further southwest of the site.

- **1954 and 1964** – The southern portion of the site was used as a parking lot and the northern portion of the property appeared to be used for residential or office purposes. In 1964, the northern portion of the site appeared to be used for residential purposes in the eastern two thirds and possibly commercial or retail purposes in the western one third, along Kenwood Street. The surrounding properties appear to be used for commercial/industrial purposes.
- **1977, 1981, 1989, 1994, 2002, 2005, 2009, 2010, and 2012** – The entire site was used as a parking lot. The site vicinity continued to be used for commercial/industrial purposes.

5.4 Building Permits

Building permits for the site are issued and maintained at by the BBD. No building permits were available for the northern parcel at 3130 Kenwood Street. Records for the southern property at 3120 Kenwood indicate that this parcel was used for a residence in 1942, and office and supply room in 1946, and paved as a parking lot in 1952. In 1976, Aviation Power Supply was listed as the property owner and was issued a building permit to pave the property as an asphalt parking lot. These records correlate with other historical records such as aerial photographs.

Ardent also reviewed files for the address of 3111 Kenwood Street, due to the fact that the owner of this property also owned the subject site. There was no indication in this file that would suggest that any manufacturing operations were completed on the subject site. Owners of this property also included Aviation Power Supply, Aviall, Hollywood Rental Company, 24/7 Studio Equipment, Airport Authority, and Hertz Entertainment Services.

5.5 Historical Topographic Maps

Historical topographic maps were provided by EDR for review. The maps were dated 1896, 1900, 1901, 1902, 1920, 1926, 1953, 1966, 1972, and 1994. The 1896, 1900, 1901, 1902, 1920, and 1926 maps did not show site specific details. The site was shown as vacant land on the 1953, 1966, 1972, and 1994 maps. Properties in the surrounding vicinity were noted as commercial use or shaded pink indicating “urban development.”

5.6 Interviews

Interviews were conducted by Ardent with key site personnel (e.g., past and present owners, operators, and/or occupants) with the objective of obtaining information indicating RECs in connection with the subject property. The following are the site personnel interviewed for purposes of this assessment.

5.6.1 Interview with Owner

Ardent interviewed Mr. John Hatanaka, Senior Deputy Executive Director with the Airport Authority, owners of the site. The information obtained is presented throughout this report.

5.6.2 Interview with Site Manager

The site was vacant, therefore, a site manager was not available for an interview.

5.6.3 Interviews with Occupant

The site was vacant, therefore no occupants were present.

5.6.4 Interviews with Local Government Officials

Representatives of local regulatory agencies were interviewed during completion of this report. The information obtained is presented throughout this report.

5.6.5 Interviews with Others

No other interviews were conducted during this Phase I ESA.

5.7 Previous Reports and Documents

No previous environmental reports were available for the site. However, Ardent reviewed a number of reports for surrounding properties. These reports are summarized in Section 3.7.

6 SITE RECONNAISSANCE

The site and site vicinity reconnaissance was performed by Ardent on February 16, 2016. The site reconnaissance involved a walking tour of the site and visual observations of adjoining properties. At the time of the site reconnaissance, the weather was clear and sunny. Selected

photographs taken during these activities are included in Appendix A. At the time of the site reconnaissance, the site was a vacant parking lot.

6.1 Use and Storage of Hazardous Substances and Petroleum Products

The use and storage of hazardous substances and petroleum products was not observed during the site reconnaissance.

6.2 Storage and Disposal of Hazardous Wastes

The storage and disposal of hazardous wastes was not observed at the time of the site reconnaissance.

6.3 Unidentified Substance Containers

No unidentified substance containers were observed on site during the site reconnaissance.

6.4 Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)

No ASTs or evidence of USTs were noted at the site. According to Mr. Hatanaka, no USTs have been used on-site.

6.5 Evidence of Releases

Evidence of chemical releases on the site, such as odors, stressed vegetation, stains, leaks, pools of liquids, and spills, was not observed during the site reconnaissance.

6.6 Polychlorinated Biphenyls (PCBs)

Historically, PCBs (a group of hazardous substances and suspected human carcinogens) were widely used as an additive in cooling oils for electrical components. Typical sources of PCBs can include electrical transformers. No electrical transformers were noted on the site.

6.7 Suspect Asbestos-Containing Building Materials (ACMs)

The manufacture of most ACMs in the United States was phased out in the 1970s, ending in 1980. Previously manufactured ACMs that were in stock continued to be used through approximately 1981. Some non-friable ACMs are still manufactured (e.g. roofing mastics).

In general, buildings constructed after 1981 have a negligible potential to contain friable ACMs and a low potential for most non-friable ACMs, with the exception of roofing materials. Since the site is currently vacant, the presence of ACMs is not likely.

6.8 Lead Based Paint (LBP)

The manufacture of LBP was phased out in approximately 1978. The site is currently vacant land, therefore LPB is not likely present.

6.9 Indications of Water Damage or Mold Growth

Since no structures are present on-site, no visual indications of water damage or mold growth were observed at the site during the site reconnaissance.

6.10 Wastewater Systems

No wastewater systems were observed during the site reconnaissance.

6.11 Stormwater Systems

No stormwater systems were noted during the site reconnaissance.

6.12 Wells

No groundwater wells (agricultural, monitoring, or municipal) were noted on-site.

6.13 Other Subsurface Structures

A metal pipe extending above the ground surface was noted in the western portion of the site. According to Mr. Hatanaka, the pipe was used by a former occupant for a sign or canopy. No other subsurface structures (e.g., sumps, vaults, oil/water separators, and other surface impoundments) were noted during the site reconnaissance.

6.14 Other Issues

No other on- or off-site issues of environmental concern were noted.

7 ENVIRONMENTAL DATABASE SEARCH

A computerized environmental information database search was performed by EDR for this Phase I ESA on February 11, 2106. The database search included federal, state, local, and tribal databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted facilities of environmental concern is presented in Appendix E. In addition, a description of the assumptions and approach to the database search is provided in Appendix E. The review was conducted to evaluate whether the site or properties within the vicinity of the site have been reported as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

One unmapped property, due to poor or inadequate address information, was identified in the database report. The San Fernando Valley Groundwater Basin has been identified and is discussed below. The following paragraphs describe the databases that contain noted properties of environmental concern, and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject site.

As previously discussed, along with 3120 and 3130 Kenwood Street, the site was also associate with the address of 2801 North Hollywood Way. This address was also assigned to portions of the larger Lockheed Plant B6 property. The site address was listed on numerous databases as presented below. Due to the site use as residential and possible commercial, these listing were likely associated with the larger Lockheed Plant B6 property.

7.1 Federal National Priorities List (NPL): Distance Searched – 1 mile

The NPL is the USEPA's database of uncontrolled or abandoned hazardous waste properties identified for priority remedial actions under the Superfund program. This database includes proposed NPL listings.

The site address were not listed on this database. The site is located within the San Fernando Valley Groundwater Basin which has been designated by EPA as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses (Figure 4). The areas of groundwater contamination, designated as "Operable Units," contain chemicals such as VOCs, namely TCE and PCE, and other chemicals such as

hexavalent chromium and 1,4-dioxane. The site lies within the “Burbank Operable Unit.” A number of investigations have been completed over the years on surrounding properties, and based on the results, a number of businesses (including Lockheed and Aviall) have been named as PRPs for contributing to the groundwater issues. Groundwater investigations completed in the site vicinity have shown elevated concentrations of PCE, TCE, and hexavalent chromium. Groundwater has been measured on the adjacent property at depths of approximately 220 feet bgs and flows in a southeasterly direction.

Based on the depth to groundwater and investigations completed by Ardent at close by properties (see Section 3.7), there is a low likelihood that VOC impacted groundwater or soil gas would pose a possible human health risk through vapor intrusion of future buildings. There has been no indication that historical site land use has contributed contaminants to the groundwater issues. However, small buildings, possibly used for commercial use, were noted on historical aerial photographs prior to 1976.

7.2 Federal Delisted NPL: Distance Searched – 0.5 mile

This database contains delisted NPL properties under the Superfund program. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the USEPA uses to delete properties from the NPL. In accordance with 40 Code of Federal Regulations (CFR) 300.425. (e), properties may be deleted from the NPL where no further response is appropriate.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

7.3 Federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List: Distance Searched – 0.5 mile

The CERCLIS database contains properties which are either proposed or on the NPL and properties which are in the screening and assessment phase for possible inclusion on the NPL. This database also includes properties listed as No Further Remedial Action Planned (NFRAP).

The site addresses are not listed on the CERCLIS database. Portions of the San Fernando Valley Groundwater Basin are listed on the CERCLIS database due to the VOC contaminated groundwater.

Four other facilities located greater than 0.3-mile from the site were listed on the NFRAP database. Based on the distance, direction, depth to groundwater, and/or regulatory status, these facilities would not be considered an environmental concern to the site.

7.4 Federal Corrective Action Report (CORRACTS): Distance Searched – 1 mile

The USEPA maintains this database of Resource Conservation and Recovery Act (RCRA) facilities that are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The site was not listed on this database. One facility located approximately 0.7-mile southeast of and downgradient from the site was listed. Based on the distance and direction of this facility from the site, and depth to groundwater, this facility would not be considered an environmental concern to the site.

7.5 Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities List: Distance Searched – 0.5 mile

The RCRA TSD database (non-CORRACTS) is a compilation by the EPA of facilities that report generation, storage, transportation, treatment, or disposal of hazardous waste.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

7.6 Federal RCRA Generators List: Distance Searched – Site and Adjoining Properties

This list identifies sites that generate hazardous waste as defined by RCRA. Inclusion on this list is for permitting purposes and is not indicative of a release.

The site was not listed on this database. No large quantity generator of hazardous wastes were noted on the regulatory databases. Former occupant Aviall and current occupant

Hertz Entertainment Services at 3111 Kenwood Street were listed as small quantity generators. No violations were noted. Listing on this database is not indicative of a release.

7.7 Federal Institutional Control/Engineering Control Registries: Distance Searched – Site

These lists identify properties with engineering and/or institutional controls. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on the site. Deed restrictions are generally required as part of the institutional controls.

Although the site is not listed, the San Fernando Valley Groundwater Basin is listed on this database.

7.8 Federal Emergency Response Notification System (ERNS) List: Distance Searched – Site

The ERNS database, maintained by the USEPA, contains information on reported releases of oil and hazardous substances.

Site was not listed on this database.

7.9 Federal Brownfield List: Distance Searched – 0.5 mile

The USEPA Brownfield database, entitled Targeted Brownfield's Assessments (TBA), lists properties for which the USEPA is providing funding and/or technical support for environmental assessments and investigations. The objective of the TBA is to promote cleanup and redevelopment of undesirable properties with environmental issues.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

7.10 State Calsites Database (Calsites) or State-Equivalent CERCLIS: Distance Searched – 1 mile

The Calsites database, also known as the State-equivalent CERCLIS, is maintained by the Cal-EPA DTSC. This database contains information on AWP and both known and potentially contaminated properties. Two-thirds of these properties have been classified, based on available information, as needing no further action (NFA) by the Department of Toxic Substances Control (DTSC). The remaining properties are in various stages of review and remediation to determine if a problem exists. These properties are presented by EDR on the EnviroStor databases.

The site was not listed on this database. Seventeen facilities were listed, one of which was located hydraulically upgradient from the site. The facility, Photo Chemetch Corporation, was listed as being approximately 0.5-mile northwest of and upgradient from the site. Based on the distance, there is a low likelihood that soil contamination exists at the site from this off-site facility. As noted here, the site lies within the Burbank Operable Unit of the San Fernando Valley Superfund Site. Groundwater beneath the site is likely impacted with VOCs.

The remaining sixteen facilities were located 0.28-mile from the site in a cross- to downgradient direction. Some of these facilities are listed as needed no further action. Based on the distance, direction, depth to groundwater, and/or regulatory status, these facilities would not be considered an environmental concern to the site.

7.11 State Solid Waste Landfill Sites (SWLF): Distance Searched – 0.5 mile

The SWLF database consists of open and closed solid waste disposal facilities and transfer stations. The data comes from the Integrated Waste Management Board's Solid Waste Information System (SWIS) and the SWRCB Waste Management Unit Database (WMUD) database.

The site was not listed. One facility was listed on this database as being located approximately 0.38-mile northwest of and potentially upgradient from the site. This facility is listed as a recycling center. Based on the distance, depth to groundwater and type of facility, this facility would not be considered an environmental concern to the site.

7.12 State Leaking Underground Storage Tank (LUST) Lists: Distance Searched – 0.5 mile

The LUST information system is obtained from by the SWRCB and the RWQCB (Regional Water Quality Control Board).

The site address of 2801 North Hollywood Way is listed as “Lockheed Air Terminal,” and therefore, is likely associated with the off-site Lockheed Plant B6 property.

Seven listings for properties in the site vicinity were noted on this database. None of which were located adjacent to or in close proximity to the site. The seven facilities are located greater than 0.28-mile cross- to downgradient; six of which were listed as closed cases. Based on the distance, direction, depth to groundwater, and/or regulatory status, these facilities would not be considered an environmental concern to the site.

7.13 State Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Registration List: Distance Searched – Site and Adjoining Properties

UST and AST databases are provided by the SWRCB. Inclusion on these lists is for permitting purposes and is not indicative of a release.

Neither the site nor the adjoining properties were listed on this database.

7.14 State Voluntary Cleanup Programs (VCPs): Distance Searched – 0.5 mile

The State VCP database lists low threat level properties with either confirmed or unconfirmed releases. Project proponents have requested that the DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC’s costs.

Neither the site nor facilities located within the search radius were listed on this database.

7.15 Indian Reservations: Distance Searched – 1 mile

This list depicts Indian administered lands of the United States that have an area equal to or greater than 640-acres. No Indian Reservations were listed within a 1-mile radius from the site. Due to the lack of Indian Reservations within 1-mile of the site, other tribal database listings required by ASTM and AAI were deemed not applicable. These listings

would include tribal-equivalent NPL, CERCLIS, Landfill and/or Solid Waste Disposal, LUST, UST and AST Registrations, Institutional Control/Engineering Control Registries, VCPs, and Brownfields.

7.16 Other Non-ASTM and AAI Database: Distance Searched – Site

Other databases were included in the EDR Report, but are not required by ASTM or AAI. Based on our review of these databases, the site addresses of 3120 and 3130 Kenwood Street were not listed on these databases. The address of 2801 North Hollywood Way was listed on a number of these databases, although, was also noted as “Lockheed.” Based on this designation, these listing are likely associated with the former Lockheed Plant B6 property located south of the site.

8 VAPOR ENCROACHMENT CONDITION (VEC)

Ardent completed a VEC study for the site using Tier 1 criteria as recommended by ASTM E 2600-15. The Tier 1 screening identifies surrounding facilities that pose a possible vapor intrusion source to the site based on the results of the Phase I ESA investigations and certain criteria outlined by ASTM. These criteria include a certain distance from the target site (referred to by ASTM as within the “area of concern”); the types of chemicals used (referred to by ASTM as the “chemicals of concern”); and a plume test to determine if the plume associated with a source of contamination is close enough to the site to impact indoor air quality. Based on our review of regulatory records, files, databases, client furnished data, site reconnaissance activities, and previous soil gas data recently completed by Ardent at the former Lockheed Plant B6 property, there is a low likelihood that elevated concentrations of VOCs are present in soil gas beneath the site from groundwater or these off-site releases that would be considered a possible risk for vapor intrusion.

However, Ardent is recommending that a soil gas survey be completed at the site to verify this assumption and due to the uncertainty of the historical commercial use on the subject property. If concentrations of VOCs are discovered in soil gas, these constituents should be evaluated based on a possible human health risk criteria (i.e. future vapor intrusion), as well as a threat to groundwater.

9 REGULATORY RECORDS REVIEW

The South Coast Air Quality Management District (SCAQMD), RWQCB, Los Angeles County Department of Public Health, Environmental Programs (LACDPH), Los Angeles County Department of Public Works (LACDPW), the Department of Toxic Substances Control (DTSC), the City of Burbank Fire Department (BFD) are the lead regulatory agencies for permitting and regulating USTs, ASTs, LUST cases, and/or facilities that use, store, or generate hazardous waste or hazardous materials. Ardent requested file reviews using the site addresses of 3120 and 3130 Kenwood Street and 2801 North Hollywood Way.

9.1 South Coast Air Quality Management District (SCAQMD)

Records regarding the site were reviewed using the SCAQMD FIND website. The site address of 3120 and 3130 Kenwood Street were not listed.

The site address of 2801 North Hollywood Way was listed as “Lockheed.” Based on this information, these files were likely associated with the former Lockheed Plant B6 property and not the subject site.

9.2 Regional Water Quality Control Board, Los Angeles Region (RWQCB)

Ardent searched the SWQCB GeoTracker website for possible files at the RWQCB regarding the site. The addresses of 3120 and 3130 Kenwood Street were not listed.

According to GeoTracker, the site address of 2801 North Hollywood Way was listed on this database as “Lockheed Plant B-6” a closed leaking underground storage tank (LUST) case as of October 30, 1996.

9.3 Los Angeles County Department of Public Works (LACDPW)

Records regarding the site were requested from the LACDPW. According to the LACDPW, records regarding properties in Burbank were forwarded to the City of Burbank Fire Department (BFD).

9.4 Los Angeles County Department of Public Health (LACDPH)

Records regarding the site were requested from the LACDPH. According to the LACDPH, no records regarding the site were found.

9.5 City of Burbank Fire Department (BFD)

The BFD is the lead regulatory agency for UST and industrial waste closure activities. Records regarding the site were requested from the BFD. According to the BFD, records regarding the site address of 2801 North Hollywood Way where available, although where associated with the former Lockheed Plant B6 property. Most of the records associated with this address were regarding the removal, remediation, and closure of seven USTs located within the larger property (northwest of the site). No records regarding the site were noted.

9.6 Department of Toxic Substances Control (DTSC)

Ardent searched the DTSC Envirostor website for records regarding the site. The site was not listed on the Envirostor database.

10 FINDINGS, OPINIONS AND CONCLUSIONS

Based upon the results of this Phase I ESA the following findings, opinions and conclusions are provided.

10.1 Findings and Opinions

The following presents a summary of findings and opinions associated with this Phase I ESA performed for the subject property, including known or suspect RECs, controlled RECs, and de minimus environmental conditions (i.e., conditions that generally do not present a material risk of harm to public health or the environment).

- The site was used for agricultural purposes or vacant land in 1928. In 1938 and 1952, the southern portion of the site (3120 Kenwood Street) and the northern portion of the property (3130 Kenwood Street) appeared to contain sparse residences and a possible office. From at least 1954 through 1964, the southern portion of the site was used as a parking lot and the northern parcel appeared to contain residences and possibly small commercial and/or retail buildings along Kenwood Street. Based on building permit records, it appears that both parcels were acquired in 1976 by a manufacturing business west of Kenwood Street (located at 3111 Kenwood Street) and the northern parcel was redeveloped as a parking lot, similar to the southern property use. The subject property

has been used as a parking lot since that time. No reported manufacturing operations have been conducted on the site.

- The site is located within the San Fernando Valley Groundwater Basin which has been designated by EPA as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses. The areas of groundwater contamination, designated as “Operable Units,” contain chemicals such as VOCs, namely TCE and PCE, and other chemicals such as hexavalent chromium and 1,4-dioxane. The site lies within the “Burbank Operable Unit.” A number of investigations have been completed over the years, and based on the results, Lockheed and others have been named as PRPs for contributing to the groundwater issues. Groundwater investigations completed in the site vicinity have shown elevated concentrations of PCE, TCE, and hexavalent chromium. Groundwater has been measured immediately south of the site at depths of approximately 220 feet bgs and flows in a southeasterly direction. There are no groundwater wells located on-site and the site has not been investigated by regulatory agencies as a possible contributor to the groundwater issues.
- There have been a number of investigations completed at properties located within the site vicinity as part of the RWQCB WIP associated with the San Fernando Valley Groundwater Basin Superfund Site. Two such properties include the large Lockheed Plant B6 property located immediately south of the site and the Aviall property located immediately west of the site. Although these facilities have obtained no NFA letters from the RWQCB for soil, laboratory results have shown residual VOC soil gas concentrations at each property. Ardent recently completed a soil gas survey at the Lockheed property as part of OMPs real estate due diligence and to obtain current site conditions. Based on the results, no detectable to low concentrations of VOCs were noted that would pose a possible human health risk to future occupants through vapor intrusion.
- No other- on or off-site environmental issues were noted for the site.

10.2 Conclusions

Ardent has performed this Phase I ESA in general conformance with the scope and limitations of the ASTM Practice E 1527-13, ASTM Practice E 2600-15, and the EPA Standards and Practices for AAI, Final Rule (40 CFR, Part 312), for a property, currently being used as a parking lot, located at 2801 North Hollywood Way located in the city of Burbank, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. No evidence or indication of RECs, or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property has been revealed, with the exception of the regional groundwater issue and possibly uncertainty of the small commercial uses at the site.

11 RECOMMENDATIONS

Although there is a low likelihood that elevated concentrations of residual VOCs are present in soil gas at concentrations exceeding human health risk criteria due to off-site sources, Ardent recommends completing a soil gas survey throughout the site to verify these assumptions. The soil gas survey would also provide a screening technique to assess whether “hot-spots” are present due to possible on-site commercial use (i.e. possible contributions to groundwater issues). Concentrations of VOCs, if present, should be evaluated based on possible human health risks and threat to groundwater criteria.

13 QUALIFICATIONS STATEMENT AND SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

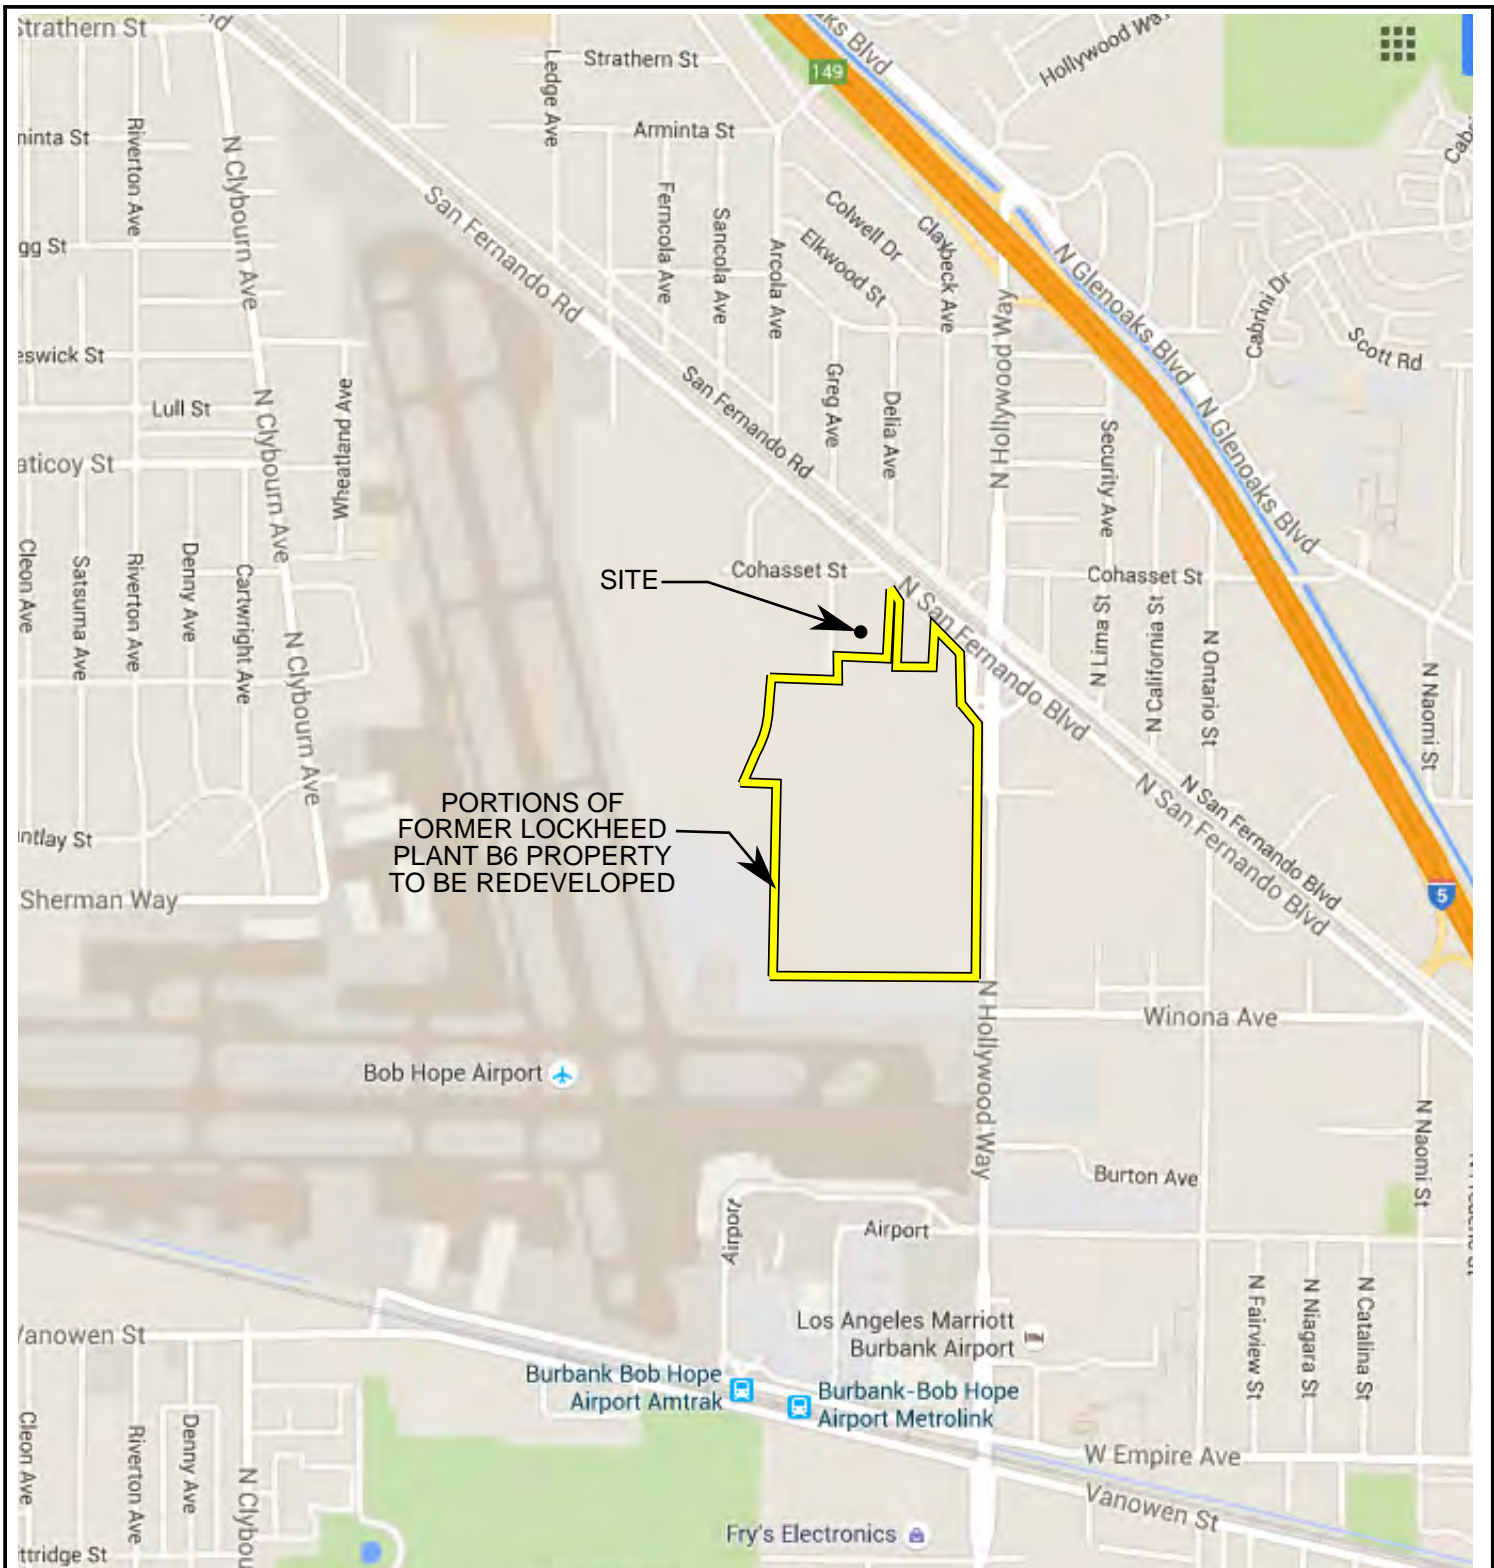

Mr. Paul Roberts states that the Phase I ESA was performed under his direct supervision, and that he has reviewed and approved the report, and the methods and procedures employed in the development of the report conform to the minimum industry standards. Mr. Roberts certifies that Ardent project personnel and subcontractors are properly licensed and/or certified to do the work described herein.

Pursuant to Paragraph 12.13 of the ASTM Standard E1527-13:

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Paul Roberts, P.G.
Principal Geologist

- NOTES:**
1. The areas of contamination shown on this map represent generalized two-dimensional approximations based on water quality analysis from Monitoring Wells, Facility Wells, and Production Wells where the top of screened interval is within 50 feet of the water table.
 2. Due to the possible vertical zonation of contamination, a well within an identified area of contamination may produce water with contamination different than that indicated on this map.
 3. Areas of contamination are based on the most recent record available for wells sampled.
 4. Areas outside the colored area of contamination represented on this map may also be contaminated. However, the most recent data available from wells located outside the colored area of contamination on this map are below the detection limit of 2 µg/L.
 5. The original figure is produced in color. Significant information is lost if copied in black and white.

APPENDIX B
USER QUESTIONNAIRE

PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA) USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user of the Phase I ESA* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

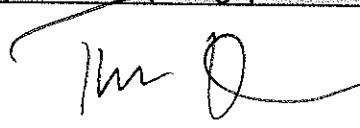

Project Information	
Facility Name and Address:	Aerial Property - Kenwood, Burbank
Reason for the Phase I ESA:	Property Aca
Type of Property:	PARKING lot
Site Owner and Contact Information:	Burbank Airport Authority
Site Contact Name and Contact Information:	John Hatanaka 818-729-2225
Tax Assessors Parcel Number (APN):	

	Yes	No
1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, state, or local law?		X
2. Are you aware of any activity use limitations, such as engineering controls (engineered caps, liners, treatment methods, etc.), land use restrictions, or institutional controls (administrative measures restricting groundwater use, construction, or property use, etc.) that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?	X	X ^{TD}
3. Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property so that you would have specialized knowledge of the chemicals or processes used by this type of business?		X
4a. Does the purchase price being paid for the subject property reasonably reflect the fair market value of the subject property?	X	
4b. If you conclude that there is a difference in fair market price, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?		
5. Are you aware of any commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as a user,	X	
5 (a) Do you know of the past uses of the property?	X	X ^{TD}
5 (b) Do you know of any specific chemicals that are present or were once present on the subject property?		X
5 (c) Do you know of spills or other chemical releases that have taken place at the subject property?		X

5 (d) Do you know of any environmental cleanups that have taken place at the subject property?		X
6. As the user of the EIA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?	X	

If you answered "yes" to any of the questions (except 4a) above, please provide more detail below, or attach additional information to this document:

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. Commitment

Thank You for your confidence and support. We at First American Title Insurance Company maintain the fundamental principle:

Customer First!

First American Title Insurance Company
INFORMATION

The Title Insurance Commitment is a legal contract between you and the company. It is issued to show the basis on which we will issue a Title Insurance Policy to you. The Policy will insure you against certain risks to the land title, subject to the limitations shown in the policy.

The Company will give you a sample of the Policy form, if you ask.

The Commitment is based on the land title as of the Commitment Date. Any changes in the land title or the transaction may affect the Commitment and the Policy.

The Commitment is subject to its Requirements, Exceptions and Conditions.

This information is not part of the title insurance commitment.

COMMITMENT FOR TITLE INSURANCE

Issued by

First American Title Insurance Company

Agreement to Issue Policy

We agree to issue a policy to you according to the terms of this Commitment.

When we show the policy amount and your name as the proposed insured in Schedule A, this Commitment becomes effective as of the Commitment Date shown in Schedule A.

If the Requirements shown in this Commitment have not been met within six months after the Commitment Date, our obligation under this Commitment will end. Also, our obligation under this Commitment will end when the Policy is issued and then our obligation to you will be under the Policy.

Our obligation under this Commitment is limited by the following:

The Provisions in Schedule A.

The Requirements in Schedule B-1.

The Exceptions in Schedule B-2.

The Conditions.

This Commitment is not valid without Schedule A and Sections 1 and 2 of Schedule B.

SCHEDULE A

1. Commitment Date: February 04, 2016 at 7:30 A.M.

APN: 2466-011-907 and 2466-028-906

SCHEDULE B

SECTION ONE REQUIREMENTS

The following requirements must be met:

- (A) Pay the agreed amounts for the interest in the land and/or the mortgage to be insured.
- (B) Pay us the premiums, fees and charges for the policy.
- (C) Documents satisfactory to us creating the interest in the land and/or the mortgage to be insured must be signed, delivered and recorded.
- (D) You must tell us in writing the name of anyone not referred to in this Commitment who will get an interest in the land or who will make a loan on the land. We may then make additional requirements or exceptions.
- (E) Releases(s) or Reconveyance(s) of Item(s): None
- (F) Other: None
- (G) You must give us the following information:
 - 1. Any off record leases, surveys, etc.
 - 2. Statement(s) of Identity, all parties.
 - 3. Other: None

The following additional requirements, as indicated by "X", must be met:

- (H) Provide information regarding any off-record matters, which may include, but are not limited to: leases, recent works of improvement, or commitment statements in effect under the Environmental Responsibility Acceptance Act, Civil Code Section 850, et seq.

The Company's Owner's Affidavit form (as provided by company) must be completed and submitted prior to close in order to satisfy this requirement. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.

- (I) An ALTA/ACSM survey of recent date, which complies with the current minimum standard detail requirements for ALTA/ACSM land title surveys, must be submitted to the Company for review. This Commitment will then be subject to such further exceptions and/or requirements as may be deemed necessary.
- (J) The following LLC documentation is required:
 - (i) a copy of the Articles of Organization
 - (ii) a copy of the Operating Agreement, if applicable
 - (iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
 - (iv) express Company Consent to the current transaction

- (K) The following partnership documentation is required :
 - (i) a copy of the partnership agreement, including all applicable amendments thereto
 - (ii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
 - (iii) express Partnership Consent to the current transaction

- (L) The following corporation documentation is required:
 - (i) a copy of the Articles of Incorporation
 - (ii) a copy of the Bylaws, including all applicable Amendments thereto
 - (iii) a Certificate of Good Standing and/or other evidence of current Authority to Conduct Business within the State
 - (iv) express Corporate Resolution consenting to the current transaction

- (M) Based upon the Company's review of that certain partnership/operating agreement dated **Not disclosed** for the proposed insured herein, the following requirements must be met:

Any further amendments to said agreement must be submitted to the Company, together with an affidavit from one of the general partners or members stating that it is a true copy, that said partnership or limited liability company is in full force and effect, and that there have been no further amendments to the agreement. This Commitment will then be subject to such further requirements as may be deemed necessary.

- (N) A copy of the complete lease, as referenced in Schedule A, #3 herein, together with any amendments and/or assignments thereto, must be submitted to the Company for review, along with an affidavit executed by the present lessee stating that it is a true copy, that the lease is in full force and effect, and that there have been no further amendments to the lease. This Commitment will then be subject to such further requirements as may be deemed necessary.

- (O) Approval from the Company's Underwriting Department must be obtained for issuance of the policy contemplated herein and any endorsements requested thereunder. This Commitment will then be subject to such further requirements as may be required to obtain such approval.

- (P) Potential additional requirements, if ALTA Extended coverage is contemplated hereunder, and work on the land has commenced prior to close, some or all of the following requirements, and any other requirements which may be deemed necessary, may need to be met:

- (Q) The Company's "Indemnity Agreement I" must be executed by the appropriate parties.

- (R) Financial statements from the appropriate parties must be submitted to the Company for review.

- (S) A copy of the construction contract must be submitted to the Company for review.

- (T) An inspection of the land must be performed by the Company for verification of the phase of construction.

- (U) The Company's "Mechanic's Lien Risk Addendum" form must be completed by a Company employee, based upon information furnished by the appropriate parties involved.

SCHEDULE B

SECTION TWO

EXCEPTIONS

Any policy we issue will have the following exceptions unless they are taken care of to our satisfaction. The printed exceptions and exclusions from the coverage of the policy or policies are set forth in Exhibit A attached. Copies of the policy forms should be read. They are available from the office which issued this Commitment.

1. General and special taxes and assessments for the fiscal year 2016-2017, a lien not yet due or payable.
2. General and special taxes and assessments for the fiscal year 2015-2016 are exempt. If the exempt status is terminated an additional tax may be levied. A.P. Nos.: 2466-011-907 and 2466-028-906.
3. The lien of supplemental taxes, if any, assessed pursuant to Chapter 3.5 commencing with Section 75 of the California Revenue and Taxation Code.
4. Water rights, claims or title to water, whether or not shown by the public records.

Document(s) declaring modifications thereof recorded October 18, 2011 as Instrument No. [20111407605](#) of Official Records.

20. Rights of parties in possession.

INFORMATIONAL NOTES

1. According to the latest available equalized assessment roll in the office of the county tax assessor, there is located on the land a Commercial Structure known as Burbank Airport Area, Burbank, California.
2. According to the public records, there has been no conveyance of the land within a period of twenty-four months prior to the date of this report, except as follows:

None
3. If this preliminary report/commitment was prepared based upon an application for a policy of title insurance that identified land by street address or assessor's parcel number only, it is the responsibility of the applicant to determine whether the land referred to herein is in fact the land that is to be described in the policy or policies to be issued.
4. We find no open deeds of trust. Escrow please confirm before closing.

The map attached, if any, may or may not be a survey of the land depicted hereon. First American Title Insurance Company expressly disclaims any liability for loss or damage which may result from reliance on this map except to the extent coverage for such loss or damage is expressly provided by the terms and provisions of the title insurance policy, if any, to which this map is attached.

******To obtain wire instructions for deposit of funds to your escrow file please contact your Escrow Officer.******

CONDITIONS

1. DEFINITIONS

(a) "Mortgage" means mortgage, deed of trust or other security instrument.

(b) "Public Records" means title records that give constructive notice of matters affecting the title according to the state law where the land is located.

2. LATER DEFECTS

The Exceptions in Schedule B - Section Two may be amended to show any defects, liens or encumbrances that appear for the first time in the public records or are created or attached between the Commitment Date and the date on which all of the Requirements (a) and (c) of Schedule B - Section One are met. We shall have no liability to you because of this amendment.

3. EXISTING DEFECTS

If any defects, liens or encumbrances existing at Commitment Date are not shown in Schedule B, we may amend Schedule B to show them. If we do amend Schedule B to show these defects, liens or encumbrances, we shall be liable to you according to Paragraph 4 below unless you knew of this information and did not tell us about it in writing.

4. LIMITATION OF OUR LIABILITY

Our only obligation is to issue to you the Policy referred to in this Commitment, when you have met its Requirements. If we have any liability to you for any loss you incur because of an error in this Commitment, our liability will be limited to your actual loss caused by your relying on this Commitment when you acted in good faith to:

comply with the Requirements shown in Schedule B - Section One

or

eliminate with our written consent any Exceptions shown in Schedule B - Section Two.

We shall not be liable for more than the Policy Amount shown in Schedule A of this Commitment and our liability is subject to the terms of the Policy form to be issued to you.

5. CLAIMS MUST BE BASED ON THIS COMMITMENT

Any claim, whether or not based on negligence, which you may have against us concerning the title to the land must be based on this commitment and is subject to its terms.

First American Title

Privacy Information We Are Committed to Safeguarding Customer Information

In order to better serve your needs now and in the future, we may ask you to provide us with certain information. We understand that you may be concerned about what we will do with such information - particularly any personal or financial information. We agree that you have a right to know how we will utilize the personal information you provide to us. Therefore, together with our subsidiaries we have adopted this Privacy Policy to govern the use and handling of your personal information.

Applicability

This Privacy Policy governs our use of the information that you provide to us. It does not govern the manner in which we may use information we have obtained from any other source, such as information obtained from a public record or from another person or entity. First American has also adopted broader guidelines that govern our use of personal information regardless of its source. First American calls these guidelines its Fair Information Values.

Types of Information

Depending upon which of our services you are utilizing, the types of nonpublic personal information that we may collect include:

- Information we receive from you on applications, forms and in other communications to us, whether in writing, in person, by telephone or any other means;
- Information about your transactions with us, our affiliated companies, or others; and
- Information we receive from a consumer reporting agency.

Use of Information

We request information from you for our own legitimate business purposes and not for the benefit of any nonaffiliated party. Therefore, we will not release your information to nonaffiliated parties except: (1) as necessary for us to provide the product or service you have requested of us; or (2) as permitted by law. We may, however, store such information indefinitely, including the period after which any customer relationship has ceased. Such information may be used for any internal purpose, such as quality control efforts or customer analysis. We may also provide all of the types of nonpublic personal information listed above to one or more of our affiliated companies. Such affiliated companies include financial service providers, such as title insurers, property and casualty insurers, and trust and investment advisory companies, or companies involved in real estate services, such as appraisal companies, home warranty companies and escrow companies. Furthermore, we may also provide all the information we collect, as described above, to companies that perform marketing services on our behalf, on behalf of our affiliated companies or to other financial institutions with whom we or our affiliated companies have joint marketing agreements.

Former Customers

Even if you are no longer our customer, our Privacy Policy will continue to apply to you.

Confidentiality and Security

We will use our best efforts to ensure that no unauthorized parties have access to any of your information. We restrict access to nonpublic personal information about you to those individuals and entities who need to know that information to provide products or services to you. We will use our best efforts to train and oversee our employees and agents to ensure that your information will be handled responsibly and in accordance with this Privacy Policy and First American's Fair Information Values. We currently maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

Information Obtained Through Our Web Site

First American Financial Corporation is sensitive to privacy issues on the Internet. We believe it is important you know how we treat the information about you we receive on the Internet. In general, you can visit First American or its affiliates' Web sites on the World Wide Web without telling us who you are or revealing any information about yourself. Our Web servers collect the domain names, not the e-mail addresses, of visitors. This information is aggregated to measure the number of visits, average time spent on the site, pages viewed and similar information. First American uses this information to measure the use of our site and to develop ideas to improve the content of our site. There are times, however, when we may need information from you, such as your name and email address. When information is needed, we will use our best efforts to let you know at the time of collection how we will use the personal information. Usually, the personal information we collect is used only by us to respond to your inquiry, process an order or allow you to access specific account/profile information. If you choose to share any personal information with us, we will only use it in accordance with the policies outlined above.

Business Relationships

First American Financial Corporation's site and its affiliates' sites may contain links to other Web sites. While we try to link only to sites that share our high standards and respect for privacy, we are not responsible for the content or the privacy practices employed by other sites.

Cookies

Some of First American's Web sites may make use of "cookie" technology to measure site activity and to customize information to your personal tastes. A cookie is an element of data that a Web site can send to your browser, which may then store the cookie on your hard drive. FirstAm.com uses stored cookies. The goal of this technology is to better serve you when visiting our site, save you time when you are here and to provide you with a more meaningful and productive Web site experience.

Fair Information Values

Fairness We consider consumer expectations about their privacy in all our businesses. We only offer products and services that assure a favorable balance between consumer benefits and consumer privacy.

Public Record We believe that an open public record creates significant value for society, enhances consumer choice and creates consumer opportunity. We actively support an open public record and emphasize its importance and contribution to our economy.

Use We believe we should behave responsibly when we use information about a consumer in our business. We will obey the laws governing the collection, use and dissemination of data.

Accuracy We will take reasonable steps to help assure the accuracy of the data we collect, use and disseminate. Where possible, we will take reasonable steps to correct inaccurate information. When, as with the public record, we cannot correct inaccurate information, we will take all reasonable steps to assist consumers in identifying the source of the erroneous data so that the consumer can secure the required corrections.

Education We endeavor to educate the users of our products and services, our employees and others in our industry about the importance of consumer privacy. We will instruct our employees on our fair information values and on the responsible collection and use of data. We will encourage others in our industry to collect and use information in a responsible manner.

Security We will maintain appropriate facilities and systems to protect against unauthorized access to and corruption of the data we maintain.

EXHIBIT A
LIST OF PRINTED EXCEPTIONS AND EXCLUSIONS (BY POLICY TYPE)

1. CALIFORNIA LAND TITLE ASSOCIATION STANDARD COVERAGE POLICY - 1990
SCHEDULE B

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records. Proceedings by a public agency which may result in taxes or assessments, or notice of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the public records.

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
(b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
(a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
(b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
(c) resulting in no loss or damage to the insured claimant;
(d) attaching or created subsequent to Date of Policy; or
(e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with applicable "doing business" laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by their policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

2. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY FORM B - 1970
SCHEDULE OF EXCLUSIONS FROM COVERAGE

1. Any law, ordinance or governmental regulation (including but not limited to building and zoning ordinances) restricting or regulating or prohibiting the occupancy, use or enjoyment of the land, or regulating the character, dimensions or location of any improvement now or hereafter erected on the land, or prohibiting a separation in ownership or a reduction in the dimensions of area of the land, or the effect of any violation of any such law, ordinance or governmental regulation.
2. Rights of eminent domain or governmental rights of police power unless notice of the exercise of such rights appears in the public records at Date of Policy.
3. Defects, liens, encumbrances, adverse claims, or other matters (a) created, suffered, assumed or agreed to by the insured claimant; (b) not known to the Company and not shown by the public records but known to the insured claimant either at Date of Policy or at the date such claimant acquired an estate or interest insured by this policy and not disclosed in writing by the insured claimant to the Company prior to the date such insured claimant became an insured hereunder; (c) resulting in no loss or damage to the insured claimant; (d) attaching or created subsequent to Date of Policy; or (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.

3. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY FORM B - 1970
WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 2 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage by reason of the matters shown in parts one and two following:

Part One

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material heretofore or hereafter furnished, imposed by law and not shown by the public records.

**4. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1970
WITH A.L.T.A. ENDORSEMENT FORM 1 COVERAGE
SCHEDULE OF EXCLUSIONS FROM COVERAGE**

1. Any law, ordinance or governmental regulation (including but not limited to building and zoning ordinances) restricting or regulating or prohibiting the occupancy, use or enjoyment of the land, or regulating the character, dimensions or location of any improvement now or hereafter erected on the land, or prohibiting a separation in ownership or a reduction in the dimensions or area of the land, or the effect of any violation of any such law ordinance or governmental regulation.
2. Rights of eminent domain or governmental rights of police power unless notice of the exercise of such rights appears in the public records at Date of Policy.
3. Defects, liens, encumbrances, adverse claims, or other matters (a) created, suffered, assumed or agreed to by the insured claimant, (b) not known to the Company and not shown by the public records but known to the insured claimant either at Date of Policy or at the date such claimant acquired an estate or interest insured by this policy or acquired the insured mortgage and not disclosed in writing by the insured claimant to the Company prior to the date such insured claimant became an insured hereunder, (c) resulting in no loss or damage to the insured claimant; (d) attaching or created subsequent to Date of Policy (except to the extent insurance is afforded herein as to any statutory lien for labor or material or to the extent insurance is afforded herein as to assessments for street improvements under construction or completed at Date of Policy).
4. Unenforceability of the lien of the insured mortgage because of failure of the insured at Date of Policy or of any subsequent owner of the indebtedness to comply with applicable "doing business" laws of the state in which the land is situated.

**5. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1970
WITH REGIONAL EXCEPTIONS**

When the American Land Title Association Lenders Policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy, the exclusions set forth in paragraph 4 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage by reason of the matters shown in parts one and two following:

Part One

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

**6. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1992
WITH A.L.T.A. ENDORSEMENT FORM 1 COVERAGE
EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy;
(b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims, or other matters:
 - (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
 - (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
 - (c) resulting in no loss or damage to the insured claimant;
 - (d) attaching or created subsequent to Date of Policy (except to the extent that this policy insures the priority of the lien of the insured mortgage over any statutory lien for services, labor or material or the extent insurance is afforded herein as to assessments for street improvements under construction or completed at date of policy); or
 - (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable "doing business" laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any statutory lien for services, labor or materials (or the claim of priority of any statutory lien for services, labor or materials over the lien of the insured mortgage) arising from an improvement or work related to the land which is contracted for and commenced subsequent to Date of Policy and is not financed in whole or in part by proceeds of the indebtedness secured by the insured mortgage which at Date of Policy the insured has advanced or is obligated to advance.
7. Any claim, which arises out of the transaction creating the interest of the mortgagee insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:
 - (i) the transaction creating the interest of the insured mortgagee being deemed a fraudulent conveyance or fraudulent transfer; or
 - (ii) the subordination of the interest of the insured mortgagee as a result of the application of the doctrine of equitable subordination; or
 - (iii) the transaction creating the interest of the insured mortgagee being deemed a preferential transfer except where the preferential transfer results from the failure:
 - (a) to timely record the instrument of transfer; or
 - (b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

**7. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 1992
WITH REGIONAL EXCEPTIONS**

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 6 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

**8. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 1992
EXCLUSIONS FROM COVERAGE**

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1.
 - (a) Any law, ordinance or governmental regulation (including but not limited to building and zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating to (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
 - (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or a notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims, or other matters:
 - (a) created, suffered, assumed or agreed to by the insured claimant;
 - (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
 - (c) resulting in no loss or damage to the insured claimant;
 - (d) attaching or created subsequent to Date of Policy; or

- (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the estate or interest insured by this policy.
4. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that is based on:
- (i) the transaction creating the estate or interest insured by this policy being deemed a fraudulent conveyance or fraudulent transfer; or
 - (ii) the transaction creating the estate or interest insured by this policy being deemed a preferential transfer except where the preferential transfer results from the failure:
 - (a) to timely record the instrument of transfer; or
 - (b) of such recordation to impart notice to a purchaser for value or a judgment or lien creditor.

**9. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 1992
WITH REGIONAL EXCEPTIONS**

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 8 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:
Part One:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of said land or by making inquiry of persons in possession thereof.
3. Easements, claims of easement or encumbrances which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by public records.
5. Unpatented mining claims; reservations or exceptions in patents or in Acts authorizing the issuance thereof; water rights, claims or title to water.
6. Any lien, or right to a lien, for services, labor or material theretofore or hereafter furnished, imposed by law and not shown by the public records.

**ALTA RESIDENTIAL TITLE INSURANCE POLICY (6-1-87)
EXCLUSIONS**

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes building and zoning ordinances and also laws and regulations concerning:
 - (a) and use
 - (b) improvements on the land
 - (c) and division
 - (d) environmental protection

This exclusion does not apply to violations or the enforcement of these matters which appear in the public records at Policy Date.

This exclusion does not limit the zoning coverage described in Items 12 and 13 of Covered Title Risks.

2. The right to take the land by condemning it, unless:
 - (a) a notice of exercising the right appears in the public records on the Policy Date
 - (b) the taking happened prior to the Policy Date and is binding on you if you bought the land without knowing of the taking
3. Title Risks:
 - (a) that are created, allowed, or agreed to by you
 - (b) that are known to you, but not to us, on the Policy Date -- unless they appeared in the public records
 - (c) that result in no loss to you
 - (d) that first affect your title after the Policy Date -- this does not limit the labor and material lien coverage in Item 8 of Covered Title Risks
4. Failure to pay value for your title.
5. Lack of a right:
 - (a) to any land outside the area specifically described and referred to in Item 3 of Schedule A OR
 - (b) in streets, alleys, or waterways that touch your land

This exclusion does not limit the access coverage in Item 5 of Covered Title Risks.

11. EAGLE PROTECTION OWNER'S POLICY

**CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE - 1998
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE - 1998**

Covered Risks 14 (Subdivision Law Violation). 15 (Building Permit). 16 (Zoning) and 18 (Encroachment of boundary walls or fences) are subject to Deductible Amounts and Maximum Dollar Limits of Liability

EXCLUSIONS

In addition to the Exceptions in Schedule B, you are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of any law or government regulation. This includes ordinances, laws and regulations concerning:
 - a. building
 - b. zoning
 - c. land use
 - d. improvements on the land
 - e. land division
 - f. environmental protection

This exclusion does not apply to violations or the enforcement of these matters if notice of the violation or enforcement appears in the Public Records at the Policy Date.
This exclusion does not limit the coverage described in Covered Risk 14, 15, 16, 17 or 24.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not apply to violations of building codes if notice of the violation appears in the Public Records at the Policy Date.
3. The right to take the Land by condemning it, unless:
 - a. a notice of exercising the right appears in the Public Records at the Policy Date; or
 - b. the taking happened before the Policy Date and is binding on You if You bought the Land without Knowing of the taking.
4. Risks:
 - a. that are created, allowed, or agreed to by You, whether or not they appear in the Public Records;
 - b. that are Known to You at the Policy Date, but not to Us, unless they appear in the Public Records at the Policy Date;
 - c. that result in no loss to You; or
 - d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.d, 22, 23, 24 or 25.
5. Failure to pay value for Your Title.
6. Lack of a right:
 - a. to any Land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
 - b. in streets, alleys, or waterways that touch the Land.

This exclusion does not limit the coverage described in Covered Risk 11 or 18.

12. THIRD GENERATION EAGLE LOAN POLICY AMERICAN LAND TITLE ASSOCIATION EXPANDED COVERAGE RESIDENTIAL LOAN POLICY (1/01/08)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to (i) the occupancy, use, or enjoyment of the Land; (ii) the character, dimensions, or location of any improvement erected on the Land; (iii) the subdivision of land; or (iv) environmental protection; or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
(b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
 - (e) resulting in loss or damage which would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.

13. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 2006 EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or

expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection;or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13, or 14); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
 - (a) a fraudulent conveyance or fraudulent transfer, or
 - (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

14. AMERICAN LAND TITLE ASSOCIATION LOAN POLICY - 2006 WITH REGIONAL EXCEPTIONS

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 13 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

15. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 2006 EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
 - (i) the occupancy, use, or enjoyment of the Land;
 - (ii) the character, dimensions, or location of any improvement erected on the Land;
 - (iii) the subdivision of land; or
 - (iv) environmental protection; or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.

- (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
 - (a) created, suffered, assumed, or agreed to by the Insured Claimant;
 - (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
 - (c) resulting in no loss or damage to the Insured Claimant;
 - (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risks 9 and 10); or
 - (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors rights laws, that the transaction vesting the Title as shown in Schedule A, is
 - (a) a fraudulent conveyance or fraudulent transfer; or
 - (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

**16. AMERICAN LAND TITLE ASSOCIATION OWNER'S POLICY - 2006
WITH REGIONAL EXCEPTIONS**

When the American Land Title Association policy is used as a Standard Coverage Policy and not as an Extended Coverage Policy the exclusions set forth in paragraph 15 above are used and the following exceptions to coverage appear in the policy.

SCHEDULE B

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/30/2015 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	36

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	36

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERCLIS-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 4 CERCLIS-NFRAP sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ALUMTREAT	2905 WINONA ST.	SE 1/2 - 1 (0.694 mi.)	079	274

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 09/10/2015 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	36

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 09/10/2015 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/07/2015 has revealed that there are 17 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 12/14/2015 has revealed that there are 8 LUST sites within approximately 0.5 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SAN FERNANDO VALLEY	NORTH HOLLYWOOD WELL	0 - 1/8 (0.000 mi.)	0	36

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are

EXECUTIVE SUMMARY

2 SWEEPS UST sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal (October 15, 1984): San Fernando Valley Area I) is an area of contaminated ground water in the vicinity of the North Hollywood section of the City of Los Angeles, Los Angeles County, California. This area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,156 acres, contains trichloroethylene (TCE) and perchloroethylene (PCE), and to a lesser extent, carbon tetrachloride and chloroform, according to analyses conducted by the California Department of Health Services, as well as numerous local government agencies. The State's recommended drinking water guideline for TCE and PCE (5 and 4 parts per billion respectively) are exceeded in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with TCE/PCE concentrations below the State's guidelines. Status (June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.

Site Description: The North Hollywood-Burbank Well Field is located within the North Hollywood National Priorities List (NPL) Site, which is one of four NPL sites in the San Fernando Valley. It is also located in the San Fernando Valley Groundwater Basin. The sites were proposed for inclusion on the NPL because of the discovery of trichloroethylene and other volatile organic contaminants (VOCs) in the groundwater. The San Fernando Valley Groundwater Basin comprises 112,000 acres of valley fill situated among the Coastal Ranges within the Los Angeles metropolitan area. The area is used for residential, commercial, and industrial purposes. Groundwater from the basin is distributed by various municipalities and water districts to the residents of the metropolitan area. The Los Angeles Department of Water and Power (DWP) operates the North Hollywood-Burbank Well Field to provide drinking water to the residents of the City of Los Angeles, located to the south of the San Fernando Valley. The San Fernando Groundwater Basin can provide drinking water for approximately 500,000 people residing in the San Fernando Valley and Los Angeles. In times of water shortages, the groundwater shortage can be drawn upon to supply about one million people. It is also an important source of water for the Cities of Burbank, Glendale, and San Fernando. The North Hollywood Operable Unit (NHO) is one of two geographically-defined operable units within the San Fernando Valley (SFV) (Area 1) Superfund Site. The NHO comprises approximately

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

4 square miles of contaminated groundwater underlying an area of mixed industrial, commercial, and residential land use in the community of North Hollywood (a district of the City of Los Angeles). The NHOU is approximately 15 miles north of downtown Los Angeles and immediately west of the City of Burbank, and has approximate Site boundaries of Sun Valley and Interstate 5 to the north, State Highway 170 and Lankershim Boulevard to the west, the Burbank Airport to the east, and Burbank Boulevard to the south. The EPA is the lead agency for the current and planned future groundwater remedial activities at the NHOU. The EPA's response activities at the NHOU are and have been conducted under the authority established in the federal Superfund law, the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, 42 U.S.C. Section 9601 et seq. The lead state agency is the California Department of Toxic Substances Control (DTSC). The Los Angeles Regional Water Quality Control Board (RWQCB) has provided and continues to provide substantial support, particularly with the investigation and cleanup of sources of contamination in the SFV. The expected source of cleanup monies for the NHOU is an enforcement settlement with the Potentially Responsible Parties (PRPs). Prior to World War II, most land in the SFV was occupied by farms, orchards, and ranchland. By 1949, after the war, nearly all the land in Burbank and North Hollywood was occupied by housing developments, industrial facilities, retail establishments, and the Burbank Airport. Accompanying these land use changes in the 1940s was a substantial increase in population and groundwater withdrawals from the SFV. In the 1950s, the North Hollywood, Erwin, Whitnall, and Verdugo Well Fields were constructed by the Los Angeles Department of Water and Power (LADWP) in the North Hollywood area to meet the increasing demand for water. In 1968, groundwater withdrawals from the SFV were reduced to achieve "safe yield" from the basin, and more surface water was imported to the basin from external sources. In 1979, industrial contamination was found in groundwater in the San Gabriel Valley (to the east of the SFV), prompting the California Department of Public Health (CDPH; formerly the California Department of Health Services) to request that all major water providers in the region, including those in the SFV, sample and analyze groundwater for potential industrial contaminants. Trichloroethylene (TCE) and tetrachloroethylene (PCE) were consistently detected in a large number of production wells in the SFV at concentrations greater than Federal and State Maximum Contaminant Levels (MCLs) for drinking water. TCE and PCE were widely used in the San Fernando Valley starting in the 1940s for dry cleaning and for degreasing machinery. Disposal was not well regulated at that time, and releases volatile organic compound (VOC)-contaminated groundwater that extends from the NHOU to the southeast. To replace wells within the NHOU area contaminated by TCE and PCE, and to provide more operational flexibility for groundwater recharge and pumping in the SFV, LADWP constructed the Rinaldi-Toluca Well Field in 1988 and 1989, and the Tujung Well Field in 1993. Based on the significant levels of groundwater contamination present in the SFV and the impact of that contamination on numerous municipal water supply wells, EPA added four SFV Sites to the National Priorities List (NPL) in 1986 and defined them as areas of regional groundwater contamination. Three of the four Sites (Areas 1, 2 and 4) are contiguous areas within whose boundaries are well fields that serve the water supply systems for the cities of Los Angeles, Burbank and Glendale. There is a large, continuous plume of groundwater contamination that runs through these three Sites. The fourth Site, Area 3, lies in the Verdugo basin, a geographically separate area of the eastern San Fernando Valley. In the SFV Area 1 Site, located at the upgradient end of the contaminated groundwater plume, the selection and implementation of the initial interim remedy - the Existing NHOU Extraction and Treatment System - for the LADWP's North Hollywood well field was given fast-track status because of the potential for contamination to spread to other well fields and areas of

uncontaminated groundwater. In 1986, LADWP completed the Operable Unit Feasibility Study for the North Hollywood Well Field Area of the North Hollywood-Burbank NPL Site, which was the basis for selection and implementation of the Existing NHOU Extraction and Treatment System. The 1987 Record of Decision (ROD) for the Site selected the Existing NHOU Extraction and Treatment System as an interim groundwater containment remedy. In 1989, LADWP constructed the Existing NHOU Extraction and Treatment System with financial support from EPA. The Existing NHOU Extraction and Treatment System consists of eight groundwater extraction wells (NHE-1 through NHE-8), an air-stripping treatment system to remove VOCs from the extracted groundwater, activated carbon filters to remove VOCs from the air stream, and ancillary equipment. The treated groundwater is discharged into an LADWP blending facility where it is combined with water from other sources before entering the LADWP water supply system. The Existing NHOU Extraction and Treatment System commenced operation in December 1989 and remains in operation today. In 1989, EPA issued a ROD for the Burbank OU (BOU) of the SFV Area 1 Site. That ROD also selected an interim remedy (containment) for the VOC-contaminated groundwater within the Burbank area, where ten of the city's water supply wells had been shut down due to contamination. The BOU remedy, which provides treated water for the City of Burbank's water supply system, began operation in 1996 and remains in operation to this day. OU01 1991 ESD: In June 1986, the United States Environmental Protection Agency (EPA) evaluated the threat posed by a number of well fields within the San Fernando and Verdugo Groundwater Basins, and designated them as National Priorities List (NPL) hazardous substance sites. Industrial chemicals had been detected in groundwater from these areas. Although four sites in the basin were listed on the NPL, EPA and DWP are managing the investigation of the four sites and the adjacent area as a single project consistent with the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) Section 104(d)(4). The San Fernando Valley Groundwater Basin (SFVGB) has historically been, and continues to be, an important source of drinking water for the Los Angeles metropolitan area, including the unincorporated area of La Crescenta, and the cities of Burbank, Glendale, and San Fernando. The groundwater basin provides these communities with enough water to serve approximately 600,000 residents. Groundwater from the SFVGB is used for residential, commercial, and industrial purposes, and is especially important during years of drought. The groundwater that has become contaminated is difficult to replace. The current water supply from surface water may not always be available in the future because of periodic drought conditions and state and federal water rights issues. The Burbank Operable Unit (OU) was developed to address the areal extent of groundwater contamination that is presently generally located in the area of the Burbank Well Field and including any areas to which the groundwater contamination migrates. The Site is part of the SFV Area 1 (North Hollywood) NPL site and includes an area beyond that originally designated as SFV Area 1. The City of Burbank's production wells have been shut down because the water they produce contained trichloroethylene (TCE) and perchloroethylene (PCE) in concentrations exceeding state and federal maximum contaminant levels (MCLs). Consequently, the City of Burbank now purchases 100 percent of its water, which is imported supply, from the Metropolitan Water District of Southern California (MWD). On June 30, 1989, the U.S. Environmental Protection Agency (EPA) signed a Record of Decision (ROD) for the San Fernando Valley (SFV) Area 1 - Burbank Operable Unit (Burbank OU). The Burbank OU is the second OU, but is named OU03 at the SFV Area 1 NPL site. The purpose of this Explanation of Significant Differences (ESD) is to explain the significant differences between the interim remedial action originally selected in the 1989 ROD and the interim remedy which will be implemented at the Site. EPA is issuing this ESD in order to take into account technical data received after

MAP FINDINGS

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

the ROD was signed in June of 1989 and to clarify any ambiguities regarding the selected remedy. An Explanation of Significant Differences addressing OU01 the San Fernando Site was completed in November, 1990. Operable Unit 3: The following gives a brief background of the Burbank Operable unit (OU) and a short summary of the remedy selected in the Record of Decision (ROD) and modified by Explanation of Significant Differences (ESD) 1. Further background information can be found in the ROD (dated June 30, 1989), and in ESD1 (dated November 20, 1990), as well as in other documents in the Burbank OU Administrative Record. In June 1986, the U.S. Environmental Protection Agency (EPA) evaluated the threat posed by groundwater contamination at a number of water supply wellfields within the San Fernando Valley and Verdugo groundwater basins. The chief contaminants of concern are trichloroethylene (TCE) and perchloroethylene (PCE). As a result of its investigation, EPA designated four wellfield areas as National Priorities List (NPL) sites. EPA is managing the four sites as a single project consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Section 104(d)(4). The San Fernando Valley Groundwater Basin has historically been an important source of drinking water for the Los Angeles metropolitan area, including the City of Burbank. The groundwater basin provides enough water to serve approximately 600,000 residents. Groundwater extracted from the basin is especially important during years of drought. Due to contamination by volatile organic chemicals (VOC), including TCE and PCE, beneficial use of the groundwater resource has been partially lost. Surface water supplies have replaced the lost resource, but are costly, and may not be available in the future due to periodic drought conditions and the potential for changing water rights policy. The Burbank OU is located within the San Fernando Valley groundwater basin and encompasses wellfields which were operated by the City of Burbank prior to being shut down as a result of contamination. The Burbank OU was specifically developed to address this areal extent of groundwater contamination. The City of Burbank's production wells have been shut down since the early 1980s because of the presence of TCE and PCE in concentrations exceeding federal and state Maximum Contaminant Levels (MCL). Consequently, the city purchases close to one hundred percent of its water from the Metropolitan Water District of Southern California, which supplies surface water imported from outside the San Fernando basin. (The city does operate a granular activated carbon groundwater extraction and treatment plant during parts of the year, but the contribution of this plant toward meeting the overall water demand is small). On June 30, 1989, EPA signed a Record of Decision (ROD) for the San Fernando Valley Area 1 Superfund Site, Burbank Operable Unit OU. On November 21, 1990, EPA signed an Explanation of Significant Differences (ESD1) modifying the interim remedial action selected in the ROD. A second ESD addressing the Burbank Operable Unit (Operable Unit 3) at the San Fernando Valley (Area 1) site was completed in February 1997. In December 1992, a remedial investigation (RI) for the SFV groundwater basin, including installation and subsequent regular monitoring of 84 groundwater wells, was completed under a cooperative agreement between EPA and the LADWP. The RI was conducted to evaluate the groundwater quality throughout the SFV basin and assist in identifying the best treatment method(s) and optimal locations to install groundwater treatment systems to address the SFV groundwater contamination. EPA listed the SFV Sites as groundwater only, with the intent to focus on addressing the regional groundwater contamination, with an agreement with the state agencies to address the sources. From the late 1980s to late 1990s, EPA provided funds to RWQCB to conduct assessments of facilities in the SFV to determine the extent of solvent usage and to assess past and current chemical handling, storage, and disposal practices. These investigations were conducted pursuant to RWQCB's Well Investigation Program and resulted in source remediation activities under RWQCB oversight at several

MAP FINDINGS

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

facilities within the SFV, including two within the NHOU. Source investigations and remediation activities are currently in progress under the lead of RWQCB and DTSC. In 1993, 1998, 2003, and 2008, EPA conducted five-year reviews (as required by CERCLA) to evaluate the protectiveness of the NHOU interim remedy. The Third NHOU Five-Year Review reported that the TCE and PCE groundwater plume that the remedy was designed to capture was migrating vertically and laterally beyond the remedy's zone of hydraulic control. This conclusion was based largely on EPA's evaluation of the current NHOU groundwater conditions and LADWP findings in the Draft Evaluation of the North Hollywood Operable Unit and Options to Enhance Its Effectiveness. The Final Evaluation of the North Hollywood Operable Unit and Options to Enhance Its Effectiveness also raised concerns regarding detections of total chromium and hexavalent chromium in extraction well NHE-2 of the NHOU interim remedy. Well NHE-2 is located just a short distance from the former Bendix facility, one of the major VOC sources in the NHOU. In July 2006, after a year of unusually high rainfall and rising groundwater levels in the SFV, the total chromium concentration detected at NHOU extraction well NHE-2 began to increase. Chromium was used in the metal plating and aerospace industry (metal fabrication), as well as for corrosion inhibition in industrial cooling towers, from the 1940s through the 1980s. It was also used extensively at the former Bendix facility. In 2007, the elevated concentrations of chromium at well NHE-2 caused total chromium concentrations in the combined NHOU treatment system effluent to exceed 30 micrograms per liter (ug/L) (60 percent of the state MCL). As a result, CDPH advised LADWP to shut down well NHE-2 or divert the water produced by the well to a nonpotable use. Chromium concentrations at this well have subsequently ranged from approximately 280 to 440 ug/L. In addition, 1, 4-dioxane was detected at well NHE-2 during 2007 and 2008 at concentrations ranging from 4 to 7 ug/L. There is no MCL for 1, 4-dioxane, but the CDPH notification level for 1, 4-dioxane is 3 ug/L. Extraction well NHE-2 remained shut down until September 2008, when the installation of a wellhead VOC treatment unit and modification of the discharge piping were completed, which allowed this well to return to service. The NHE-2 effluent, which still contains elevated levels of chromium, is currently discharged to the Los Angeles Bureau of Sanitation sewer system. This work was conducted by Honeywell International (a corporate successor to Bendix) as an interim measure, pursuant to a Cleanup and Abatement Order (CAO) from RWQCB that requires Honeywell to clean up the chromium contamination and to restore lost water caused by the shut down of well NHE-2. A long-term wellhead treatment system for well NHE-2, including treatment for chromium and, if necessary, 1,4-dioxane, to meet drinking water standards is expected to be implemented pursuant to the RWQCB CAO prior to the implementation of the NHOU Second Interim Remedy. Following construction and start up of the Existing NHOU Extraction and Treatment System, EPA issued general and special notice letters to PRPs. In 1996 and 1997, EPA reached two separate settlements with PRPs in which the settling parties agreed to pay EPA's past costs and fund operation of the Existing NHOU Extraction and Treatment System for the remainder of its fifteen-year term. In 2008, when the funds collected pursuant to the 1996 and 1997 settlements were close to being exhausted, EPA entered into an administrative order on consent with a number of parties from 1996 and 1997 settlements and issued a unilateral administrative order to the remaining viable parties in order to secure funding to continue operating the Existing NHOU Extraction and Treatment System until the Second Interim Remedy is constructed and operational. In preparation for the selection and implementation of the Second Interim Remedy, EPA has conducted additional PRP search activity. The RWQCB has issued CAOs to two parties in the NHOU. In December 1987, Lockheed was issued a CAO directing it to remediate contaminated soil and groundwater at Plant B-1 (in the BOU) and to complete a comprehensive Site assessment at all of Lockheed's other Burbank Airport

facilities, including Plants B5 and C1 (in the NHOU), to determine the sources and extent of soil and groundwater contamination. The RWQCB issued a CAO in February 2003 to Honeywell International, Inc., for VOC and chromium contamination in groundwater at the former Bendix facility in North Hollywood. This CAO was amended in April 2007 to include investigation and mitigation of emerging contaminants at the former Bendix facility and to address elevated chromium concentrations at NHOU extraction well NHE-2. The land use in the SFV Area 1 Site, including the NHOU, consists of mixed residential, industrial, and commercial use. The SFV is fully developed and land uses in the NHOU are not expected to change significantly in the next 20 years or longer. The SFV groundwater basin is an important source of drinking water for the Los Angeles metropolitan area, including the cities of Los Angeles, Glendale, Burbank, and San Fernando. The SFV is located in the Upper Los Angeles River Area (ULARA), which is under adjudicated water rights regulated by the ULARA Watermaster. Through court action in 1975, the City of Los Angeles was granted rights to all groundwater in the San Fernando Basin that is derived from precipitation within ULARA. There are a number of production well fields in the eastern SFV, including six LADWP well fields located in or near the NHOU. The output from the existing NHOU remedy accounts for approximately 1 to 2 percent of LADWP's total extraction from the SFV groundwater basin. The need for drinking water development in the eastern SFV, including the NHOU, is expected to increase over the next 20 years as restrictions on importing water to Southern California increase and imported water becomes more expensive. An Interim ROD addressing Operable Unit 4 was completed in September 2009.

Completed Document Type: Consent Order
Completed Date: 05/14/1997
Comments: The second partial consent decree to recover DTSC's past cost is signed on May 14, 1997. This also concludes the litigation for the interim remedy at the North Hollywood OU.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Consent Order
Completed Date: 08/01/1996
Comments: The first partial consent decree is entered by the Federal District court on August 1, 1996.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 08/17/1998
Comments: A second 5-year review of remedial activities is conducted at the North Hollywood OU (NHOU) and covers operations from 1993 thru 1997. The purpose was to evaluate whether the NH Interim Remedy achieved the objectives specified in the ROD. The findings of the 5-year review are that the objectives of the ROD have been met.

The SFGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains. The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are: Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divided into the North Hollywood Operable Unit(OU) and the Burbank OU. Area #2 - Crystal Springs NPL Site covers 3975 acres located southeast of the North Hollywood NPL site and is in the cities of Glendale and Los Angeles. Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the SF Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains.</p>
--	--

SAN FERNANDO VALLEY (AREA 1) (Continued)

1000709322

Area #4 - the Pollock NPL Site covers 1635 acres in the south-eastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale.

Groundwater contamination in the SFVGWB is linked to prewar, postwar, and current industrialization in the San Fernando Valley.

The primary contaminants of concern are the volatile organic compounds (VOCs) trichloroethylene (TCE) and tetrachloroethylene (PCE). These compounds have been and/or are being used in many San Fernando Valley industries, such as aeronautical, automotive dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGWB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater contamination in numerous wells have been so severe with TCE and PCE that these wells have essentially been put out of commission. Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOC vapors released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigations and cleanup of contaminated groundwater in the San Fernando Valley since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing and implementing cleanup remedies, and identifying responsible parties. EPA provided oversight of the basinwide Remedial Investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, hydrogeology and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate and transport of compounds in the environment; identify Applicable or Relevant and Appropriate Requirements; (ARAR's) and evaluate the potential risk to human health and the environment. The Remedial Investigation of the SFVGWB was divided into two phases.

Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contamination information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4).

Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.

Phase II activities consist of a basinwide remedial

investigation conducted by the LADWP.

Remedial Actions (RAs):

North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.

A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.

A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Phase I of the Burbank OU began operations in January 1996 treating groundwater at a rate of 6,000 gpm. Phase II began operations in May 1998 adding an additional 3,000 gpm to the Burbank OU's treatment capacity.

Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU has been separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remedy. The PRPs have formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW extraction and treatment. The Glendale OU began operations in September 2000.

Verdugo and Pollock (Areas #3 and #4) --

Currently no RAs have been identified for Area #3 or for Area #4.

In October 2003 US EPA proposed No Remedial Action for Verdugo Basin (Area #3).

Another contaminant of concern, hexavalent chromium, has been identified in the San Fernando Valley Groundwater Basin.

EPA and the RWQCB are currently identifying potential sources of contamination and pursuing PRPs that may be responsible for contaminating groundwater. As these PRPs are identified, individual site investigations and mitigation activities will be pursued. Enforceable agreements and orders will be implemented at numerous specific potential source sites within the Basin by RWQCB and DTSC

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HYDRA-ELECTRIC CO. (Continued)

S104827495

Facility Status: Industrial, Agricultural or Solid Waste (Class I, II or III)
Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.

NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Subregion: 4

Facility Telephone: 8188431209

Facility Contact: Ed Little

Agency Name: HYDRA-ELECTRIC CO.

Agency Address: Not reported

Agency City,St,Zip: 0

Agency Contact: Not reported

Agency Telephone: Not reported

Agency Type: Private

SIC Code: 3643

SIC Code 2: Not reported

Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Primary Waste: STORMS

Waste Type2: Not reported

Waste2: Stormwater Runoff

Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Secondary Waste: Not reported

Secondary Waste Type: Not reported

Design Flow: 0

Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Case Type: Cleanup Program Site
Case Worker: LR
Local Agency: Not reported
RB Case Number: 104.0150
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: Chromium VI
Site History: The Site was formerly occupied by Aviall, Inc. (Aviall), which conducted metal finishing operations as a function of its aviation manufacturing processes. The Site was investigated, by the Regional Board, for total petroleum hydrocarbons, VOCs and heavy metals. In May 1992, a Well Investigation Program Phase II Report (Phase II Report) was submitted to the Regional Board by SCS Engineers, describing the results of a soil investigation conducted at the Site. The Phase II Report confirmed a release of heavy metals at the location of the former plating shop and limited soil excavation and removal was performed. Site assessment conducted in 2014 and 2015, reported detectable concentrations of hexavalent chromium in soils, groundwater samples analyzed reported non-detect for hexavalent chromium.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Potential Media Affected: Aquifer used for drinking water supply
 Potential Contaminants of Concern: Not reported
 Site History:

The Site was included as part of the US EPA Superfund investigation on VOC impacted areas in San Fernando Valley. The investigation was concluded jointly by USEPA and LARQWCB, on December 31, 1996, that the Image Transform Laboratory is No longer part of the USEPA Superfund process, and USEPA and Regional Board plan no further action concerning the facility. The closure was granted with respect to the VOC investigation conducted under the Well Investigation Program (WIP) during that time. The case was a WIP case only, and never was an open SLIC Case under the Regional Board's oversight.

Reclamation: Not reported
 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Longitude: -118.342387676239
Case Type: Cleanup Program Site
Case Worker: EHW
Local Agency: Not reported
RB Case Number: 104.1132
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Dioxin / Furans, Chromium, Mercury (elemental), Other Metal
Site History: As of the end of 2008, site had completed onsite assessment work. A "draft" CAO was being developed by Regional Board staff that would've included a requirement for the discharger to develop and submit a Remedial Action Plan. Regional Board oversight was placed on hold, because discharger filed for Chapter 11 Bankruptcy. Presently, the bankruptcy proceedings are being completed. If insufficient funds are available based on the bankruptcy proceedings, then the lead regulatory oversight may be transferred to the USEPA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Reclamation: Not reported
 POTW: Not reported
 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Corrective Action Summary:

Event date: 11/05/1992
Event: CA029EP

Event date: 11/05/1992
Event: RFA Completed, Assessment was a PA-Plus.

Event date: 11/05/1992
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 01/01/1997
Event: Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Facility Has Received Notices of Violations:

Regulation violated: Not reported
Area of violation: TSD - Container Use and Management
Date violation determined: 09/21/1994
Date achieved compliance: 01/01/1995
Violation lead agency: State
Enforcement action: WRITTEN INFORMAL

Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 03/26/2012
Comments: 3/22/2012, DTSC's PM visited the site, and performed walk through of the site with Mr. Sergik Avakian representing the American Best Engineering, the current operator at the site. It was observed that the restricted area as defined by the LUC is in full compliance with the stipulated terms in the LUC. Mr. Avakian mentioned that he is renting/lease the site from a new owner. On 3/26/2012 DTSC's PM contacted Mr Richard Fond, and was confirmed Mr Fond sold the property on March 2012. DTSC's PM requested Mr Fond to advise DTSC regarding the particulars on the ownership transfer as required by the LUC, Mr. Fond will respond to the request.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 22245.9

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 208.5

Waste code: D006

Waste name: CADMIUM

Amount (Lbs): 12149.9

Waste code: D007

Waste name: CHROMIUM

Relative: CA BOND EXP. PLAN:
Lower Responsible Party: RWQCB REFERRAL SITE
 Project Revenue Source Company: Not reported
Actual: Project Revenue Source Addr: Not reported
679 ft. Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: The PRP is providing for the remediation of the site under RWQCB lead and will pay all costs associated with site cleanup. There are no current plans for expenditure of Bond funds for the site.

 Site Description: The site is the location of an aircraft manufacturing facility constructed in the late 1930's and early 1940's. Operational activities include aircraft research, manufacturing and maintenance. Hazardous materials which are used at the facility include plating solutions, acids, fuels, and solvents.

 Hazardous Waste Desc: The facility overlies the San Fernando Valley Ground Water Basin. Analysis of monitoring wells on the facility and downgradient has revealed contamination of the ground water by perchloroethylene (PCE) and trichloroethylene (TCE). Concentrations of PCE vary from approximately 20 to 12,000 parts per billion (ppb) and from approximately 20 to 1,600 ppb for TCE. Other compounds detected at low levels are acetone, chloroform, methyl ethyl ketone, chlorobenzene, ethylbenzene, and benzene.

 Threat To Public Health & Env: The contaminated aquifer is a major source of drinking water for the city. Wells downgradient have been shut down due to contamination from this or other sources. If the contamination migrates further offsite, additional wells may become contaminated, thus leading to a reduction in water quality and potential long-term loss of water supply.

 Site Activity Status: The potentially responsible party (PRP) has installed ground water monitoring wells and is currently working under the direction of the Regional Water Quality Control Board to determine the nature and extent of the contamination.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 11/07/2015	Source: Department of Toxic Substances Control

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/12/2015

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

APPENDIX F

RESUMES

RESUME OF KASIA EDLUND *Senior Staff Geologist*

EDUCATION

Bachelor of Science, Environmental Geology, 2012, University of California, Santa Cruz

EMPLOYMENT HISTORY

2013-2014 – Alpha Environmental (environmental consulting)

2015-present – Ardent Environmental Group, Inc. (environmental consulting)

PROFESSIONAL EXPERIENCE AND RESPONSIBILITIES

Ms. Edlund has a strong background in geology, geography, chemistry and physics which provides support in completing a variety of field and office tasks during environmental assessments, site characterization, and remediation projects. Tasks include development of work plans, collection of field data, sampling of groundwater wells, sample collection, underground storage tank removal, research and review of regulatory records and historical land use records, data evaluation, and technical report preparation. Ms. Edlund's project experience includes:

- **Groundwater Monitoring:** Perform groundwater monitoring activities. Depth to groundwater is measured with electric sounders before sampling. Wells are purged of static groundwater using submersible pumps and hand bailers. Groundwater is collected from monitoring wells and sent to a laboratory for analyses on a quarterly basis to determine the effectiveness of remedial actions at the properties. Quarterly monitoring reports are prepared and are uploaded to the State's GeoTracker website.
- **Phase I Environmental Site Assessment:** Staff Geologist for Phase I Environmental Site Assessment reports throughout Southern California. Report preparation includes site reconnaissance activities involving visual site inspection, research and review of regulatory records and historical land use records, and identification of potential environmental concerns and/or impacts to the site.
- **Phase II Site Characterization:** Staff Geologist for several projects involving the advancement of soil borings by direct-push methods to assess the nature and extent of soil contamination via sample collection and analyses. These duties also include conducting soil gas surveys to assess vapor concentrations of methane gas and/or volatile organic compounds for exposition hazards and human health risks. This involves the installation of soil vapor monitoring points, purging stagnant air, and collecting vapor samples in Summa canisters for analysis by a stationary laboratory. Installation and sampling were conducted in accordance with current Department of Toxic Substances Control (DTSC) guidelines.
- **Underground Storage Tank Closure:** Staff Geologist directing subcontractors in the removal of a number of fuel underground storage tanks throughout California. Tasks involved obtaining permits, coordinating regulatory inspectors and subcontractors, directing field excavation, sample collection, and preparation of a closure report for submittal to the relevant oversight agency.

RESUME OF PAUL A. ROBERTS

Principal Geologist

EDUCATION

Bachelor of Science, Geology, 1987, California State University, Fullerton, California

REGISTRATION AND CERTIFICATIONS

Professional Geologist, California PG 6897

Registered Geologist, Arizona RG 42445

Ventura County Well Inspector

OSHA 40-Hour Health and Safety Training (with annual updates)

OSHA 8-Hour Health and Safety Supervisor Training

EMPLOYMENT HISTORY

1986-1996 – Applied Geosciences Inc. (environmental consulting)

1996-1998 – ATC Associates (environmental consulting)

1998-2007 – Ninyo & Moore (environmental consulting)

2007-present – Ardent Environmental Group, Inc. (environmental consulting)

PROFESSIONAL EXPERIENCE AND RESPONSIBILITIES

As a Principal Geologist for Ardent Environmental Group, Inc., Mr. Roberts coordinates geotechnical and geologic field evaluations and supervises field technicians and staff- and project-level geologists and engineers, reviews historical stereoscopic aerial photographs, fire insurance maps, and other historical documentation to assess the location and possible environmental affects of former features on subject properties, interacts with clients, attorneys, and agency representatives. Mr. Roberts also performs geologic and hydrogeological research and performs detailed logging and sampling of trenches, and large- and small-diameter borings. Mr. Roberts is very familiar with mud- and air-rotary, sonic, direct-push, and hollow stem auger drilling technics. Mr. Roberts interprets geophysical data to evaluate the possible presence of covered underground features such as underground storage tanks, clarifiers, sumps, and wells which may have had an environmental impact on subject properties, writes and reviews geologic reports work plans, Phase I Environmental Site Assessments, risk assessments, subsurface investigation reports, monitoring reports, feasibility studies, and remediation reports.

- **Former Chemical Plant, Santa Fe Springs:** Principal Geologist retained to log and sample deep borings for the installation of groundwater wells used to characterize the vertical and lateral extent of volatile organic compound (VOC) impacted groundwater. Sonic, mud-rotary, and hollow stem auger drilling methods were used to drill borings to depths of up to 400 feet below the ground surface (bgs).
- **Port of Los Angeles:** Project Geologist managing several environmental projects for the Port of Los Angeles (POLA) under an on-call contract. Project Geologist interacting with POLA personnel regarding environmental issues associated with land purchases, tenant

RESUME OF PAUL A. ROBERTS
Principal Geologist

audits, and on-call remediation. Projects have involved removal of underground storage tanks at the Yang Ming Terminal and continued groundwater monitoring, and the implementation of a corrosion study at a potential automobile storage yard in the Port of Los Angeles.

- **Alameda Corridor Transportation Authority:** Project Geologist managing numerous environmental projects under an on-call remediation services contract. Projects have involved remediation of petroleum pipelines and impacted soil discovered during construction activities of the Alameda Corridor. One project involved dredging metal-impacted soil from the Port of Los Angeles, where Mr. Roberts acted as the liaison between POLA and ACTA representatives.
- **Riverside County Transportation Commission (RCTC):** Project manager for several projects for RCTC including a Phase I Environmental Site Assessment (ESAs) of the AT&SF ROW from mile post 26.93 to MP 38.2 along the San Jacinto subdivision in Riverside County, California; and Phase I ESAs and assessment and remediation of contaminated soil at proposed Metrolink station in the cities of Corona and Riverside.
- **Los Angeles Unified School District (LAUSD):** Project manager for the completion of Phase I Environmental Site Assessments at several proposed elementary school sites throughout Los Angeles county. Mr. Roberts also managed on-going monitoring of lithological pressure readings of an oil well located on the Belmont High School property. This work was completed under the direction and oversight of the Division of Oil, Gas, and Geothermal Resources.
- **Jack in the Box and Qdoba Restaurants:** Project Geologist managing numerous Phase I Environmental Site Assessments regarding real estate transactions for two major fast food restaurants. Since most of the properties are corner parcels which contained historical gasoline stations, Mr. Roberts would subsequently manage and conduct Phase II Subsurface Investigations to assess whether impacted soil and/or groundwater exists at the site and, if present, characterize the extent of the contaminants. In June 2012, Jack in the Box Inc. and Qdoba awarded Ardent Environmental Group, Inc. an on-call environmental management contract for all Jack in the Box and Qdoba properties throughout the United States. Mr. Roberts is the Project Manager for this contract which includes completing Preliminary Environmental Reviews of possible property acquisitions, completing and managing Phase I and Phase II Environmental Site Assessments and asbestos surveys, and on-call consultation regarding environmental issues and concerns.
- **Environmental Site Assessment:** Project Geologist managing environmental assessment, site characterization, and site remediation for a property located in the city of Santa Fe Springs, California. Historical aerial photographs, information obtained from the Division of Oil, Gas, and Geothermal Resources, and other data were used to assess the possible location of historical oil field activities and to design a site characterization plan. Following assessment of the volume of impacted soil, bid specifications were developed and site remediation was conducted.
- **Industrial Site Located in Riverside, California:** Project Geologist managing the subsurface investigation and characterization of an industrial site in Riverside, California. Groundwater monitoring wells and vapor extraction wells were installed in soil borings

RESUME OF PAUL A. ROBERTS
Principal Geologist

during site characterization. Utilizing equipment supplied by the client, a vapor extraction system was designed and installed at the site.

- **Remediation at Sites in Rancho Dominguez, Commerce, La Mirada, and Riverside, California.** Project Geologist managing the design and installation of many vapor extraction pilot wells for use in feasibility studies. The feasibility studies defined different soil parameters so that a vapor extraction system, including vapor extraction wells, could be designed. Services included management, design, and installation of vapor extraction wells for use in remediation at sites in Rancho Dominguez, Commerce, La Mirada, and Riverside, California.

Subject: Phase I Environmental Site Assessment and
Document Review
Former Pacific Airmotive Corporation Property
3003 North Hollywood Way
Burbank, California

Dear Mr. Tecimer:

Ardent Environmental Group, Inc. (Ardent) has performed a Phase I Environmental Site Assessment (ESA) and Document Review of the former Pacific Airmotive Corporation (PAC) property located at 3003 North Hollywood Way in the city of Burbank, California (site). Work was completed in accordance with Ardent's proposal dated April 23, 2015. The attached report presents our methodology, findings, opinions, and conclusions regarding the environmental conditions at the site.

We appreciate the opportunity to be of service to you on this project.

Sincerely,
Ardent Environmental Group, Inc.

EXECUTIVE SUMMARY

Ardent Environmental Group, Inc. (Ardent) was retained by Overton Moore Properties (OMP) to perform a Phase I Environmental Site Assessment (ESA) and Document Review for the former Pacific Airmotive Corporation (PAC) property located at 3003 North Hollywood Way in the city of Burbank, California ("site" or "subject property"). PAC formerly operated its facilities at two separate properties consisting of the "Main Facility" located at 2940 and 2960 North Hollywood Way and 2777 Ontario Street and the subject property referred to as the "Jet Engine Test Cell Facility" located at 3003 North Hollywood Way (collectively referred to herein as the "PAC Facility"). The Main Facility is located approximately 350 feet southeast of the site on a separate parcel. The site was formerly used to test aircraft engines. The site buildings were razed in 2013 and the site is currently vacant. OMP is considering purchasing the site for redevelopment for commercial purposes. Site assessment activities for this report were conducted between April 23, 2015 and June 2, 2015.

In summary, the following items were noted:

- The site was used for agricultural purposes or vacant land from at least 1928 through the late-1930s. From at least 1947 through 1996, the site was used for aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. The site buildings were razed in 2013 and the site is currently vacant.
- Groundwater has been reported at the site at depths of approximately 249 feet below the ground surface (bgs) and flows in a southeasterly direction. The site is located in the San Fernando Valley Groundwater Basin. Portions of the San Fernando Valley Groundwater Basin have been designated as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses. The site is located within the North Hollywood Operable Unit. The main chemicals of concern include volatile organic compounds (VOCs), namely trichloroethene (TCE) and tetrachloroethylene (PCE), and other chemicals such as hexavalent chromium and 1,4-dioxane.
- In 1992, a Cleanup and Abatement Order was issued to three responsible parties that formerly owned and/or operated businesses at the PAC Facility, these included Lockheed Advanced Development (Lockheed), American Real Estate Holding Limit Partnership, and PAC. Since the Main Facility was used as an aircraft parts fabrication operation including the storage and use of chlorinated solvents in degreasers, machining, and plating operations, most of the contaminated materials associated with the Cleanup and Abatement Order has been discovered at the Main Facility. Soil remediation and groundwater monitoring are currently being completed at this property.
- The Jet Engine Test Cell Facility was used for testing aircraft engines. Engines were placed in five test cells for operation, testing, and diagnosis. The engines were fueled by under-

ground pipelines leading from a number of underground storage tanks (USTs) used to store aviation gasoline and jet fuel. These operations included the use of clarifiers, a number of sumps, and fuel pumps.

- In 2013, a Phase I ESA was completed for the site by MWH Americas, Inc. (MWH) which included a review of a number of previous soil and groundwater investigations, UST removal activities, and soil remediation. Based on the result of the 2013 Phase I ESA, MWH provided a list of possible environmental concerns and determined whether data gaps existed. MWH subsequently completed a soil and soil gas investigation to fill in the data gaps discovered during the 2013 Phase I ESA. With the exception of PCE discovered in soil gas samples, laboratory results of soil samples collected throughout the site have shown little to no remaining contamination. Based on this information, there is a low likelihood that the residual soil contamination would pose a significant risk to groundwater or be considered a possible human health risk through dermal exposure. PCE was detected in soil gas samples slightly exceeding the California Human Health Screening Levels for industrial/commercial land use (CHHSLi). Based on this information, there is a moderate likelihood that a possible human health risk is present due to vapor intrusion.
- As part of the groundwater monitoring activities associated with the Cleanup and Abatement Order, a number of groundwater monitoring wells were installed at the PAC Facility. As part of this monitoring activity, three groundwater monitoring wells were installed on-site, designated MW-1 through MW-3. Monitoring wells MW-1 and MW-2 have been dry since 1991. Although laboratory results of groundwater samples collected from MW-3 have shown concentrations of chlorinated solvents exceeding drinking water standards, the concentrations on-site are much lower than the downgradient sampling results on the Main Facility. Based on the lack of chlorinated solvents discovered on-site in discrete soil samples and the relatively low concentrations discovered in groundwater, there is a low likelihood that the site has significantly contributed to the regional groundwater issues.
- The subject property is part of a Cleanup and Abatement Order associated with a much more contaminated property located approximately 350 feet southeast of the site (i.e. the Main Facility). Due to the on-going soil remediation and groundwater monitoring associated with this property, regulatory closure for soil and/or groundwater has not been obtained for the site.
- The OMP Purchase and Sale Agreement includes a Deed Restriction that apparently has not yet been recorded with the Los Angeles County Tax Assessors. Once recorded, on-site development will be restricted to commercial land use and groundwater shall not be extracted for any purpose other than for chemical monitoring activities.
- Other than the regional groundwater and potential vapor intrusion issues, no other on- or off-site environmental concerns were noted.

Ardent has performed this Phase I ESA in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Practice E 1527-13, ASTM Practice E 2600-10, and the EPA Standards and Practices for All Appropriate Inquires (AAI), Final Rule (40 CFR, Part 312), for the former PAC property located at 3003 North Hollywood Way in the city of

Burbank, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. No evidence or indication of recognized environmental conditions (RECs), or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property has been revealed, with the exception of the possible vapor intrusion concern and regional groundwater issues.

Based on the results of this investigation, Ardent presents the following recommendations.

- A soil gas evaluation should be completed prior to redevelopment of the site. This task would include a review of building plans with respect to recent soil gas sampling locations and results. Based on this evaluation, additional soil gas points may be needed to provide an adequate data set beneath the proposed building pad. Following collection of the laboratory data, a Human Health Risk Assessment (HHRA) should be completed to assess whether a human health risk is present and whether engineering controls (e.g. a vapor barrier) are needed beneath the proposed building(s) to limit vapor intrusion.
- If the existing groundwater monitoring wells are needed to be abandoned and/or relocated due to proposed construction plans, authorization needs to be obtained from the EPA.

1 INTRODUCTION

Ardent Environmental Group, Inc. (Ardent) was retained by Overton Moore Properties (OMP) to perform a Phase I Environmental Site Assessment (ESA) and Document Review for the former Pacific Airmotive Corporation (PAC) property located at 3003 North Hollywood Way in the city of Burbank, California (“site” or “subject property;” Figure 1). Work was conducted in accordance with the proposal dated April 23, 2015 between OMP and Ardent. PAC formerly operated its facilities at two separate properties consisting of the “Main Facility” located at 2940 and 2960 North Hollywood Way and 2777 Ontario Street and the subject property referred to as the “Jet Engine Test Cell Facility” located at 3003 North Hollywood Way (Figures 2 and 3; collectively referred to herein as the “PAC Facility”). The Main Facility is located approximately 350 feet southeast of the site on a separate parcel. The site was formerly used to test aircraft engines. The site buildings were razed in 2013 and the site is currently vacant. OMP is considering purchasing the site for redevelopment for commercial purposes. The following sections identify the purpose, the involved parties, the scope of work, and the limitations and exceptions associated with the Phase I ESA.

1.1 Purpose of Phase I ESA

In accordance with the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard E 1527-13), the objective of the Phase I ESA was to identify, to the extent feasible pursuant to ASTM Standard E 1527-13, recognized environmental conditions (RECs), which are defined by ASTM as “...the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

The United States Environmental Protection Agency (“USEPA” or “EPA”) has stated that ASTM Standard E 1527-13, is consistent with the Standards and Practices for All Appropriate Inquires (AAI), Final Rule (40 Code of Federal Regulations [CFR], Part 312) and is compliant with the statutory criteria for all appropriate inquiries. All appropriate inquiries, as defined in the AAI Final Rule, must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liabil-

ity Act (CERCLA) prior to acquiring a property or seeking or receiving federal Brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, was to identify releases and threatened releases of hazardous substances which cause or threaten to cause the incurrence of response costs.

As part of this Phase I ESA, Ardent also assessed whether a vapor encroachment condition (VEC) exists at the site. The VEC assessment was completed following the ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (ASTM Standard E 2600-10). The objective of this work was to evaluate whether possible contaminants (e.g. volatile organic compounds [VOCs]) are present in soil and/or groundwater in the site vicinity which might pose a possible vapor intrusion into existing or future buildings at the site.

1.2 Involved Parties

Ms. Connie Lizarraga of Ardent conducted the historical research, site reconnaissance, regulatory inquiries, and document review. Mr. Paul Roberts completed oversight and management. Both Mr. Roberts and Ms. Lizarraga meet the definition of an environmental professional as set forth in the AAI Final Rule.

1.3 Scope of Work

Ardent's scope of work for this Phase I ESA is consistent with ASTM Standard E1527-13 and included the activities listed below.

- **Review of User Provided Information** – Review of information regarding title and judicial records for environmental liens or activity and use limitations, recorded environmental liens, actual or specialized knowledge or commonly known information regarding environmental conditions at the site, the relationship of the purchase price of the property to the fair market value, readily available maps, environmental reports, and other environmental documents pertaining to the site, as available and obtained from the user/client.
- **Records Review** – Acquisition and review of records, including federal, state, tribal, and local regulatory agency databases, for the site and for properties located within a specified radius of the site; local regulatory agency files for the site and selected nearby properties of potential environmental concern; physical setting sources, including topographic maps, geologic maps, and geologic and hydrogeologic reference documents; and historic land use information including aerial photographs, historical fire insurance rate maps, building department records, and city directories, as necessary, that are rea-

sonably ascertainable, publicly available, can be obtained within reasonable time and cost, and are practically reviewable.

- **Vapor Encroachment Condition (VEC)** – Review available regulatory and client provided data to assess Tier 1 non-numeric screening for the site. Ardent evaluated whether contaminants were present in soil and/or groundwater in the site vicinity which might pose a VEC at the site.
- **Site Reconnaissance** – Performance of a site reconnaissance to visually observe the site and any structure(s) located on the site to the extent not obstructed by bodies of water, adjacent buildings, or other obstacles. The purpose of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the site, including the general site setting, site usage, use and storage of hazardous materials and petroleum products, disposal of waste products and materials, sources of polychlorinated biphenyls (PCBs), and evidence of releases and possible risks of contamination from activities at adjacent properties.
- **Interviews** – Interviews with site representatives, including owners, occupants, and site managers, regarding the environmental condition of the site to the extent necessary and such persons are available. Interviews with state and/or local government officials as necessary.
- **Report** – Evaluation of the information and data obtained by the Phase I ESA process outlined above and preparation of this Phase I ESA report documenting findings and providing opinions and conclusions regarding possible environmental impacts and RECs at the site.

1.4 Limitations and Exceptions

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ardent should be contacted if the reader requires any additional information or has questions regarding the content, interpretations presented, or completeness of this document.

The findings, opinions, and conclusions are based on an analysis of the observed site conditions and the referenced literature. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject property or nearby sites. In addition, changes to the applicable laws, regulations,

codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ardent has no control. Ardent cannot warrant or guarantee that not finding indicators of any particular hazardous material means that this particular hazardous material or any other hazardous materials do not exist on the site. Additional research, including invasive testing, can reduce the uncertainty, but no techniques now commonly employed can eliminate the uncertainty altogether.

1.5 Special Terms and Conditions

As indicated in Section 13.1.5 of ASTM Standard E 1527-13, the following, which is not intended to be all inclusive, represents out-of-scope items with respect to a Phase I ESA: asbestos-containing building materials (ACMs), radon, lead-based paint (LBP), lead in drinking water, wetlands, regulatory compliance, cultural and historic risk, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, biological agents, and mold. As part of our agreement with the client, Ardent visually assessed site buildings (if present) for possible ACMs, LBP, and mold. In addition, ASTM Standard E 2600-10 supplements the ASTM Standard E 1527-13 to include evaluation of VEC using Tier 1 screening.

This study did not include an evaluation of geotechnical conditions or potential geologic hazards. In addition, Ardent did not address interpretations of zoning regulations, building code requirements, or property title issues.

1.6 User Reliance

This report may be relied upon and is intended exclusively for use by the client, its partners, members, investors, affiliates, successors and assigns, and lenders. Any use or reuse of the findings, opinions, and/or conclusions of this report by parties other than the foregoing parties is undertaken at said parties' sole risk.

1.7 Physical Limitations

No physical limitations were encountered during the completion of this Phase I ESA report.

1.8 Data Gaps

No significant data gaps were noted during the preparation of this Phase I ESA report.

2 GENERAL SITE CHARACTERISTICS

The following sections describe the location and the current uses of the site and adjacent properties. A site location map is presented as Figure 1 and a site vicinity map is presented as Figure 2. Selected photographs of the site and surrounding properties are provided in Appendix A.

2.1 Location and Legal Description

The site is located approximately 260 feet west of the intersection of North Hollywood Way and Tulare Avenue in the city of Burbank, California (Figure 1). The site has been assigned the address of 3003 North Hollywood Way and the Tax Assessor Parcel Number (APN) 2466-011-013. A complete legal description is presented in the Preliminary Title Report provided in Appendix C.

It should be noted that the former PAC facility comprised two separate properties, the Main Facility located at 2940 and 2960 North Hollywood Way and 2777 Ontario Street and the Jet Engine Test Cell Facility located at 3003 North Hollywood Way (subject property; Figures 2 and 3). Most of the early documents were filed using the Main Facility address of 2940 North Hollywood Way. Based on this information, Ardent requested file reviews using both the Main Facility addresses and the Jet Engine Test Cell Facility address.

The site is bounded by commercial truck parking to the north and east, vacant land to the west, and Tulare Avenue to the south (Figure 2). Site boundary information was obtained during the site reconnaissance and information provided by the client.

2.2 Site Description and Current Site Uses/Operations

The following paragraphs present a description of the structures present at the site, the tenants currently occupying the site, the activities being conducted on-site, the heating and cooling systems utilized in the site building, the sewage disposal system, and the potable water provider for the site, if any.

2.2.1 Site Description

The subject property is a generally flag-shaped lot that comprises approximately 0.69-acres in size. At the time of the site reconnaissance, the site was vacant land (Figure 2).

2.2.2 Occupants

The site buildings were recently razed and the site is currently vacant land.

2.2.3 Heating and Cooling Systems

Future heating and cooling will likely be powered by electricity and/or natural gas provided by local municipalities.

2.2.4 Sewage Disposal/Septic Systems

Future sewage disposal will likely be provided by the city municipalities. There has been no indication that septic systems have been used at the site.

2.2.5 Potable Water

Potable water is provided to the site by the local water purveyor.

2.3 Adjacent Properties

In general, the site vicinity is used for commercial and office purposes (Figure 2). The site is generally bounded by commercial truck parking, north, south, and east, and vacant land to the west. Approximately 1,800 feet southwest of the site is the Bob Hope Airport (aka Burbank Airport).

No evidence of aboveground storage tanks (ASTs), underground storage tanks (USTs) or other possible hazardous materials or wastes were noted being stored by off-site facilities along the site property line. These off site facilities would not be considered an environmental concern to the site.

3 USER PROVIDED INFORMATION

The following sections summarize information obtained by the user to assist the environmental professional in identifying the possibility of RECs in connection with the subject property, and to

fulfill the user's responsibilities in accordance with Section 6 of ASTM Standard E 1527-13. A copy of the user questionnaire as completed by Mr. Timur Tecimer of Overton Moore Properties is presented in Appendix B.

3.1 Current Title Information

A Preliminary Title Report provided by the client was reviewed by Ardent. The title report prepared by Chicago Title Company was dated February 2, 2014. According to the Preliminary Title Report, the current owner of the site is "Pacific Airmotive Corporation, Inc." A copy of the Preliminary Title Report is provided in Appendix C.

3.2 Environmental Liens or Activity and Use Limitations (AULs)

Mr. Tecimer indicated that environmental liens or AULs against the subject property have been filed or recorded under federal, state, or local law. The OMP Purchase and Sale Agreement includes a Deed Restriction that apparently has not yet been recorded with the Los Angeles County Tax Assessors. Once recorded, on-site development will be restricted to commercial land use and groundwater shall not be extracted for any purpose other than for chemical monitoring activities

3.3 Specialized Knowledge

Mr. Tecimer indicated that, for purposes of this assessment, the client has no specialized knowledge or experience pertaining to the site or the adjacent properties that is material to RECs in connection with the subject property.

3.4 Commonly Known or Reasonably Ascertainable Information

Mr. Tecimer was aware of commonly known or reasonably ascertainable information pertaining to the site. Mr. Tecimer referred to the previous environmental reports provided to Ardent for review.

3.5 Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to fair market value of the

property if the property was not affected by hazardous substances or petroleum products. Mr. Tecimer indicated the purchase price reflects fair market value.

3.6 Reason for Performing Phase I ESA

Ardent was retained to perform the Phase I ESA as part of the real estate due diligence as part of a possible purchase of the site.

3.7 Other User Provided Information

The client provided Ardent a number of environmental documents for review. Ardent also obtained copies of reports from regulatory agency files. The site is part of a Cleanup and Abatement Order issued to three entities associated with operations and/or ownership of the site and an adjacent parcel (Figure 3). The PAC Facility was used to fabricate aircraft parts and to test aircraft engines. For purposes of this report, the properties include the site, referred to as the “Jet Engine Test Cell Facility” located at 3003 North Hollywood Way, and the “Main Facility” located at 2940 and 2960 North Hollywood Way and 2777 Ontario Street (Figure 3; collective referred to as the “PAC Facility”). The property associated with the Main Facility is located approximately 350 feet southeast of and hydraulically downgradient from the site.

In 1992, a Cleanup and Abatement Order was issued to the three responsible parties; Lockheed Advanced Development (Lockheed), American Real Estate Holding Limited Partnership (AREHLP), and PAC. The Cleanup and Abatement Order refers to these properties as the “Lockheed Plant B-6 East Facilities (Building 369 and 371).” It should be noted that Buildings 369 and 371 correlate to buildings formerly located on the Main Facility. The Cleanup and Abatement Order was issued by the Regional Water Quality Control Board, Los Angeles Region (RWQCB) on behalf of the EPA to cleanup and abate VOC-contamination of soil and groundwater associated with the EPA San Fernando Valley Groundwater Basin Superfund Site. Since the Main Facility was used as an aircraft parts fabrication operation including the storage and use of chlorinated solvents in degreasers, machining, and plating operations, most of the contaminated materials associated with the Cleanup and Abatement Order were discovered at the Main Facility. Soil remediation and groundwater monitoring are currently being completed at this property.

The Jet Engine Test Cell Facility was used for testing aircraft engines. Engines were placed in five test cells for operation, testing, and diagnosis. The engines were fueled by underground pipelines leading from a number of USTs used to store aviation gasoline and jet fuel. These operations included the use of clarifiers, a number of sumps, and fuel pumps.

In 2013, a Phase I ESA was completed by MWH Americas, Inc. (MWH) for General Electric Company (GE); PAC is a subsidiary of GE (referred to herein as the "2013 Phase I ESA"). The 2013 Phase I ESA included a review of a number of previous soil and groundwater investigations, UST removal activities, and soil remediation. Based on the result of the 2013 Phase I ESA, MWH provided a list of possible environmental concerns and determined whether data gaps existed. MWH subsequently completed a soil and soil gas investigation to fill in the data gaps discovered during the 2013 Phase I ESA. During completion of these investigations, the site buildings were present, although vacant. Since this time, the on-site buildings have been demolished. It should be noted that these reports were prepared for the current owner and provided findings, but did not provide conclusions or recommendations.

The OMP Purchase and Sale Agreement includes a Deed Restriction that apparently has not yet been recorded with the Los Angeles County Tax Assessors. Once recorded, on-site development will be restricted to commercial land use and groundwater shall not be extracted for any purpose other than for chemical monitoring activities

The following presents a summary of the historical land use, historical subsurface investigations, a summary of soil and groundwater investigations, and current regulatory status.

3.7.1 Historical Land Use

The site was formerly used by PAC and its successors from 1947 through 1996. During this time, the surrounding properties were reportedly being used/operated by the large Lockheed B-6 Plant associated with the nearby Burbank Airport. Historical on-site activities included aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. In 1997, GE acquired an entity, which subsequently acquired the parent company of PAC. Consequently, PAC is now an indirect, wholly-owned subsidiary of GE.

As part of its operations, the site buildings contained five engine test cells (“Test Cell Nos. 1 through 5”) and associated exhaust areas, control rooms, a number of sumps, clarifiers, floor and trench drains, underground product pipelines, fuel pumps, ASTs, and at least 13 USTs (Figure 4). Jet fuel and aviation gasoline were stored in USTs at the site and pumped via underground product pipelines to the Test Cells. Chemicals that were reportedly used at the site included petroleum fuels, oils, greases, Stoddard solvents, chlorinated solvents used as a degreaser, and aromatic hydrocarbons associated with the petroleum fuels and solvents.

Based on the results of the 2013 Phase I ESA, MWH produced a list of site features of possible environmental concern and determined if each feature had been properly addressed during previous investigations (see Table 2 in Appendix C). If the feature had not been properly investigated, those features were determined to be inadequately investigated and were labeled as data gaps. In 2014, MWH completed a soil and soil gas investigation to further assess the data gaps discovered in the 2013 Phase I ESA.

3.7.2 Historical Subsurface Investigations

A number of investigations have been completed throughout the site since 1984. Most of the work was completed under the direction and oversight of the EPA, RWQCB, and/or the City of Burbank Fire Department (BFD). The earlier investigations were associated with the removal of USTs and groundwater investigations associated with the Cleanup and Abatement Order. Of the 13 reported USTs located at the site, ten were well documented as being installed and operated. During completion of the 2013 Phase I ESA, MWH reviewed in-house plans regarding the former Jet Engine Test Cell Facility. According to the plans, three potential USTs may or may not have been installed and operated at the site (see Potential Former Tank X, Y, and Z on Figure 4). Based on removal documentation and/or subsequent subsurface investigation results, there has been no indication that USTs remain at the site. Although all of the USTs appear to have been removed from the site, regulatory closure letters have not been obtained for all of the USTs. The earlier USTs were removed prior to regulatory oversight of removal activities.

In October 1984, approximately 3,300-gallons of jet fuel spilled east of Test Cell No. 4. Soil investigations from 1984 through 1986 were completed to assess the impacts to soils related to the spill and to help identify a fuel supply line which was thought to be the probable source. Chemicals detected in soil samples from these investigations included total petroleum hydrocarbons as jet fuel (TPHj), toluene, acetone, and methylene chloride. In general, TPHj and toluene were the chemicals of concern. Toluene was detected to depths of up to 50 feet bgs and TPHj was detected to depths of approximately 74 feet bgs. Two areas were identified with elevated jet fuel, referred to as Area 1 and Area 2 (Figure 4). In 1995, these areas were excavated to a depth of approximately 25 feet in Area 1 and to 30 feet in Area 2. Metal shoring was used and possibly left in-place along the north and east walls of Area 1 and possibly along the north and west walls of Area 2 (MWH, 2014). Laboratory results of impacted soil remaining included concentrations of approximately 10,000 milligrams per kilogram (mg/kg) of TPHj at the base of the excavation (30 feet bgs) to 4,000 mg/kg at a depth of approximately 74 feet bgs in a soil boring. Jet fuel was not detected in soil samples collected at depths of 79 and 83 feet bgs. The excavations were subsequently backfilled with clean soil and resurfaced. As noted below, jet fuel and aviation gasoline has not been detected in groundwater samples collected at the site.

In 1998, a 20,000-gallon UST (aka Former Tank 1 on Figure 4) was removed from the site. A concrete pad beneath the UST was left in-place due to concerns of a close by fire suppression water line. Laboratory results of confirmation soil samples collected at the perimeter of the pad indicated low concentrations of petroleum hydrocarbons (up to 410 mg/kg) and methyl tertiary butyl ether (up to 0.013 mg/kg). The BFD issued a no further action (NFA) letter dated March 5, 1999.

3.7.3 Groundwater Investigations

Two groundwater monitoring wells (MW-1 and MW-2) were installed at the site to a depth of approximately 215 feet bgs to further assess whether the jet fuel release noted above had affected groundwater. Both wells were sampled on a semi-annual basis until June 1989. Laboratory results indicated no detectable concentrations of total petroleum hydrocarbons as gasolines (TPHg), as diesel fuel (TPHd), and TPHj.

However, trichloroethene (TCE), tetrachloroethylene (PCE), and other volatile organic compounds (VOCs) were reported. In 1991, both wells were reported dry. Historical groundwater data collected in 1987 and 1988 from MW-1 and MW-2, prior to going dry, reported concentrations of PCE ranging from 67 to 160 micrograms per liter (ug/l) in MW-1 and from 130 to 200 ug/l in MW-2. TCE was reported in well MW-1 at concentrations up to 31 ug/l and in MW-2 up to 41 ug/l (Tetra Tech, 2010). For comparison purposes, the California Maximum Contaminant Level (MCL) for PCE and TCE is 5 ug/l. MCLs are not cleanup guidelines, but rather standards the State of California sets for purveyors of drinking water. MCLs, or multiples thereof, are sometimes used by regulatory agencies as guidelines to determine whether groundwater is considered impacted.

Groundwater monitoring well MW-3 was installed at the site in 1992 at a depth of approximately 285 feet bgs. From September 1992 through January 1995, laboratory results of groundwater samples collected from MW-3 indicated TCE at concentrations ranging from 6.4 to 12 ug/l, and PCE from 18 to 63 ug/l. Groundwater sampling from 1996 through 2005 was not reported. From March 2006 through June 2009, laboratory results of groundwater samples collected from MW-3 indicated TCE at concentrations ranging from 8.3 to 45 ug/l and PCE at concentrations from 29 to 150 ug/l (Tetra Tech, 2010). Laboratory results indicated low concentrations of hexavalent chromium (up to 1.8 ug/l) during sampling events of MW-3 completed from 2006 through 2009. Depth to groundwater was reported in MW-3 during the last quarter of 2009 and the first quarter of 2010 at depths of approximately 243.87 and 244.72 feet bgs, respectively. Groundwater data collected in April 2012 showed the groundwater level measuring 249 feet bgs. No later groundwater data was available in the RWQCB files during completion of this Phase I ESA.

The site is located within the San Fernando Valley Groundwater Basin. The San Fernando Groundwater Basin is part of the EPA Pacific Southwest, Region 9, Superfund Area 1 (North Hollywood Operable Unit). This area contains contaminated groundwater (primarily chlorinated VOCs) beneath North Hollywood section of the city of Los Angeles and the city of Burbank (Figure 5).

In a 1988 EPA questionnaire, PAC admitted that it stored and used various solvents including 1,1,1-trichloroethane (1,1,1-TCA) and methylene chloride at its Main Facility and Jet Engine Test Cell Facility. Based on this information and the fact that previous jet fuel spills had occurred at both properties, the RWQCB requested additional investigations. Soil investigations completed in 1988 indicated the presence of PCE and TCE. Subsequent groundwater investigations included the installation of eight groundwater monitoring wells, MW-1 through MW-3 at the subject property and MW-4 through MW-8 at the Main Facility. As noted above, monitoring wells MW-1 and MW-2 have been dry during most of the sampling events. Over the years, concentrations of chlorinated solvents in MW-3 have shown much lower concentrations than those sampled on the Main Facility. In the early years of the investigations (1992-1995), PCE was reported at the Main Facility at concentrations up to 2,100 ug/l and TCE up to 440 ug/l. In later years (2006-2009), these concentrations diminished with PCE up to 170 and TCE up to 84 ug/l. Although the concentrations of these constituents were much lower on the subject property than on the Main Facility, a Cleanup and Abatement Order was issued in 1992 naming the site and the Main Facility as responsible for contributing to the impacted groundwater associated with the San Fernando Valley Groundwater Basin Superfund Site.

Groundwater was initially treated from the North Hollywood Operable Unit starting in 1987 by a treatment plant. As VOC-contaminated groundwater continued to migrate and other chemicals of concern were identified (i.e. hexavalent chromium and 1,4-dioxane), the EPA completed a Focused Feasibility Study (FFS) to evaluate alternatives for changing the groundwater remedy. In 2014, a Record of Decision (ROD) amending the 2009 Second Interim ROD was signed by the EPA. The selected remedy included well-head treatment for hexavalent chromium and 1,4-dioxane, expanding the combined treatment system, installing additional monitoring wells, and installing and operating three additional groundwater extraction wells. These treated waters are provided to the Los Angeles County Department of Water and Power (LADWP) for drinking water.

Currently, Lockheed is completing the groundwater monitoring activities for the PAC Facility. Based on our review of RWQCB files, no groundwater data were available

later than 2010. Currently, soil remediation by vapor extraction is being completed on the Main Facility. Based on this information, the PAC Facility (including the site) is considered an open case with the RWQCB (for soil) and EPA (for groundwater).

3.7.4 Recent Soil and Soil Gas Investigations by MWH

As noted above, MWH completed a Phase I ESA in 2013 and a soil and soil gas investigation in 2014. The 2013 Phase I ESA was completed to identify areas of possible concern that had not been previously investigated (i.e. data gaps). Based on this information, MWH created Table 2 in Appendix C that presents the areas of concern, any previous investigations, the results, and whether additional investigations were warranted. Based on this review, a number of areas needing additional investigations were identified.

The soil gas investigation included the advancement of 16 soil gas probes to depths of up to 15 feet bgs. Selected samples were collected from soil vapor monitoring points generally placed at 5 and 15 feet bgs for chemical analyses including TPH and VOCs. Installation and sampling were completed in general accordance with Department of Toxic Substances Control (DTSC) guidelines. The soil investigation included advancing 17 soil borings to depths of up to 90 feet bgs. Selected soil samples were analyzed for VOCs, semi-VOCs (SVOCs), polychlorinated biphenyls (PCBs), Title 22, metals, and total petroleum hydrocarbons carbon chain (TPHcc). Key figures showing the previous sampling activities completed at the site and the soil and soil gas investigation by MWH are provided in Appendix C.

Soil gas samples were compared to the Cal-EPA California Human Health Screening Levels for industrial/commercial land use (CHHSLi). It should be noted that MWH used CHHSLi values for buildings constructed without engineered fill below sub-slab gravel for comparison purposes (i.e. 0.6 ug/l). These values are extremely conservative. Based on these values, elevated concentrations of PCE (up to 5.4 ug/l) were noted throughout the eastern portion of the site. Although the concentrations were slightly above the CHHSLi values, the concentrations may present a possible human health risk to future occupants of the site through vapor intrusion. Further evaluation is needed.

Laboratory results of soil samples collected in selected areas of the site indicated no detectable to low concentrations of chemicals analyzed. The laboratory results for VOCs, SVOCs, and PCBs were compared to the Federal EPA Region 9 Regional Screening Levels for industrial/commercial land use (RSLi); metals were compared to RSLi and background concentrations for arsenic (11 milligrams per kilogram [mg/kg]); and petroleum hydrocarbons were compared to the RWQCB Interim Site Assessment and Cleanup Guidebook dated May 1996. With the exception of PCE in shallow soil gas, there has been no indication that elevated concentrations of chemical constituents are present at the site that would pose a migration risk to groundwater or pose a potential human health risk through dermal contact.

3.7.5 Demolition and Site Restoration

From August 2013 through September 2013, MWH completed destruction and restoration of the site. This included testing and abating the buildings of hazardous materials including asbestos, light ballasts, mercury and florescent lighting fixtures, carbon dioxide canisters, batteries, mercury switches and thermometers, and pigeon droppings. Following removal of these materials, the buildings were demolished and soil beneath elevated flooring was tested and removed from the site. All subsurface features, such as clarifiers and sumps were filled with soil. Stained concrete was tested for petroleum hydrocarbons and disposed of according to laboratory results.

Some limited soil sampling was completed from soils beneath elevated concrete surfaces associated with the Loading Dock, Storage Room No. 1, Test Cell No. 2, and Test Cell No. 4. Laboratory results of soil samples collected at 1-foot bgs in these areas were analyzed for TPHcc, VOCs, and Title 22 metals. Laboratory results indicated no detectable concentrations of VOCs, and no detectable to low concentrations of petroleum hydrocarbons (up to 95 mg/kg) and metals.

Subsurface features that were filled with on-site soils included two clarifiers, two sumps, an electrical vault, and trench and floor drains. Prior to filling these features, any remaining equipment was removed. An excavator was used to advance holes in the bottom of the feature to prevent water retention, and the structures were filled

and mechanically compacted. The features were filled so that the grade was flush to the surrounding area.

3.7.6 Ardent's Summary of Review

Based on investigations described above, Ardent presents the following summary of our review.

- The site was used for agricultural purposes or vacant land from at least 1928 through the late-1930s. From at least 1947 through 1996, the site was used for aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. The site buildings were razed in 2013 and the site is currently vacant.
- Groundwater has been reported at the site at depths of approximately 249 feet bgs and flows in a southeasterly direction. The site is located in the San Fernando Valley Groundwater Basin. Portions of the San Fernando Valley Groundwater Basin have been designated as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses. The site is located within the North Hollywood Operable Unit. The main chemicals of concern include VOCs, namely TCE and PCE, and other chemicals such as hexavalent chromium and 1,4-dioxane.
- In 1992, a Cleanup and Abatement Order was issued to three responsible parties that formerly owned and/or operated businesses at the PAC Facility, these included Lockheed Advanced Development, American Real Estate Holding Limit Partnership, and PAC. Since the Main Facility was used as an aircraft parts fabrication operation including the storage and use of chlorinated solvents in degreasers, machining, and plating operations, most of the contaminated materials associated with the Cleanup and Abatement Order has been discovered at the Main Facility. Soil remediation and groundwater monitoring are currently being completed at this property.
- The Jet Engine Test Cell Facility was used for testing aircraft engines. Engines were placed in five test cells for operation, testing, and diagnosis. The engines were fueled by underground pipelines leading from a number of USTs used to store aviation gasoline and jet fuel. These operations included the use of clarifiers, a number of sumps, and fuel pumps.
- In 2013, a Phase I ESA was completed for the site by MWH which included a review of a number of previous soil and groundwater investigations, UST removal activities, and soil remediation. Based on the result of the 2013 Phase I ESA, MWH provided a list of possible environmental concerns and determined whether data gaps existed. MWH subsequently completed a soil and soil gas investigation to fill in the data gaps discovered during the 2013 Phase I ESA. With the exception of PCE discovered in soil gas samples, laboratory results of soil samples

collected throughout the site have shown little to no remaining contamination. Based on this information, there is a low likelihood that the residual soil contamination would pose a significant risk to groundwater or be considered a possible human health risk through dermal exposure. PCE was detected in soil gas samples slightly exceeding the CHHSLi. Based on this information, there is a moderate likelihood that a possible human health risk is present due to vapor intrusion.

- As part of the groundwater monitoring activities associated with the Cleanup and Abatement Order, a number of groundwater monitoring wells were installed at the PAC Facility. As part of this monitoring activity, three groundwater monitoring wells were installed on-site, designated MW-1 through MW-3. Monitoring wells MW-1 and MW-2 have been dry since 1991. Although laboratory results of groundwater samples collected from MW-3 have shown concentrations of chlorinated solvents exceeding drinking water standards, the concentrations on-site are much lower than the downgradient sampling results on the Main Facility. Based on the lack of chlorinated solvents discovered on-site in discrete soil samples and the relatively low concentrations discovered in groundwater, there is a low likelihood that the site has significantly contributed to the regional groundwater issues.
- The subject property is part of a Cleanup and Abatement Order associated with a much more contaminated property located approximately 350 feet southeast of the site (i.e. the Main Facility). Due to the on-going soil remediation and groundwater monitoring associated with this property, regulatory closure for soil and/or groundwater has not been obtained for the site.
- The OMP Purchase and Sale Agreement includes a Deed Restriction that apparently has not yet been recorded with the Los Angeles County Tax Assessors. Once recorded, on-site development will be restricted to commercial land use and groundwater shall not be extracted for any purpose other than for chemical monitoring activities.
- It should be noted that shoring materials, a concrete pad, and subsurface features such as clarifiers, floor drains, electrical rooms, and sumps have been left in-place at the site during soil remediation, UST removal, and building demolition activities. A geotechnical firm should be consulted to assess whether these materials/structures may need to be removed for geotechnical purposes.

4 PHYSICAL SETTING

The following sections include discussions of topographic, geologic, and hydrogeologic conditions in the vicinity of the site, based upon our document review and our visual reconnaissance of the site and adjacent areas.

4.1 Site Topography

Based on the review of the United States Geological Survey (USGS) 7.5 Minute Series, Burbank, California, Topographic Quadrangle Map dated 1994, photorevised from 1966, the site has an approximate elevation of 715 feet above mean sea level (msl) and slopes to the southeast.

4.2 Geology

The site is located in the western portion of the Transverse Range Geomorphic Province, on the northwestern structural block of the Los Angeles basin. The Verdugo Mountains, a surface expression of the Verdugo Faults within the San Fernando Valley, are located approximately one mile northeast of the site. The San Fernando Valley contains up to 2,000 feet of alluvial sediments resting on mid-Tertiary marine sedimentary beds and volcanics. The site is underlain by Quaternary age sand and gravels derived from crystalline and sedimentary rocks in the surrounding mountains.

4.3 Oil and Gas Maps

Based on a review of the Division of Oil, Gas, and Geothermal Resources (DOGGR) on-line well finder the site does not lie in an active oil field and no oil wells have been drilled on the site or in the immediate site vicinity.

4.4 Site Hydrology

The following sections discuss the site hydrology in terms of both surface waters and groundwater.

4.4.1 Surface Waters

No natural surface water bodies, including ponds, streams, or other bodies of water are present on or adjacent to the site.

4.4.2 Groundwater

The site is located within the San Fernando Valley Groundwater Basin. The San Fernando Valley Basin is part of the EPA Pacific Southwest, Region 9, Superfund Area 1 (North Hollywood Operable Unit). This area contains contaminated ground-

water (primarily chlorinated VOCs) beneath North Hollywood section of the city of Los Angeles and the city of Burbank (Figure 5).

As previously discussed in Section 3.7, groundwater investigations completed at the site have included the installation and sampling of three on-site groundwater monitoring wells (MW-1, MW-2, and MW-3). Groundwater monitoring wells MW-1 and MW-2 were installed at the site to a depth of approximately 215 feet bgs to further assess whether a jet fuel release noted had affected groundwater. Both wells were sampled on a semi-annual basis until June 1989. Laboratory results indicated no detectable concentrations of TPHg, TPHd, and TPHj. However, TCE, PCE, and VOCs were reported. In 1991, both wells were reported dry. Groundwater monitoring well MW-3 was installed at the site in 1992 at a depth of approximately 285 feet bgs. From March 2007 through September 2010, groundwater levels at the site were reported at a depth of approximately 244 feet bgs. Groundwater data collected in April 2012 showed the groundwater level measuring 249 feet bgs. Groundwater flows in a southeasterly direction.

5 HISTORICAL LAND USE

Ardent conducted a historical record search for both the site and surrounding areas. This included a review of one or more of the following sources that were found to be both reasonably ascertainable and useful for the purposes of this Phase I ESA: historical aerial photographs, historical fire insurance maps, historical city directories, building permits and plans, topographic maps, property tax records, zoning/land use records, and a review of prior environmental assessment reports regarding the site. Copies of historical land use information are provided in Appendix E.

5.1 Summary of Historical Land Use of the Property

The site was used for agricultural purposes or vacant land from at least 1928 through the late-1930s. From at least 1947 through 1996, the site was used for aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. The site buildings were razed in 2013 and the site is currently vacant.

5.2 Summary of Historical Land Use of Adjoining Properties

The site vicinity was used for agricultural purposes, vacant land, and some residential purposes from at least 1928 through the late-1940s. By the early-1950s properties in the site vicinity were fully developed for commercial, industrial, and some residential purposes as was noted during the site reconnaissance.

5.3 Fire Insurance Rate Maps

Historical Sanborn Fire Insurance Rate Maps (Sanborn maps) were requested from Environmental Data Resources Inc. (EDR) of Milford, Connecticut. Sanborn maps for selected years between 1953 and 1969 were provided by EDR. The following presents a summary of our review.

- **1953** – The site was labeled as Pacific Airmotive Corporation and was developed with portions of the Jet Engine Test Cell Facility. Test Cell Nos. 1 through 4 were apparent in the location as shown on Figure 4. A smaller structure was noted in the location of Test Cell No. 5 in the northeastern corner of the site and was labeled as “Motor Testing and Manual CO₂ System.” Properties north of the site were labeled as “Lockheed Aircraft Corporation Plant B-6.” Properties south of the site were labeled as “Aircraft Overhauling” and “Aircraft Storage.” Properties east of the site were labeled as “employee parking lot” and properties west of the site were labeled as “canteen,” “switch house,” and “electrical maintenance.”
- **1954, 1955, 1960, 1966, 1968, and 1969** - The site appeared similar to the 1953 map, although these maps were less legible than the 1953 map. Properties located north, east, and west were also not clearly legible. Properties south of the site continued to be used as “Aircraft Overhauling” and “Aircraft Storage.”

5.4 Historical Aerial Photographs

Historical aerial photographs for selected years between 1928 and 2012 were provided by EDR. The following presents a summary of our review.

- **1928 and 1938** – The site and immediate site vicinity appeared to be used for agricultural purposes or vacant land. Sparsely located residential structures were noted further north and south of the site. The Burbank Airport was first noted in the 1938 photograph.
- **1952, 1954, 1964, 1977, 1981, 1989, 1994, 2002, 2005, 2009, 2010, and 2012** – The site was developed with the former Jet Engine Test Cell Facility. North Hollywood Way was observed east of the site. By 1954, properties in the surrounding vicinity appeared to be fully developed for commercial, industrial, and residential purposes. Adjacent properties to the north, south, and west were developed as part of the Burbank Airport.

Properties east of the site were used as a parking lot. By 2002, properties south of the site appeared to be vacant land.

5.5 Building Permits

Building permits for the site are issued and maintained at by the City of Burbank Building Department (BBD). Ardent reviewed building permits for the 2940 Hollywood Way and the 3003 North Hollywood Way addresses.

Building permits for the 2940 North Hollywood Way address were dated 1953 through 2011. Building permits dated 1950 through 1953 were for the construction of the former buildings. A permit dated 1972 was issued by the City of Burbank Department of Public Works for the discharge of rinse water from cleaning tanks. A permit dated 1997 was for an excavation associated with a UST removal. Other permits noted in the file were for electrical, plumbing, air conditioning, and fire sprinkler installation.

Building permits for the 3003 North Hollywood Way address were dated 1947 through 2014. Building permits dated 1946 and 1947 were for the construction of the former site buildings. A building permit dated 2013 was for the demolition of the buildings and for the removal of asbestos containing materials. In 2014, a building permit indicated a temporary power pole was installed at the site. At the time of the site reconnaissance, Ardent did not observe a temporary power pole within the site boundary. A power pole was observed on the adjacent facility connected to an office trailer located along the southeastern fence line. Other permits noted in the file were for electrical, plumbing, air conditioning, and fire sprinkler installation permits.

5.6 City Directories

City directories were obtained from EDR for the site and immediate site vicinity. Selected city directories between the years 1920 through 2013 were reviewed. Based on our review, the existing site address of 3003 North Hollywood Way was listed as "Caterpillar Corp" and "Cates BI" in 1985. Pacific Airmotive was listed southeast of the site at 2940 North Hollywood Way from 1956 through 1995. Other properties in the site vicinity were generally listed for commercial purposes.

5.7 Historical Topographic Maps

Historical topographic maps were provided by EDR for review. The maps were dated 1896, 1900, 1901, 1902, 1920, 1926, 1953, 1966, 1972, and 1994. The 1896, 1900, 1901, 1902, 1920, and 1926 maps did not show site specific details. In the 1953 map, portions of the former building are noted. North Hollywood Way was noted east of the site. Lockheed Air Terminal was noted further west, northwest, and south of the site. In the 1966, 1972, and 1994 maps the former site buildings were noted. Various commercial structures were also noted north, west, and south of the site.

5.8 Interviews

Interviews were conducted by Ardent with key site personnel (e.g., past and present owners, operators, and/or occupants) with the objective of obtaining information indicating RECs in connection with the subject property. The following are the site personnel interviewed for purposes of this assessment.

5.8.1 Interview with Owner

The owner of the site was not available for an interview.

5.8.2 Interview with Site Manager

The site manager was not available for an interview.

5.8.3 Interviews with Occupant

The site was vacant land at the time of the site reconnaissance, therefore no occupants were present.

5.8.4 Interviews with Local Government Officials

Representatives of local regulatory agencies were interviewed during completion of this report. The information obtained is presented throughout this report.

5.8.5 Interviews with Others

No other interviews were conducted during this Phase I ESA.

5.9 Previous Reports and Documents

As discussed in Section 3.7, previous environmental reports were provided to Ardent for review.

6 SITE RECONNAISSANCE

The site and site vicinity reconnaissance was performed by Ardent on June 1, 2015. The site reconnaissance involved a walking tour of the site and visual observations of adjoining properties. At the time of the site reconnaissance, the weather was clear and sunny. Selected photographs taken during these activities are included in Appendix A.

At the time of the site reconnaissance, the site was vacant land. The site building had been recently razed. The site surface was covered mostly in concrete and asphalt and some gravel. The three on-site groundwater monitoring wells (MW-1, MW-2, and MW-3) were noted on the east and southeastern portions of the site.

6.1 Use and Storage of Hazardous Substances and Petroleum Products

The use and storage of hazardous substances and petroleum products was not observed during the site reconnaissance.

6.2 Storage and Disposal of Hazardous Wastes

The storage and disposal of hazardous wastes was not observed at the time of the site reconnaissance.

6.3 Unidentified Substance Containers

No unidentified substance containers were observed on site during the site reconnaissance.

6.4 ASTs and Underground Storage Tanks (USTs)

No ASTs or USTs were observed at the site during the site reconnaissance. Cuts in concrete and asphalt areas where former USTs have been documented were observed during the site reconnaissance.

6.5 Evidence of Releases

Evidence of chemical releases on the site, such as odors, stressed vegetation, stains, leaks, pools of liquids, and spills, was not observed during the site reconnaissance.

6.6 Polychlorinated Biphenyls (PCBs)

Historically, PCBs (a group of hazardous substances and suspected human carcinogens) were widely used as an additive in cooling oils for electrical components. Typical sources of PCBs can include electrical transformers. No electrical transformers were noted on the site.

6.7 Suspect Asbestos-Containing Building Materials (ACMs)

The manufacture of most ACMs in the United States was phased out in the 1970s, ending in 1980. Previously manufactured ACMs that were in stock continued to be used through approximately 1981. Some non-friable ACMs are still manufactured (e.g. roofing mastics). In general, buildings constructed after 1981 have a negligible potential to contain friable ACMs and a low potential for most non-friable ACMs, with the exception of roofing materials. Since the site is currently vacant, the presence of ACMs is not likely.

6.8 Lead Based Paint (LBP)

The manufacture of LBP was phased out in approximately 1978. The site is currently vacant land, therefore LBP is not likely present.

6.9 Indications of Water Damage or Mold Growth

Since no structures are present on-site, no visual indications of water damage or mold growth were observed at the site during the site reconnaissance.

6.10 Wastewater Systems

No wastewater systems were observed during the site reconnaissance.

6.11 Stormwater Systems

A storm drain was noted on the southwestern side of the site. No other stormwater systems were noted during the site reconnaissance.

6.12 Wells

The three on-site groundwater monitoring wells (MW-1, MW-2, and MW-3) were noted on the east and southeastern portions of the site.

6.13 Other Subsurface Structures

No other subsurface structures (e.g., sumps, vaults, oil/water separators, and other surface impoundments) were noted during the site reconnaissance.

6.14 Other Issues

No other on- or off-site issues of environmental concern were noted.

7 ENVIRONMENTAL DATABASE SEARCH

A computerized environmental information database search was performed by EDR for this Phase I ESA on April 29, 2015. The database search included federal, state, local, and tribal databases. A summary of the environmental databases searched, their corresponding search radii, and number of noted facilities of environmental concern is presented in Appendix E. In addition, a description of the assumptions and approach to the database search is provided in Appendix F. The review was conducted to evaluate whether the site or properties within the vicinity of the site have been reported as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects.

Four unmapped properties, due to poor or inadequate address information, were identified in the database report. Two of these listings, the San Fernando Valley Groundwater Basin and Pacific Airmotive Corporation, have been identified and are discussed below. Based on the information provided for the remaining properties, and/or the types of databases on which the properties are listed, there is a low likelihood that the environmental integrity of the site has been adversely impacted by these off-site sources.

The following paragraphs describe the databases that contain noted properties of environmental concern, and include a discussion of the regulatory status of the facilities and potential environmental impact to the subject site.

7.1 Federal National Priorities List (NPL): Distance Searched – 1 mile

The NPL is the USEPA's database of uncontrolled or abandoned hazardous waste properties identified for priority remedial actions under the Superfund program. This database includes proposed NPL listings.

The site address is not specifically noted on the EDR report. The site lies within the San Fernando Valley Groundwater Basin. Portions of the San Fernando Groundwater Basin have been impacted with chlorinated solvents due to historical industrial activities. The site lies within the EPA Pacific Southwest, Region 9, Superfund Area 1 (North Hollywood and Burbank) of the San Fernando Valley Groundwater Basin.

As noted in Section 3.7, a Cleanup and Abatement Order was issued in 1992 to three responsible parties of the site and an adjacent property. The responsible parties included Lockheed, AREHLP, and PAC. The Cleanup and Abatement Order was issued by the RWQCB on behalf of the EPA to cleanup and abate VOC-contamination of soil and groundwater associated with the EPA San Fernando Valley Superfund Site. Lockheed has retained liability of the groundwater responsibilities.

7.2 Federal Delisted NPL: Distance Searched – 0.5 mile

This database contains delisted NPL properties under the Superfund program. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the USEPA uses to delete properties from the NPL. In accordance with 40 Code of Federal Regulations (CFR) 300.425. (e), properties may be deleted from the NPL where no further response is appropriate.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

7.3 Federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List: Distance Searched – 0.5 mile

The CERCLIS database contains properties which are either proposed or on the NPL and properties which are in the screening and assessment phase for possible inclusion on the NPL. This database also includes properties listed as No Further Remedial Action Planned (NFRAP).

The site address was not specifically listed. As noted above, the site, along with an adjacent property, have been listed as a responsible party to the San Fernando Valley Groundwater Basin Superfund Site. Portions of the San Fernando Valley Groundwater Basin are listed on the CERCLIS database. Pacific Airmotive at 2940 North Hollywood Way (the Main Facility), and two other facilities located greater than 0.31-mile cross- and down-gradient from the site were listed on the database as NFRAP.

7.4 Federal Corrective Action Report (CORRACTS): Distance Searched – 1 mile

The USEPA maintains this database of Resource Conservation and Recovery Act (RCRA) facilities that are undergoing corrective action. A corrective action order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.

The site was not listed on this database. One facility located approximately 0.51-mile east to southeast of and cross- to downgradient from the site was listed. Based on the distance and direction of this facility from the site, and depth to groundwater, this facility would not be considered an environmental concern to the site.

7.5 Federal Resource Conservation and Recovery Act (RCRA) Treatment, Storage, and Disposal (TSD) Facilities List: Distance Searched – 0.5 mile

The RCRA TSD database (non-CORRACTS) is a compilation by the EPA of facilities that report generation, storage, transportation, treatment, or disposal of hazardous waste.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

7.6 Federal RCRA Generators List: Distance Searched – Site and Adjoining Properties

This list identifies sites that generate hazardous waste as defined by RCRA. Inclusion on this list is for permitting purposes and is not indicative of a release.

The site was listed as “UNC Pacific Airmotive” at 3003 North Hollywood Way as a large generator of hazardous waste. The Main Facility, located at 2940 and 2960 North Holly-

wood Way, listed as Lockheed Martin Corporation and Pacific Airmotive Corporation, were listed as small generators of hazardous waste. No violations were noted. Listing on this database is not indicative of a release.

7.7 Federal Institutional Control/Engineering Control Registries: Distance Searched – Site

These lists identify properties with engineering and/or institutional controls. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on the site. Deed restrictions are generally required as part of the institutional controls.

Although the site is not listed, the San Fernando Valley Groundwater Basin is listed. As noted above, the former site owner/operators are listed as responsible parties to this Federal Superfund Site. As noted in Section 3.7, the Responsible Parties are sharing in the cost for groundwater treatment at specific treatment plants and at well-heads.

7.8 Federal Emergency Response Notification System (ERNS) List: Distance Searched – Site

The ERNS database, maintained by the USEPA, contains information on reported releases of oil and hazardous substances.

Site was not listed on this database.

7.9 Federal Brownfield List: Distance Searched – 0.5 mile

The USEPA Brownfield database, entitled Targeted Brownfield's Assessments (TBA), lists properties for which the USEPA is providing funding and/or technical support for environmental assessments and investigations. The objective of the TBA is to promote cleanup and redevelopment of undesirable properties with environmental issues.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

7.10 State Calsites Database (Calsites) or State-Equivalent CERCLIS: Distance Searched – 1 mile

The Calsites database, also known as the State-equivalent CERCLIS, is maintained by the Cal-EPA DTSC. This database contains information on AWP and both known and potentially contaminated properties. Two-thirds of these properties have been classified, based on available information, as needing no further action (NFA) by the Department of Toxic Substances Control (DTSC). The remaining properties are in various stages of review and remediation to determine if a problem exists. These properties are presented by EDR on the EnviroStor databases.

The site was not listed. The San Fernando Valley Groundwater Basin and Pacific Airmotive Corporation at 2940 North Hollywood Way were listed. These facilities were listed for the groundwater issues previously discussed in Section 3.7.

Fifteen additional facilities were listed; three of them with a regulatory status of closed case. With the exception of one facility, the remaining fourteen properties were located greater than 0.27-mile cross- or downgradient from the site. The single upgradient facility is located approximately 0.67-mile from the site. Based on the distance, direction, depth to groundwater, and/or regulatory status, these facilities would not be considered an environmental concern.

7.11 State Solid Waste Landfill Sites (SWLF): Distance Searched – 0.5 mile

The SWLF database consists of open and closed solid waste disposal facilities and transfer stations. The data comes from the Integrated Waste Management Board's Solid Waste Information System (SWIS) and the SWRCB Waste Management Unit Database (WMUD) database.

Neither the site nor properties located within a 0.5-mile radius from the site were listed on this database.

7.12 State Leaking Underground Storage Tank (LUST) Lists: Distance Searched – 0.5 mile

The LUST information system is obtained from by the SWRCB and the RWQCB (Regional Water Quality Control Board).

The site was not listed on this database. Thirteen facilities were listed on this database within the search radius. Two upgradient facilities located greater than 0.18-mile from the site were listed, although both facilities had a regulatory status of “case closed.” Of the remaining eleven down- to crossgradient facilities, nine had a regulatory status of case closed. The two remaining facilities were listed as Pacific Airmotive at 2940 North Hollywood Way, approximately 350 feet southeast of and downgradient from the site, and Crane Co located approximately 0.48-mile downgradient from the site. Based on the distance, direction, depth to groundwater, and/or regulatory status, these facilities would not be considered an environmental concern to the site.

7.13 State Underground Storage Tank (UST) and Aboveground Storage Tank (AST) Registration List: Distance Searched – Site and Adjoining Properties

UST and AST databases are provided by the SWRCB. Inclusion on these lists is for permitting purposes and is not indicative of a release.

The site and adjoining properties were not listed on these databases.

7.14 State Voluntary Cleanup Programs (VCPs): Distance Searched – 0.5 mile

The State VCP database lists low threat level properties with either confirmed or unconfirmed releases. Project proponents have requested that the DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC’s costs.

Neither the site nor facilities located within the search radius were listed on this database.

7.15 Indian Reservations: Distance Searched – 1 mile

This list depicts Indian administered lands of the United States that have an area equal to or greater than 640-acres. No Indian Reservations were listed within a 1-mile radius from the site. Due to the lack of Indian Reservations within 1-mile of the site, other tribal database listings required by ASTM and AAI were deemed not applicable. These listings would include tribal-equivalent NPL, CERCLIS, Landfill and/or Solid Waste Disposal, LUST, UST and AST Registrations, Institutional Control/Engineering Control Registries, VCPs, and Brownfields.

7.16 Other Non-ASTM and AAI Database: Distance Searched – Site

Other databases were included in the EDR Report, but are not required by ASTM or AAI. Based on our review of these databases, the site was listed on the following databases.

7.16.1 Hazardous Waste Information System (HAZNET) – Site

The information presented in the HAZNET database is obtained from copies of hazardous waste manifests received by the DTSC.

The site was listed on this database as “UNC Pacific Air Motive.” In 1998, hazardous waste manifests were produced during disposal of waste oil. In 2013, a number of hazardous waste manifests were noted, most likely during demolition and clearing of the site. Listing on this database is not indicative of a release.

7.16.2 Facility Index System Identification Program Summary Report (FINDS)

The FINDS database contains information obtained from other regulatory databases. The FINDS database is maintained by EPA.

“UNC Pacific Air Motive” was listed on the FINDS database due to its listing on other regulatory databases.

8 VAPOR ENCROACHMENT CONDITION (VEC)

Ardent completed a VEC study for the site using Tier 1 criteria as recommended by ASTM E 2600-10. The Tier 1 screening identifies surrounding facilities that pose a possible vapor intrusion source to the site based on the results of the Phase I ESA investigations and certain criteria outlined by ASTM. These criteria include a certain distance from the target site (referred to by ASTM as within the “area of concern”); the types of chemicals used (referred to by ASTM as the “chemicals of concern”); and a plume test to determine if the plume associated with a source of contamination is close enough to the site to impact indoor air quality. Based on our review of regulatory records, files, databases, client furnished data, and site reconnaissance activities, the site would be considered a possible risk for vapor intrusion.

As discussed in Section 3.7, soil vapor samples collected in 2014 have shown elevated concentrations of PCE exceeding the CHHSLi screening levels. Based on this information, a soil vapor evaluation should be completed prior to redevelopment of the site.

9 REGULATORY RECORDS REVIEW

The South Coast Air Quality Management District (SCAQMD), RWQCB, Los Angeles County Department of Public Health, Environmental Programs (LACDPH), Los Angeles County Department of Public Works (LACDPW), the Department of Toxic Substances Control (DTSC), the City of Burbank Department of Public Works (BDPW), and the City of Burbank Fire Department (BFD) are the lead regulatory agencies for permitting and regulating USTs, ASTs, LUST cases, and/or facilities that use, store, or generate hazardous waste or hazardous materials. Most agencies file information using addresses. As previously mentioned, the former PAC facility comprised two separate properties consisting of the Main Facility located at 2940 and 2960 North Hollywood Way and the subject property referred to as the Jet Engine Test Cell Facility located at 3003 North Hollywood Way. During file reviews, it appears that a number of permits and regulatory correspondences for the site used the Main Facility address for its mailing address. Therefore, Ardent requested file reviews using both the Main Facility addresses and the Jet Engine Test Cell Facility address. Select copies of regulatory agency records reviewed are provided in Appendix E.

9.1 South Coast Air Quality Management District (SCAQMD)

Records regarding the site were reviewed using the SCAQMD FIND website. The existing site address of 3003 North Hollywood Way was not listed. Permits were noted for the Main Facility address of 2940 North Hollywood Way (Facility ID No. 24755). Following our review of the individual permits in this folder, one permit was noted for the site. The permit, issued on December 18, 1970, was for emissions associated with the operation of "Pratt and Whitney Turbo Prop Engines" tested at 3003 North Hollywood Way. The permit was listed as "inactive."

9.2 Regional Water Quality Control Board, Los Angeles Region (RWQCB)

Ardent searched the SWQCB GeoTracker website for possible files at the RWQCB regarding the site. According to GeoTracker, no files exist for the site address. Information on

GeoTracker for the Main Facility included recent reports regarding soil vapor extraction remediation being completed at that property. No information regarding groundwater investigations or monitoring activities were provided in GeoTracker.

Ardent requested a file review at the RWQCB using the Main Facility and subject site addresses. The file contained combined information for both addresses. Information obtained from the RWQCB file review is discussed in Section 3.7.

9.3 Los Angeles County Department of Public Works (LACDPW)

Records regarding the site were requested from the LACDPW. According to the LACDPW, no records were available for the 2940 Hollywood Way or the 3003 North Hollywood Way addresses.

9.4 Los Angeles County Department of Public Health (LACDPH)

Records regarding the site were requested from the LACDPH. According to the LACDPH, no records were available for the 2940 Hollywood Way or the 3003 North Hollywood Way addresses.

9.5 City of Burbank Department of Public Works (BDPW)

Records regarding the site were requested from the BDPW. According to the BDPW, no records were available for the 2940 Hollywood Way or the 3003 North Hollywood Way addresses.

9.6 City of Burbank Fire Department (BFD)

The BFD is the lead regulatory agency for UST and industrial waste closure activities. Records regarding the site were requested from the BFD. Most of the file information obtained from the BFD was regarding UST and industrial waste closures, hazardous materials inventory, and AST installation permits for the Main Facility.

Very limited information was provided in the BFD file for the site. The 20,000-gallon UST closure report and BFD NFA letter, discussed in Section 3.7, were noted in the file.

9.7 Department of Toxic Substances Control (DTSC)

No records were available for the 2940 Hollywood Way or the 3003 North Hollywood Way addresses on the DTSC Envirostor website.

Ardent also requested records from the DTSC Chatsworth and Cypress facilities. No records were available for the 3003 North Hollywood Way address. DTSC Chatsworth had records associated with the 2940 North Hollywood Way address. Records reviewed were dated 1980 through 1990 and included a memo, a facility drive by inspection, records of communication, and a hazardous waste disposal form. These records were associated with the Main Facility.

10 FINDINGS, OPINIONS AND CONCLUSIONS

Based upon the results of this Phase I ESA the following findings, opinions and conclusions are provided.

10.1 Findings and Opinions

The following presents a summary of findings and opinions associated with this Phase I ESA performed for the subject property, including known or suspect RECs, controlled RECs, and de minimus environmental conditions (i.e., conditions that generally do not present a material risk of harm to public health or the environment).

- The site was used for agricultural purposes or vacant land from at least 1928 through the late-1930s. From at least 1947 through 1996, the site was used for aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. The site buildings were razed in 2013 and the site is currently vacant.
- Groundwater has been reported at the site at depths of approximately 249 feet bgs and flows in a southeasterly direction. The site is located in the San Fernando Valley Groundwater Basin. Portions of the San Fernando Valley Groundwater Basin have been designated as a Federal Superfund Site due to groundwater contamination associated with historical industrial land uses. The site is located within the North Hollywood Operable Unit. The main chemicals of concern include VOCs, namely TCE and PCE, and other chemicals such as hexavalent chromium and 1,4-dioxane.
- In 1992, a Cleanup and Abatement Order was issued to three responsible parties that formerly owned and/or operated businesses at the PAC Facility, these included Lockheed Advanced Development, American Real Estate Holding Limit Partnership, and PAC. Since the Main Facility was used as an aircraft parts fabrication operation includ-

ing the storage and use of chlorinated solvents in degreasers, machining, and plating operations, most of the contaminated materials associated with the Cleanup and Abatement Order has been discovered at the Main Facility. Soil remediation and groundwater monitoring are currently being completed at this property.

- The Jet Engine Test Cell Facility was used for testing aircraft engines. Engines were placed in five test cells for operation, testing, and diagnosis. The engines were fueled by underground pipelines leading from a number of USTs used to store aviation gasoline and jet fuel. These operations included the use of clarifiers, a number of sumps, and fuel pumps.
- In 2013, a Phase I ESA was completed for the site by MWH which included a review of a number of previous soil and groundwater investigations, UST removal activities, and soil remediation. Based on the result of the 2013 Phase I ESA, MWH provided a list of possible environmental concerns and determined whether data gaps existed. MWH subsequently completed a soil and soil gas investigation to fill in the data gaps discovered during the 2013 Phase I ESA. With the exception of PCE discovered in soil gas samples, laboratory results of soil samples collected throughout the site have shown little to no remaining contamination. Based on this information, there is a low likelihood that the residual soil contamination would pose a significant risk to groundwater or be considered a possible human health risk through dermal exposure. PCE was detected in soil gas samples slightly exceeding the CHHSLi. Based on this information, there is a moderate likelihood that a possible human health risk is present due to vapor intrusion.
- As part of the groundwater monitoring activities associated with the Cleanup and Abatement Order, a number of groundwater monitoring wells were installed at the PAC Facility. As part of this monitoring activity, three groundwater monitoring wells were installed on-site, designated MW-1 through MW-3. Monitoring wells MW-1 and MW-2 have been dry since 1991. Although laboratory results of groundwater samples collected from MW-3 have shown concentrations of chlorinated solvents exceeding drinking water standards, the concentrations on-site are much lower than the downgradient sampling results on the Main Facility. Based on the lack of chlorinated solvents discovered on-site in discrete soil samples and the relatively low concentrations discovered in groundwater, there is a low likelihood that the site has significantly contributed to the regional groundwater issues.
- The subject property is part of a Cleanup and Abatement Order associated with a much more contaminated property located approximately 350 feet southeast of the site (i.e. the Main Facility). Due to the on-going soil remediation and groundwater monitoring associated with this property, regulatory closure for soil and/or groundwater has not been obtained for the site.
- The OMP Purchase and Sale Agreement includes a Deed Restriction that apparently has not yet been recorded with the Los Angeles County Tax Assessors. Once recorded, on-site development will be restricted to commercial land use and groundwater shall not be extracted for any purpose other than for chemical monitoring activities.

- Other than the regional groundwater and potential vapor intrusion issues, no other on- or off-site environmental concerns were noted.

10.2 Conclusions

Ardent has performed this Phase I ESA in general conformance with the scope and limitations of the ASTM Practice E 1527-13, ASTM Practice E 2600-10, and the EPA Standards and Practices for AAI, Final Rule (40 CFR, Part 312), for the property located at 3003 North Hollywood Way in the city of Burbank, California. Any limitations or exceptions encountered during completion of this report are stated in Section 1.4. No evidence or indication of RECs, or conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property has been revealed, with the exception of the possible vapor intrusion concern and regional groundwater issues.

11 RECOMMENDATIONS

Based on the results of this investigation, Ardent presents the following recommendations.

- A soil gas evaluation should be completed prior to redevelopment of the site. This task would include a review of building plans with respect to recent soil gas sampling locations and results. Based on this evaluation, additional soil gas points may be needed to provide an adequate data set beneath the proposed building pad. Following collection of the laboratory data, a Human Health Risk Assessment (HHRA) should be completed to assess whether a human health risk is present and whether engineering controls (e.g. a vapor barrier) are needed beneath the proposed building(s) to limit vapor intrusion.
- If the existing groundwater monitoring wells are needed to be abandoned and/or relocated due to proposed construction plans, authorization needs to be obtained from the EPA.

13 QUALIFICATIONS STATEMENT AND SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

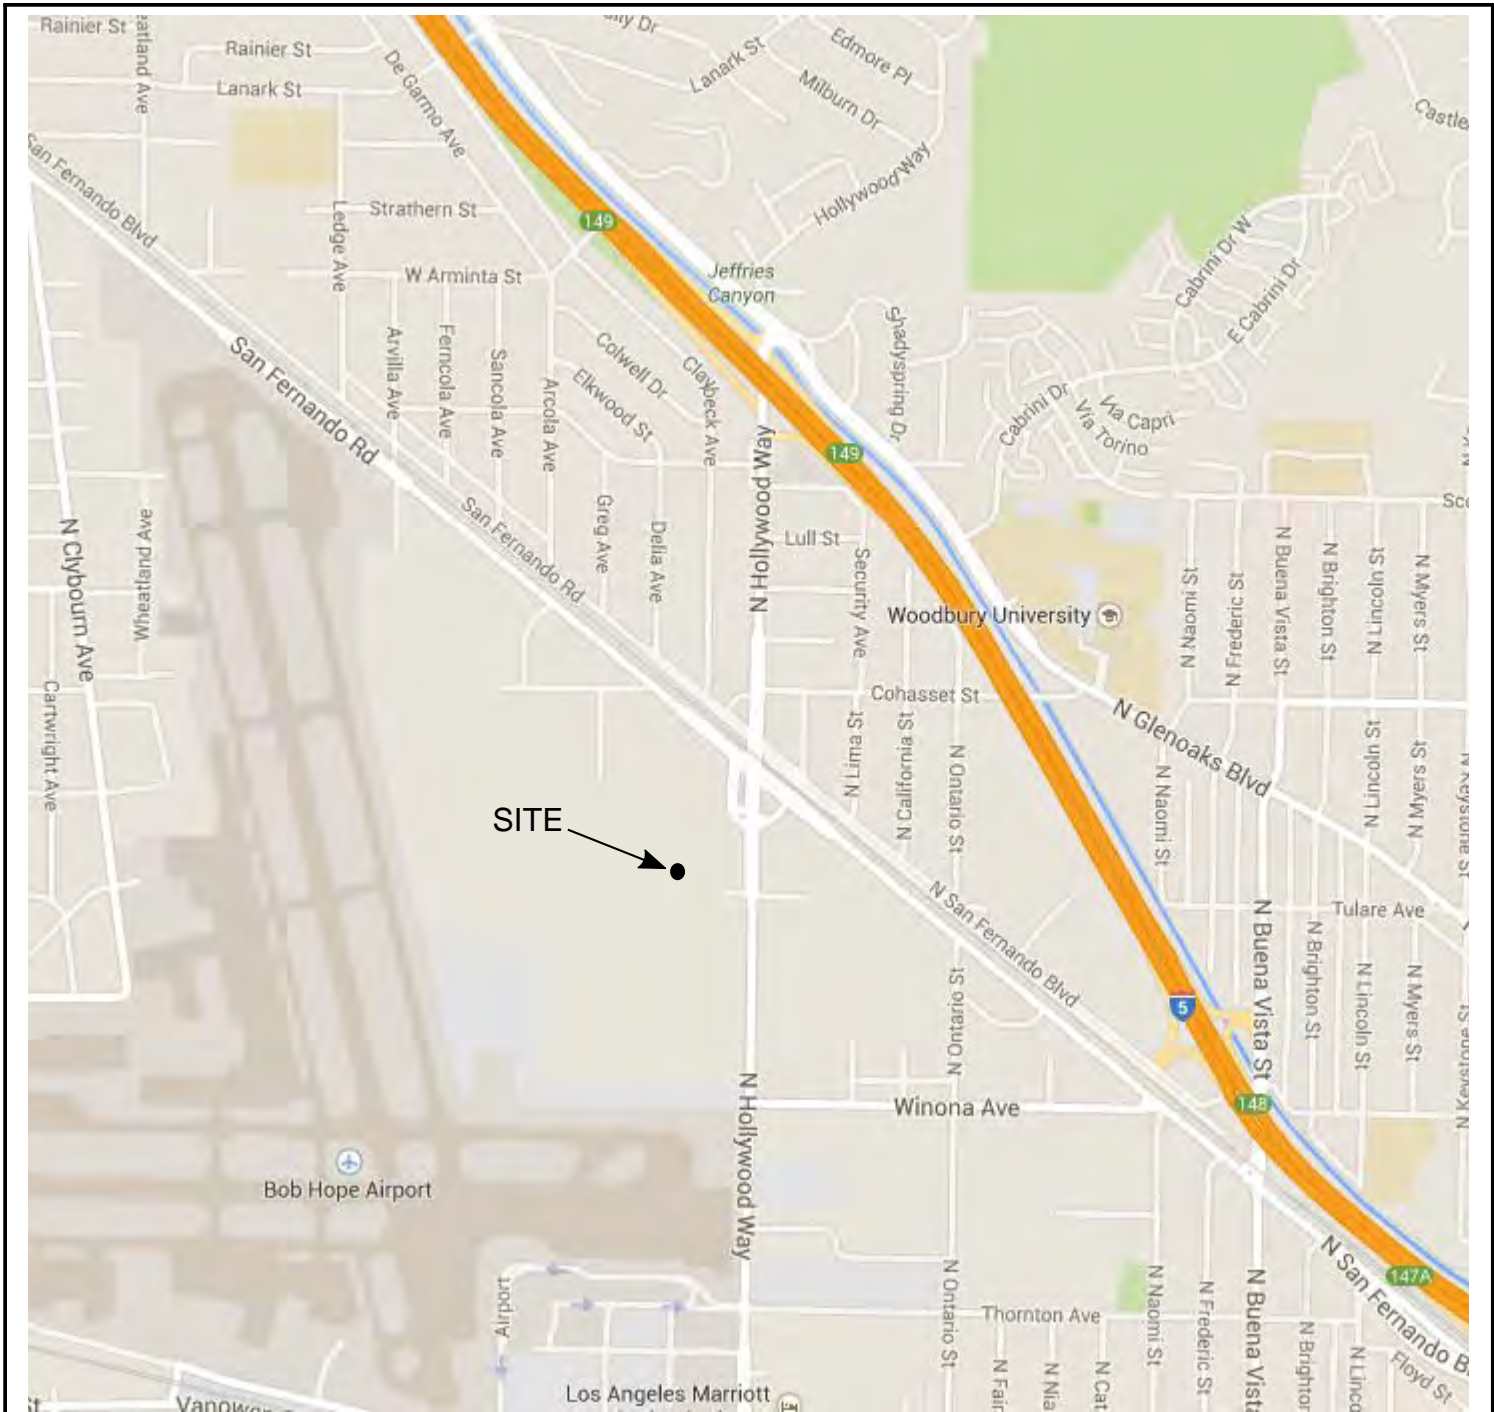

Mr. Paul Roberts states that the Phase I ESA was performed under his direct supervision, and that he has reviewed and approved the report, and the methods and procedures employed in the development of the report conform to the minimum industry standards. Mr. Roberts certifies that Ardent project personnel and subcontractors are properly licensed and/or certified to do the work described herein.

Pursuant to Paragraph 12.13 of the ASTM Standard E1527-13:

I declare that, to the best of my professional knowledge and belief, I meet the definition of *Environmental professional* as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Paul Roberts, P.G.
Principal Geologist

CH2MHILL

NOTES:

- The areas of contamination shown on this map represent generalized two-dimensional approximations based on water quality analysis from Monitoring Wells, Facility Wells, and Production Wells where the top of screened interval is within 50 feet of the water table.
- Due to the possible vertical zonation of contamination, a well within an identified area of contamination may produce water with contamination different than that indicated on this map.
- Areas of contamination are based on the most recent record available for wells sampled.
- Areas outside the colored area of contamination represented on this map may also be contaminated. However, the most recent data available from wells located outside the colored area of contamination on this map are below the detection limit of 2 µg/L.
- The original figure is produced in color. Significant information is lost if copied in black and white.

APPENDIX B
USER QUESTIONNAIRE

PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA) USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the user of the Phase I ESA must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

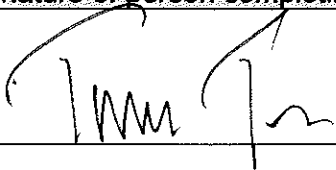

Project Information	
Facility Name and Address:	3003 North Hollywood Way Burbank, California
Reason for the Phase I ESA:	Acquisition
Type of Property:	Commercial
Site Owner and Contact Information:	GE
Site Contact Name and Contact Information:	
Tax Assessors Parcel Number (APN):	2466-011-013

	Yes	No
1. Are you aware of any environmental cleanup liens against the subject property that are filed or recorded under federal, state, or local law?		X
2. Are you aware of any activity use limitations, such as engineering controls (engineered caps, liners, treatment methods, etc.), land use restrictions, or institutional controls (administrative measures restricting groundwater use, construction, or property use, etc.) that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?	X	
3. Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property so that you would have specialized knowledge of the chemicals or processes used by this type of business?		X
4a. Does the purchase price being paid for the subject property reasonably reflect the fair market value of the subject property?	X	
4b. If you conclude that there is a difference in fair market price, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?		
5. Are you aware of any commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as a user,	X	
5 (a) Do you know of the past uses of the property?	X	
5 (b) Do you know of any specific chemicals that are present or were once present on the subject property?		X
5 (c) Do you know of spills or other chemical releases that have taken place at the subject property?		X

5 (d) Do you know of any environmental cleanups that have taken place at the subject property?		x
6. As the user of this ESA, based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of contamination at the subject property?	x	

If you answered "yes" to any of the questions (except 4a) above, please provide more detail below, or attach additional information to this document:

Check previous environmental reports. Past clean-up and ground watering wells. Lockheed responsible party. Land use restriction per the PSA.

TABLE 1
CHRONOLOGY OF SITE INVESTIGATION, REMEDIAL ACTION, AND REGULATORY ACTIVITIES
3003 North Hollywood Way, Burbank, California

1970	TANK REMOVAL: Four to six underground storage tanks (USTs) (Tanks E, F, G, & H) removed from 3003 Hollywood Way, Burbank, CA (Site). (KJC, 1989a)
1983	TANK REMOVAL: Five USTs (Tanks A, B, C, D, & I) removed from the Site. (KJC, 1989a)
1984	SPILL REPORTED: September 23 -- Site reported to Los Angeles Regional Water Quality Control Board (RWQCB) approximately 3,300 gallons of jet fuel accidentally discharged on ground.
1984	INVESTIGATION: Preliminary Contamination Assessment (sample locations C1, D1, L1, R1, A2, E3, F3, G4 collected November 18 & 19) related to the jet fuel discharge. (KJE, 1985a)
1985	INVESTIGATION: Phase II Assessment (vertical and slant sample locations 1, 2, 3, 4, 5, 6, & 7 collected March 18 to 21, 1985) related to the jet fuel discharge. (KJE, 1985b)
1985	REMEDIAL ACTION: Approximately 380 cubic yards (yd ³) of jet fuel-impacted soil was removed from Area 1 to 25 feet below ground surface (bgs) and approximately 600 yd ³ of jet fuel-impacted soil was removed from Area 2 to 30 feet bgs from June 19 to 29, 1985. (KJC, 1989b)
1985	REGULATORY: RWQCB letter to Site noting contaminated soils in Area 1 has been satisfactory completed and no additional work is needed. The letter also noted additional evaluation was needed to determine the vertical extent of soil-impacts in Area 2. (RWQCB, 1985)
1986	INVESTIGATION: Additional Phase III Subsurface Investigation (sample location 8 collected November 19, 1985) to determine vertical extent of soil-impacts in Area 2. (KJE, 1986)
1987	INVESTIGATION: Two groundwater monitoring wells (MW-1 and MW-2) installed in May/June 1987 to evaluate if jet fuel in groundwater in lieu of the RWQCB-requested vadose zone monitoring. (KJC, 1989b)
1989	INVESTIGATION: Two soil sampling locations (SB-17 and SB-18) installed in May/June 1989 to evaluate subsurface impacts near Tank I and near Tanks D, E, F, G, and H, respectively. (KJC, 1989b)
1992	INVESTIGATION: One groundwater monitoring well (MW-3) installed in January 1992 as MW-1 and MW-2 are dry. (KJC, 1992)
1994	REGULATORY: Administrative Order 94-10 was issued to Pacific Airmotive Corporation to perform a partial remedial investigation (RI) at the Site. (USEPA, 1994a)
1994	REGULATORY: U.S. Environmental Protection Agency (USEPA) agrees to exclude the Site from the required partial RI indefinitely, based on the Site's assertions that solvents were not used at the Site. (USEPA, 1994b)
1998	TANK REMOVAL: One UST (Tank 1) and associated piping removed from the Site from September 8 to 10, 1998. Concrete pad for this UST left in place. (AECI, 1998)
1998	AGREEMENT: PAC and Lockheed sign a Settlement Agreement.
1999	REGULATORY: Burbank Fire Department granted No Further Action of the UST (Tank 1). (Burbank Fire Department, 1999)
2003	INVESTIGATION: Asbestos-containing material survey completed on building materials at the Site. (MWH, 2012a)
2005	REGULATORY: USEPA requested quarterly monitoring of MW-3 for four quarters. (USEPA, 2005a and 2005b)
2005	REGULATORY: General Electric (GE) responds to USEPA request for reinstating quarterly sampling at MW-3. GE notes that in January 1999 Lockheed and PAC entered into an agreement that designated PAC as the party primarily responsible for investigation and remediation of soil only and that Lockheed is responsible for groundwater monitoring and reporting (GE, 2005).
2010	REGULATORY: USEPA approved the combination of GE's PAC and Lockheed Martin's BOU Semiannual Groundwater Reports (ARCADIS, 2012).
2011	INVESTIGATION: Lead-based paint survey completed on building materials at the Site (MWH, 2012a)
2011	INVESTIGATION: Phase I ESA with ALTA survey and concrete sampling (MWH, 2012a).

References are included in Section 5.0

				8	11/19/85	35, 45, 55, 65, 75, 80, & 83.3	Soil (vertical boring)	Jet Fuel ^a	KJC	Jet Fuel: 13,000 mg/kg (35' bgs), 8,200 mg/kg (45' bgs), 7,800 mg/kg (55' bgs), 10,000 mg/kg (65' bgs), <1 mg/kg (75', 80', & 83.3' bgs)					
				Storm Drains	Unknown	Two separate storm drains in the parking lot area	None Collected	--	--	--		--	--	--	SG-12 SG-19

**TABLE 2
SITE FEATURE EVALUATION
3003 Hollywood Way, Burbank California**

Site Feature	Location	Constituents of Potential Concern	Description/Status of Feature	Previous Sample Identification	Sample Collection Date	Sample Depth (ft bgs)	Sample Type	Sample Laboratory Analysis	Sample Collection Consultant	Results (From Previous Investigation on Former Facility Features)	Sample Location
Storage/Office Room	Test Cell Nos. 1-4 Building	Unknown	Area that was used for parts storage and an office	None Collected	--	--	--	--	--	--	SG-16
Test Cell No. 1		Jet Fuel/Hydrocarbons	Typical engine testing room.	None Collected	--	--	--	--	--	--	--
Exhaust/Gravel Area		Unknown	Area with a concrete pad that may have stored equipment. Area was the exhaust area for the Test Cell No. 1 engine testing activities.	None Collected	--	--	--	--	--	--	--
Engine Prep Room #1		Unknown	Area that preped engines. Also has a 1' x 1' x 1' concrete floor drain.	None Collected	--	--	--	--	--	--	SG-9
Control Room #1		None	Area that housed electronic equipment to monitor engine testing for both Test Cell No. 1 & 2.	None Collected	--	--	--	--	--	--	--
Storage Room #1		None	Unknown room details.	None Collected	--	--	--	--	--	--	--
Loading Dock		Unknown	Unknown room details.	None Collected	--	--	--	--	--	--	SG-1 SG-2
Test Cell No. 2		Jet Fuel/Hydrocarbons	Typical engine testing room with an exhaust area. Also has a 1' round concrete drain.	None Collected	--	--	--	--	--	--	SG-6
Test Cell No. 3		Jet Fuel/Hydrocarbons	Engine testing room	None Collected	--	--	--	--	--	--	--
Engine Prep Room #2		Unknown	Area that preped engines. Also has a 1' x 1' x 1' concrete floor drain.	None Collected	--	--	--	--	--	--	--
Control Room #2		None	Area that housed electronic equipment to monitor engine testing for both Test Cell No. 3 & 4.	None Collected	--	--	--	--	--	--	--
Storage Room #2		None	Unknown room details.	None Collected	--	--	--	--	--	--	--
Test Cell No. 4		Jet Fuel/Hydrocarbons	Engine testing room with 1' wide x 1' deep concrete trench	None Collected	--	--	--	--	--	--	SG-10
Air Compressor/Water Tank/Air Tank		Hydrocarbons	Aboveground air compressor on gravel area with some oil staining on equipment. Water and air tanks are aboveground and on gravel area.	None Collected	--	--	--	--	--	--	B-16
Test Cell No. 5	Test Cell No. 5 Building	Jet Fuel/Hydrocarbons	Typical engine testing room with exhaust area. Also has three 1' wide x 1' deep concrete trenches and one 1' x 1' x 1' concrete floor drain	None Collected	--	--	--	--	--	--	SG-3 SG-5 SG-4
Test Cell No. 5 Control Room		None	Area that housed electronic equipment to monitor engine testing for Test Cell No. 5. Also had an associated storage room.	None Collected	--	--	--	--	--	--	--
Fuel Pump Room		Hydrocarbons	Room with fuel pumps associated with Test Cell No. 5.	None Collected	--	--	--	--	--	--	B-17

Notes:
 AST - Aboveground Storage Tank
 BTEX - Benzene, Toluene, Ethylbenzene, and Xylenes
 ft bgs - Feet below ground surface
 KJC - Kennedy/Jenks/Chilton
 KJE - Kennedy/Jenks Engineers
 mg/kg - Milligrams per kilogram
 MTBE - Methyl Tert Butyl Ether
 ND - Not Detected
 TRPH - Total Recoverable Petroleum Hydrocarbons
 UST - Underground Storage Tank
 VOC - Volatile Organic Compounds

^aGas chromatography scan using flame ionization detection (GC/FID)
^bGas chromatography utilizing commercial hydrocarbons as standards

CHHSL:				0.6	--	--

Notes:

Samples analyzed using U.S. Environmental Protection Agency Method 8260B-Volatile Organics by GC/MS + Oxygenates/Total Petroleum Hydrocarbons
Results shown reflect constituents that were detected above the practical quantitation limit in at least one sample

DUP - Duplicate sample listed immediately below the primary sample

CHHSLs - California Human Health Screening Levels (OEHHA, 2010)

ft bgs - Feet below ground surface

GC/MS - Gas Chromatograph/Mass Spectrometry

µg/L - Micrograms per liter

TPH - Total petroleum hydrocarbons

< - Not detected above the practical quantitation limit shown

-- - No established standard

1. INTRODUCTION

This Soil Gas and Soil Investigation Report (Report) has been prepared by MWH Americas, Inc. (MWH) on behalf of General Electric Corporation (GE) for the property located at 3003 North Hollywood Way, Burbank, Los Angeles County, California (Site). The Site was formerly used to test air craft engines from 1947 through circa 1990s by Pacific Airmotive Corporation (PAC) and consists of several adjoined buildings that contain engine test cells and control rooms. This soil gas and soil investigation was performed voluntarily by GE to support business planning. The site location is shown on *Figure 1*.

1.1. Project Objectives and Scope of Work

The primary objectives of this investigation were to evaluate and document subsurface conditions related to soil gas and vadose zone soil. The field investigation activities described below were conducted in general accordance with the scope of work presented in the draft Soil Gas and Soil Investigation Work Plan (MWH, 2012b), as requested by GE. The work was conducted in compliance with applicable laws and regulations and consistent with GE protocol.

The quantity and spacing of the soil borings and soil gas locations were reviewed and approved by GE Corporate Environmental Programs. The investigation included shallow soil sampling and chemical analyses at 16 locations (up to 20-feet below ground surface [bgs]), deeper soil sampling and chemical analyses (up to 90 feet bgs) at one location, and soil-gas sampling and chemical analyses at 17 locations (5-feet and 15-feet bgs).

1.2. Previous Investigations, Remediation, and Regulatory History

Since the 1970s, underground storage tank (UST) removal activities, soil and groundwater investigations, and soil remediation efforts have been conducted at the Site with oversight from the Burbank Fire Department, Regional Water Quality Control Board (RWQCB)-Los Angeles, and the United States Environmental Protection Agency (USEPA). The results from the previous sampling investigations, coupled with former Site activities and features, were used to evaluate if data were collected at any of the former Site features and to assess if additional sampling locations or deeper sampling was needed. *Table 1* presents a brief chronology of previous investigations and remedial action activities conducted at the Site. Additional details are provided below.

1.2.1. Soil Investigations

On October 23, 1984, approximately 3,300 gallons of a jet fuel spilled east of Test Cell No. 4, as reported by Airwork Corporation (the previous owner of PAC) to the RWQCB. Soil investigations from 1984 through 1986 were completed to assess the impacts to subsurface soils related to the jet fuel spill and to help identify a fuel supply line as the probable source of jet fuel in the soil (KJC, 1989a). Chemicals detected in soils samples from these investigations included total petroleum hydrocarbons (TPH)-jet fuel (J), toluene, acetone, and methylene chloride. In general, toluene and TPH-J were detected most often at the Site with acetone detected at a low concentration at 40 feet bgs and toluene detected at depths up to 50 feet bgs. Toluene and TPH-J concentrations decreased with depth. TPH-J was detected up to 74 feet bgs and was related to the jet fuel release from tank piping (KJC, 1992).

Following remediation activities in 1985 (further discussed in Section 1.2.4), chemical analysis of soil samples collected on November 19, 1985, beneath the excavated areas indicated that jet fuel was present beneath the bottom of one excavation (Former Area 2 Spill Area on *Figures 2 and 3*). Jet fuel concentrations in soil ranged from 10,000 milligrams per kilogram

(mg/kg) at the base of the excavation (approximately 30-feet deep) to 4,000 mg/kg at a depth of 75 feet in soil boring B-8. Jet fuel was not detected at concentrations greater than method detection limits at depths of 79 and 83 feet bgs.

A subsequent soil investigation was completed in 1989 at the Site to evaluate subsurface impacts at sample locations SB-17 and SB-18 (*Figure 3*). Samples from SB-17 were analyzed for volatile organic compounds (VOCs) and TPH. Samples from SB-18 were analyzed for toluene and TPH. Only toluene was detected (at concentrations ranging from 0.002 mg/kg to 0.034 mg/kg) in soil samples collected from SB-17 and SB-18. These results indicated that significant leakage had not occurred from the former USTs in these two locations (KJC, 1989b).

In February 1994, PAC received Administrative Order 94-10 from the USEPA requiring PAC to perform a Partial Remedial Investigation, to determine the nature and extent of vapor and non-vapor phase contamination in unsaturated zones resulting from releases of hazardous substances at the Site. Both the horizontal and vertical extents of contamination were to be determined (USEPA, 1994a). In a subsequent letter, the USEPA agreed to defer soil gas investigations at the Site based on PAC's assertion that solvents were not used at the Site (USEPA, 1994b).

1.2.2. Groundwater Investigations

Two groundwater monitoring wells (MW-1 and MW-2) were installed in July 1987 to depths of 215 feet bgs to verify the jet fuel release did not impact groundwater. *Figure 3* shows the location of these wells. Both wells were sampled on a semi-annual basis until June 1989. TPH-gasoline, diesel fuel, and jet fuel were not detected in groundwater samples collected during the four semi-annual sampling events. However, trichloroethene (TCE), tetrachloroethene (PCE), and other VOCs were detected in samples collected in both wells. RWQCB requested that well MW-1 and MW-2 remain intact to provide data points for their on-going remedial investigation of TCE and PCE in the groundwater basin that underlies the Burbank area (San Fernando Valley Superfund Site). The two wells were subsequently sampled by others under RWQCB direction. In 1991, these wells were first reported to have no measurable standing water (KJC, 1992).

Groundwater monitoring well MW-3 was installed in January 1992 to an approximate total depth of 285 feet bgs to provide data in addition to existing wells MW-1 and MW-2. *Figure 3* shows the location of this well. No chemicals of potential concern (COPCs) were identified in soil samples collected from boring MW-3. However, groundwater sampling was performed at MW-3 from September 1992 through January 1995 with detected TCE concentrations ranging from 7.8 micrograms per liter ($\mu\text{g/L}$) to 11 $\mu\text{g/L}$. PCE concentrations ranging from 39 to 63 $\mu\text{g/L}$ were reported in the groundwater samples. No evidence was found to suggest chemicals from previous documented releases at the Site had affected groundwater quality underlying the Site (KJC, 1992). Groundwater sampling results were not reported for the years 1996 through 2005 for MW-3 (Tetra Tech, 2010). From March 2007 through September 2010, groundwater levels declined from an elevation of approximately 483 feet above mean sea level (244 feet bgs) to approximately 476 feet above mean sea level (251 feet bgs) (Tetra Tech, 2010). Data in April 2012 shows an elevation of 488 feet above mean sea level (249 feet bgs) (Arcadis US Inc., 2012).

On October 20, 2005, and June 8, 2007, USEPA requested quarterly groundwater sampling of the existing wells at the Site (USEPA, 2005a and 2007). USEPA requested the list of groundwater chemical analyses include VOCs and emerging chemicals; hexavalent chromium, 1,2,3-trichloropropane and 1,4-dioxane (Tetra Tech, 2010). The Lockheed Martin Corporation (LMC) now performs routine groundwater sampling of the three wells at the Site, based on a Settlement Agreement and Complete Mutual Release between UNC PAC and LMC (effective as of March 4, 1998).

1.2.3. Other Investigations

Other investigations include asbestos and lead-based paint sampling, a phase I, concrete sampling, and a geophysical survey, discussed in detail below:

Asbestos and Lead-Based Paint Sampling

On April 24, 2003, asbestos sampling was completed at the Site. A total of thirty-six (36) samples were collected from suspect materials, including: wall paint, door packing, ceiling tile, ceiling tile and roof mastic, boiler jacket insulation, baffle packing, roofing, cooling tower fins, floor tile, and wall board. Laboratory analysis determined that samples had detectable and significant asbestos content in the ceiling tile and roof mastic, boiler jacket insulation, cooling tower fins and panels, and 12" x 12" red floor tile (MWH, 2013).

On February 28, 2011, a survey of suspect asbestos-containing materials (ACMs) and interior painted surfaces (potential lead-based paint [LBP]) that may be disturbed by the planned deconstruction of the Site was completed. The purpose of the survey was to identify ACMs that were not previously sampled, and would require proper removal before commencing deconstruction activities. Sampling and analysis of paint was conducted to determine proper work practices during deconstruction activities. Additional bulk samples inside the buildings were not collected during this survey, as it was determined that the previous survey from 2003 was adequate. Based on the X-Ray Fluorescence tests completed, surface sample results inside the buildings were reported above the current regulatory limit of 1.0 milligrams per cubic centimeter and, therefore, considered LBP by both the U.S. Department of Housing and Urban Development and the USEPA (MWH, 2013).

Phase I Environmental Site Assessment

On February 28, 2011, MWH conducted a Phase I Environmental Site Assessment (ESA) at the Site to identify known/suspected environmental issues. The following historical recognized environmental condition (HREC) was identified at the Site:

- MWH prepared a Technical Memorandum on March 20, 2006, providing a summary of remedial investigations at the Site. According to the memo, in 1984, a jet fuel spill was reported to the RWQCB. Kennedy/Jenks Engineers (KJE) excavated soil from two areas. Samples were collected from a single soil boring to define the vertical extent of the spill. The results indicated the presence of toluene and jet fuel in soils up to 75 feet bgs. Since groundwater was at least 200 feet bgs, it was concluded that the spill would not impact groundwater.

The Phase I ESA revealed no evidence of current recognized environmental conditions (REC) in connection with the Site. De minimis conditions, which generally do not present a threat to human health or the environment, but which could be improved as best management practices, were not observed during the assessment.

The following conditions, not considered RECs, HRECs, or de minimis conditions, were observed during the site visit.

- One 5 foot by 5 foot oil stain was observed outside of Test Cell No. 4 on the loading dock.
- Oil stains were observed on the surface area of the sound baffles observed in Test Cell No. 1 (approximately 157.3 square foot [sf]).
- Oil stains were observed in the Engine Test Cell on the exhaust tube, walls, floor, and other supporting structures.
- Surface stains, each less than 1 sf in size, and cracks in the asphalt, each less than 10 feet with a gap of up to 1 inch, were observed in the parking lot.
- Debris and trash in piles less than 1 sf in size were observed scattered throughout the buildings.

Concrete Sampling

On Tuesday March 29, 2011, concrete sampling was completed at the Site. A total of nine samples were collected from the engine test cells, selected control rooms, and the loading dock area. Sample locations included structural walls and floors. During this sampling event, it was determined that the represented thickness of concrete in the walls was 12 inches, and floors were 8-inches thick. Metals concentrations detected in the concrete samples did not exceed the total threshold limit concentrations values established in Title 22 of the California Code of Regulations, Section 66261.24 and would not be characterized as hazardous wastes. TPH as gas concentrations ranged from non-detectable to 1,600 mg/kg. The greatest TPH as gas concentration was detected in concrete sample CSTC3-6W. TPH as diesel concentrations ranged from non-detectable to 300 mg/kg, with the greatest concentration detected in concrete sample CSETC-1F. The only Semi-Volatile Organic Compounds (SVOCs) detected were 2 methylnaphthalene and phenol in sample CSETC-1F at concentrations of 5.8 and 73 mg/kg, respectively.

Geophysical Survey

On July 18, 2012, a geophysical survey was completed at the Site to delineate the surface trace of detectable steel USTs and subsurface utilities. The survey included use of a Geonics EM-61 high-sensitivity metal detector, a shallow-focus metal detector (M-scope), a ground penetrating radar unit with a 500-MHz antenna, and electromagnetic utility-locating equipment. The results of the geophysical survey included six (6) separate areas with significant anomalies (mostly buried conduits). Due to presence of reinforced concrete footings and other metallic features (for example, stairs, fencing, reinforced bars in the concrete walls), no UST-like signatures were able to be verified or ruled out at the Site. Therefore, the results of the geophysical survey were inconclusive whether or not USTs were present on Site. A copy of the geophysical survey is presented in *Appendix A*.

1.2.4. Soil Remediation Activities

Soil remediation at the Site include UST removals and jet fuel impacted soil removal, discussed in detail below:

UST Removals

Nine USTs were removed in the 1970s and in 1983 (KJC, 1989a). *Table 2* summarized information on the USTs. Historical site records did not contain information regarding the volumes of removed soil or backfilled materials.

Jet Fuel Impacted Soil Removal

Following the approximate 3,300 gallon jet fuel spill east of Test Cell No. 4 in 1984, two areas were identified with elevated jet fuel concentrations during soil investigations in 1984 and 1985 (Former Area 1 and Area 2 Spill Areas on *Figure 2*). Approximately 380 cubic yards (yd³) of jet fuel-impacted soil were removed from Former Area 1 Spill Area to 25 feet bgs, and approximately 600 yd³ of jet fuel-impacted soil were removed from Former Area 2 Spill Area to 30 feet bgs from June 19 through 29, 1995 (KJC, 1986b). Metal shoring was used and possibly left in place along the north and east walls of the Former Area 1 Spill Area excavation and possibly along the north and west walls of the Former Area 2 Spill Area excavation. The excavated cavities from Former Area 1 and Area 2 Spill Areas were backfilled with clean fill material and the surface was asphalt paved. Jet fuel-impacted soil excavations were completed under the direction of RWQCB. No further soil studies with respect to the jet fuel spill at the Site were recommended by RWQCB following the November 19, 1985, soil investigation (KJE, 1986).

UST Tank 1 Removal

A 20,000-gallon UST (aka former UST Tank 1) was removed from the Site on September 10, 1998. Excavated soils did not exhibit any signs of soil contamination (AECI, 1998). A concrete pad below the 20,000 gallon UST was left in-place because of concern arising from a high-pressure fire suppression water line which passed through the excavation area. Five soil samples were collected around the perimeter of the concrete tank pad (*Figure 3*). Concentrations of total recoverable petroleum hydrocarbons (up to 410 mg/kg) and methyl-t-butyl ether (up to 0.013 mg/kg) were detected in the 5 soil samples. In addition, analytical results from stockpile samples from the excavation indicated analytes were less than regulatory levels for classification as hazardous waste. The excavated cavity was backfilled using previously excavated soil and additional fill material was imported from a crushed aggregate stockpile located at the former Lockheed facility directly adjacent to the Site. An asphaltic concrete (blacktop) cap was placed over the backfilled area to match existing conditions.

1.3. Report Organization

The presentation of this report is organized as follows.

Section 1	Introduction, including project objectives, scope of work, previous assessments, and report organization
Section 2	Site background, including site description and physical setting
Section 3	Site investigation program, including preliminary field and health and safety activities, field sampling activities, laboratory analysis, site restoration, and investigation-derived waste management
Section 4	Results of the site investigation, including local geologic conditions, data screening criteria, and analytical results
Section 5	List of references cited
Section 6	Limitations to this report

2. SITE BACKGROUND

2.1. Site Description

The Site is approximately 0.69 acres and includes adjoined buildings containing engine test cells and associated exhaust areas, control rooms, loading docks, sumps, a clarifier, floor and trench drains, groundwater monitoring wells, aboveground storage tanks, and an asphalted parking area (*Figure 2*). The buildings at the Site comprise a total of 12,721 square feet with 18 to 40 foot high walls (MWH, 2013). Buildings at the Site are constructed of concrete and cinderblock. Most of the equipment in the engine test cells has been removed except for the baffles and supporting structures for exhaust tubes. A chain link fence currently surrounds the Site for security purposes as the Site is currently vacant and is no longer used.

2.2. Site Background

The Site was formerly occupied by PAC and its successors, which had been in business since 1928. According to an internal memo (Sullivan, 2003), the facility was used from 1947 through 1996. The memo also notes that in 1985, PAC was purchased by UNC Resources that included the Site and another nearby property (2940 North Hollywood Way) from Purex Industries. Historical site activities included aircraft engine maintenance and repair, jet engine overhaul for commercial and military aircraft, reworking and retooling of worn engine parts, and jet engine testing. In 1997 GE acquired an entity, which subsequently acquired the corporate parent of UNC PAC (USEPA, 2005c). Consequently PAC is now an indirect, wholly-owned subsidiary of GE.

2.3. Physical Setting

2.3.1. Site Vicinity Topography and Hydrology

The Site is located in the San Fernando Valley at an elevation of 713 feet above mean sea level. The Site is situated on a broad gentle alluvial pediment that slopes generally to the southwest at less than one percent. The surficial geology in the San Fernando Valley consists of Quaternary-age alluvium (primarily sand, clay, and gravel) shed from the surrounding mountains (Dibblee, 1991). Surface water drains eastward-southeastward via the Los Angeles River and its tributaries through most of the San Fernando Valley, and then flows southward through the Los Angeles Narrows. The Burbank Western Wash, concrete-lined channel, which originates in the Hansen-La Tuna Canyon area, a tributary to the Los Angeles River, is located approximately one mile to the southeast (USGS, 2012). Storm water runs off the Site by sheet flow toward the south side of the Site to a storm drain and also east along Tulare Avenue leading to Hollywood Way (MWH, 2013).

2.3.2. Regional Geology and Hydrogeology

The Site is located in the western portion of the Transverse Range Geomorphic Province, on the northwestern structural block of the Los Angeles physiographic basin, within the southeastern portion of the San Fernando Valley. The Verdugo Mountains, a surface expression of the Verdugo Faults within the San Fernando Valley, are located approximately one mile northeast of the site. The San Fernando Valley contains up to 2,000 feet of alluvial sediments resting on mid-Tertiary marine sedimentary beds and volcanics. The Site is underlain by Quaternary age, medium to coarse-grained sand and gravel with lesser amounts of silt and clay) derived from crystalline and sedimentary rocks in the surrounding mountains (Yerkes and Campbell, 2005).

The San Fernando Valley is an east-west trending structural syncline measuring approximately 23 miles in length and 12 miles in width.

The Site is located in the east-central portion of the San Fernando Valley Groundwater Basin (Basin), which underlies the San Fernando Valley and is the major groundwater basin of the Upper Los Angeles River Area. The Basin is an unconfined aquifer and is bounded on the north and northwest by the Santa Susana Mountains, on the north and northeast by the San Gabriel Mountains, on the east by the San Rafael Hills, on the south by the Santa Monica Mountains and Chalk Hills, and on the west by the Simi Hills. The Basin is filled with Sediments of recent (Younger Alluvium, Holocene age) and Older Alluvium (Pleistocene age) underlie the Site, and are composed primarily of sands and gravels derived from igneous and metamorphic rocks eroded from the San Gabriel and Verdugo Mountains (DWR, 2004).

The Basin consists of 145,000 acres and comprises over 90% of the total San Fernando Valley fill. The San Rafael Hills, Verdugo Mountains, and San Gabriel Mountains bound the Basin on the east and northeast. The northern border of the Basin is defined by the San Gabriel Mountains and the eroded south limb of the Little Tujunga Syncline which separates it from the Sylmar Basin. Regional geologic maps published by Dibblee (1991) and Hitchcock and Wills (2000) identify the Verdugo Fault as the basin bounding fault which is located on the northeast and east sides of the Basin.

Groundwater flows generally from the edges of the Basin toward the middle of the Basin, then beneath the Los Angeles River Narrows into the Central Subbasin of the Coastal Plain of Los Angeles Basin. In the northeastern part of the Basin, groundwater moves from the La Crescenta area southward beneath the surface of Verdugo Canyon toward the Los Angeles River near Glendale, whereas the groundwater in the Tujunga area flows west following the Tujunga Wash around the Verdugo Mountains to join groundwater flowing from the west following the course of the Los Angeles River near Glendale (ULARAW, 1999). Flow velocity ranges from about 5 feet per year in the western part of the basin to 1,300 feet per year beneath the Los Angeles River Narrows (ULARAW, 1999).

Locally, the groundwater flow direction varies due to natural conditions such as faults, buried alluvial fans, and washes. Extensive groundwater extraction for consumptive use, groundwater recharge, and environmental cleanup also creates local variations in flow direction and are dependent on rates of extraction/injection and screened interval of the wells. CH2M Hill (2004) suggests that extensive extraction by groundwater contamination projects in the vicinity of the Site induces a local groundwater flow direction to the north under pumping conditions. Recent data in April 2012 shows a groundwater elevation at the Site of 488 feet above mean sea level (249 feet bgs) with a general flow direction to the southeast (Arcadis US Inc., 2012).

The Basin is part of the USEPA Pacific Southwest, Region 9: Superfund Area 1 (North Hollywood and Burbank), an area of contaminated groundwater (primarily chlorinated VOCs) covering approximately 4 square miles beneath the North Hollywood section of the City of Los Angeles and the City of Burbank. The Basin has undergone intensive investigation for assessment and remedial clean-up of chlorinated solvent contamination. The regional chlorinated contamination occurred from releases at aerospace manufacturing plants and other facilities which operated in the eastern portion of the Basin for the last 50 years.

Potable water for the city of Burbank is supplied by a combination of Metropolitan Water District imported water from the State Water Project and the Colorado River supplies and groundwater from local wells. The groundwater is treated for the removal of VOCs at the Burbank Operable Unit (BOU) prior to entering the distribution system (BWP, 2011).

2.4. Site Feature Evaluation

The results from the previous sampling investigations and former feature removal activities were used to evaluate if data were collected at any of the former Site features and to assess if additional sampling locations or deeper sampling was needed. Other than the jet fuel spill soil investigations and the 1989 soil investigation (i.e., SB-17 and SB-18), none of the other former or current Site features were previously investigated for possible impacts to the subsurface. *Table 2* presents a summary of the 42 former Site features/building rooms, COPCs, previous sampling investigation locations and investigation results in and around some Site features.

As shown in *Table 2*, of the 42 former Site features, 29 were determined to warrant assessment, based on features, activities, and/or chemical usage at each feature. One to two soil gas and/or soil borings were proposed to assess soil immediately beneath these 29 features.

3. SITE INVESTIGATION PROGRAM

3.1. Summary

Site investigation activities included utility clearance, soil gas and soil sampling, and investigation derived waste (IDW) management. Fieldwork was conducted from October 15 through October 26, 2012, by trained and experienced personnel in accordance with industry standards and applicable laws and regulations. The field activities were completed in general accordance with the draft Work Plan (MWH, 2012b), the Site-Specific Health and Safety Plan (MWH, 2012a), and under the direct supervision of a California Professional Geologist. The site layouts with sampling locations are shown on *Figures 4 and 5*.

3.2. Utility Clearance

Prior to field activities, Underground Service Alert (USA) was notified prior to drilling at each borehole location, to mark subsurface utilities that may enter the Site from public easements (Ticket No. B22830042). Facility maps were reviewed for on-Site utility locations. In addition, geophysical clearance of subsurface utilities in the general vicinity of each boring location was completed on October 15, 2012, by GeoVision, a geophysical company subcontracted by MWH. The geophysical survey was completed to identify known and potentially unknown subsurface structures and readily identifiable subsurface utilities. Final sampling locations were modified based on field observations, USA, and geophysical clearances. In addition, each boring was hand augered to a depth of 5-feet below ground surface to identify potential unknown underground utilities that were not detected during the geophysical survey, as an added precaution.

3.3. Soil Gas Investigation

Seventeen (17) soil gas sampling locations were installed at the locations shown on *Figure 4* to evaluate potential subsurface impacts. [Note: Originally 19 soil gas sampling locations were proposed, however, sampling could not be completed at locations SG-6 and SG-10 as identified in the draft Work Plan (MWH, 2012b) due to drilling refusal.] The drilling and subsurface soil sampling was completed by BC² Environmental Corp (BC²), a licensed drilling contractor subcontracted by MWH. *Table 3* presents the soil gas sampling program. Soil gas sampling intervals were selected to particularly assess the potential for constituents of concern in the vadose zone. The soil gas sampling locations were placed next to Site features, areas of potential concern, or for general spacing purposes. Soil gas probe installation and sampling were conducted in accordance with the Department of Toxic Substance Controls (DTSC)/RWQCB-Los Angeles and -San Francisco Advisory – Active Soil Gas Investigations (Advisory) (DTSC/RWQCB, 2012). The soil gas investigation activities are described further below.

3.3.1. Soil Gas Probe Installation and Sampling

Soil gas probes were installed using a hollow stem auger drill rig or via hand auguring based on accessibility to the sampling location. BC² installed the soil gas probes, and Jones Environmental Laboratories (JEL) a California state-certified mobile geochemical laboratory collected soil gas samples from the soil gas probes and analyzed the soil gas samples. Sixteen (16) soil gas probes were installed by advancing probes to 5-feet and 15-feet bgs. One soil gas location, SG-9, was hand augered to a depth of 7.5 ft bgs, less than the proposed 15 ft bgs, due to drilling refusal. In addition, one location (SG-15) was located

adjacent to a 6-foot deep clarifier, so an additional 10-foot soil gas sample was collected as well as the 5-foot and 15-foot deep samples.

A nested multi-depth soil gas probe system was installed at each location in the subsurface. A separate stainless-steel vapor probe tip with attached ¼ inch Nylaflow sampling tubing was placed at each sample depth in the subsurface. Approximately 12-inches of filter pack (clean, coarse silica sand) was poured around the perforated section of the tubing to allow for diffusion of soil gas. Approximately 12-inches of dry granular bentonite was added above the filter pack. Hydrated granulated bentonite was placed above the dry granular bentonite to seal the probe from subsequent probes installed above it within the same borehole. A period of 30 minutes was allowed for the bentonite chips to hydrate prior to placement of the next multi-depth location and filter pack interval. The next probe was set at the desired depth, and the process was repeated up to the ground surface. The remaining annulus was filled with a hydrated bentonite seal to seal off the borehole from ambient air during sampling. Each probe/tubing assembly was attached to a ¾ inch or 1-inch diameter rigid PVC riser pipe for stability. Tubing associated with each interval was tagged and labeled at the surface.

To allow for subsurface conditions to equilibrate and vapor concentrations to stabilize, a shut-in, leak, and purge volume test was completed at least 48 hours following installation, following Section 4 of the 2012 Advisory. No significant rain event of 0.5 inches or greater of rain was recorded during or following 5 days after the soil gas probe installation or sampling, and the area was free of pooled water. Soil gas samples were then collected from the probes, using a glass sampling syringe, for analysis following specified quality assurance/quality control criteria identified in the Advisory. Samples were entered into chain-of-custody and analyzed using chemical testing equipment in the onsite mobile laboratory. Glass syringes were decontaminated in between sample collections.

Soil was characterized according to the Unified Soil Classification System as presented in American Society for Testing and Materials Standard D 2488 and classified by color using a Munsell Color Chart. Geologic logs for the soil gas locations are presented in *Appendix B*.

Soil samples were field screened using a photoionization detector (PID) to monitor the presence and approximate concentration of organic vapors in soil headspace samples. The headspace samples were prepared by disaggregating a portion of soil sample in a re-sealable plastic bag, letting the headspace equilibrate within the bag for 5 to 10 minutes, then measuring the organic vapor concentration within the headspace using the PID.

Once soil gas sampling was complete, probes were abandoned in place by forcing bentonite grout into the sample tubing, removing a portion of the bentonite surface seal, and backfilling with cement mortar or asphalt to match existing ground surface.

3.3.2. Soil Gas Laboratory Analysis

Laboratory analyses of soil gas samples were completed in general accordance with draft Soil Gas and Soil Investigation Work Plan (MWH, 2012b) and the DTSC/RWQCB Advisory (DTSC/RWQCB, 2012). Soil gas sampling and analysis was completed by JEL onsite mobile laboratory. Soil gas samples from each sampling location were analyzed for VOCs and TPH Gasoline Range Hydrocarbons using USEPA Method 8260. USEPA Method 8260 was selected as naphthalene was not a COPC nor were the results to be used for a future risk assessment.

3.4. Soil Investigation

Seventeen (17) soil borings (B-1 through B-17) were completed at the locations shown on *Figure 5* to further evaluate subsurface conditions. *Table 3* presents the soil sampling program. Soil sampling intervals were selected to assess the potential for COPCs in the vadose zone. Soil investigation activities are described further below.

3.4.1. Soil Sampling

Soil borings were advanced using a slide hammer sampling device or a hollow stem auger drilling rig depending upon sample location. Soil samples were collected using stainless steel sample rings. Soil samples were retained for laboratory analyses from the unsaturated zone. Once the soil samples were removed from the sampler, soil was collected by manually pushing three En Core® sampling devices into one of the sample retainers for VOCs analysis. The remaining soil sample was capped at the ends of the sample liners using Teflon sheets and caps. Soil samples were then labeled, placed in a resealable plastic bag, entered into chain-of-custody protocol, and placed in an ice-chilled cooler. The samples were delivered to Calscience Environmental Laboratories, Inc. (Calscience) of Garden Grove, California, a state-certified laboratory for chemical analysis. Sample handling and chain-of-custody procedures were completed in general accordance with USEPA SW-846 protocol.

Soil was characterized according to the Unified Soil Classification System as presented in American Society for Testing and Materials Standard D 2488 and classified by color using a Munsell Color Chart. Geologic logs for the soil borings are presented in *Appendix B*.

Soil samples were field screened using a PID to monitor the presence and approximate concentration of organic vapors in soil headspace samples. The headspace samples were prepared by disaggregating a portion of soil sample in a resealable plastic bag, letting the headspace equilibrate within the bag for 5 to 10 minutes, then measuring the organic vapor concentration within the headspace using the PID.

The soil borings were abandoned by filling with tremied bentonite grout to just below surface grade, and then capped at the surface with concrete, asphalt, or soil to match the existing surface grade.

The soil sampling equipment was cleaned with a non-phosphate detergent, rinsed with tap water, twice-rinsed with deionized water, and air dried. Drill rig augers were steam cleaned before and between borings. The equipment was handled in a manner intended to prevent cross-contamination between sampling locations.

3.4.2. Soil Sample Analytical Methods

Soil samples were chemically analyzed for the following, as summarized in *Table 3*:

- VOCs using USEPA Method 8260B and using USEPA 5035 EN CORE™ – preparation method
- SVOCs using USEPA Method 8270C
- Polychlorinated Biphenyls (PCBs) using USEPA Method 8082
- Title 22 Metals using USEPA Method 6020
- TPH-carbon chain using USEPA Method 8015

3.5. Investigation Derived Waste (IDW) Management

Soil cuttings, decontamination water, used personal protective equipment, and disposable sampling equipment generated during field activities were appropriately stored at the Site in labeled UN-approved 55-gallon steel drums. GE properly transported and disposed of the IDW, using GE's licensed contractor, at an off-site disposal facility following receipt of sample results (see *Appendix C* for waste manifests).

3.6. Quality Assurance/Quality Control (QA/QC)

The overall QA/QC objective for field activities and laboratory analyses was to produce data of sufficient quality to support an evaluation of the environmental conditions. Standard operating procedures were conducted so that known and sufficiently acceptable levels of accuracy, precision, completeness, representativeness, and comparability were achieved for the data. All of the soil and soil gas data collected were validated and presented in the report summarizing the activities and is presented in *Appendix D*.

3.6.1. Field QA/QC Samples

To verify laboratory results, duplicate soil and soil gas samples, were collected at an approximate frequency of one sample for every 10 primary samples collected. One equipment rinsate sample was collected each day in the field to verify decontamination procedures by pouring laboratory-grade, organic-free water onto decontaminated sampling equipment and into sample containers. Duplicate and equipment rinsate samples were analyzed for the same constituents as their primary samples. In addition, one trip blank sample was sent to the lab with every cooler that contained samples for VOC analysis. Trip blanks were analyzed for VOCs.

3.6.2. Laboratory QA/QC

EPA mandated sample holding times and preservation were observed. Specific requirements were followed, including field and reagent blanks, calibration check standards, matrix-spiked duplicates (MSD), total recoveries, and laboratory QC samples.

3.6.3. Data Management and Adequacy Assessment

A Level II data adequacy procedure was utilized to obtain an adequate level of confidence in the data presented. A Level II data review includes a cursory review of laboratory data for precision, accuracy, representativeness, completeness, and comparability. QC data was reviewed for laboratory instrument precision and accuracy from laboratory control samples, duplicate recoveries, relative percent differences, matrix spike (MS)/MSD sample recoveries, and relative percent differences. Samples were evaluated for representativeness of laboratory and site conditions based on review of method and field blanks. The results were reviewed for completeness and comparability based on the analytical methods used, sample preservation and holding time criteria specified for each method, and the laboratory reporting limits.

3.6.4. Data Adequacy Summary

Results were reviewed in accordance with the appropriate methods listed above. In addition, the USEPA Contract Laboratory Program National Functional Guidelines for Organic (USEPA, 2008) and Inorganic (USEPA, 2004) Data Review were used to

provide overall guidance for the validation process. The data review included an evaluation of the following quality control parameters based on standard performance criteria presented in these documents.

- Analytical holding times/sample preservation.
- Method blanks and field blanks
- Surrogate percent recovery
- MS/MSD sample performance
- Field duplicate comparison
- Detection limits

4. SITE INVESTIGATION RESULTS

The following sections describe the Site geology and results of laboratory analyses for soil and soil gas samples collected during the investigation. The soil and soil gas analytical sampling summary is presented in *Table 3*. Soil gas and soil chemistry laboratory report results are presented on a CD in *Appendix E*. Analytical results are presented with data qualifiers and are flagged, as appropriate (e.g., J denotes an estimated value detected above the method detection limit, but below the reporting limit) where analytical results are presented throughout this section.

4.1. Local Geological and Hydrogeological Conditions

The subsurface soils at the Site consist of five identifiable units consisting of thick accumulations of sands, gravel, cobbles and boulders with minor amounts of silt and clay. The uppermost unit encountered during these investigations is characterized by poorly-graded to well-graded sands and sandy gravel interbedded with minor silty sand units to an approximate depth of 75 feet bgs. Based on literature and other's reports, the second unit consists of cobbles and boulders in a gravel-sand matrix to an approximate depth of 120 feet bgs. The third unit includes gravel and sands interlayered with minor silty sand units to approximate depth of 245 feet bgs. The fourth unit consists of an approximately 15 to 20 foot thick layer of cobbles and boulders underlain by a fifth unit of gravel and sand of unknown thickness. Each unit contains relatively minor, fine-grained, discontinuous strata (KJC, 1992).

The two main water-bearing units underlying the Site consists of Younger Alluvium (Holocene age) and Older Alluvium (Pleistocene age) with a combined local thickness exceeding 1,000 feet (KJC, 1992). The subsurface soils encountered during the site investigation appeared consistent with the description of the Younger Alluvium, to the total depth explored (90 feet bgs). Groundwater flow has been historically toward the southeast. Data available (April 2012) show a groundwater elevation at the Site of 488 feet above mean sea level (249 feet bgs) with a general flow direction to the southeast (Arcadis US Inc., 2012).

Based on the lithologic descriptions noted on the soil gas and soil investigation boring logs, the geology encountered is similar to the historical geology noted above. Generally, poorly-graded to well-graded sands and sandy gravel interbedded with minor silty sand units to an depth of 90 ft bgs were encountered. During the soil gas and soil investigation, groundwater was not encountered during drilling at depths up to 90 ft bgs. Geologic logs for the soil gas and soil borings are presented in *Appendix B*.

4.2. Screening Criteria

The detected concentrations in both soil and soil gas were compared against various Federal and/or State standards, as tabulated in *Tables 4 through 9*. Descriptions of each of these criteria are provided below:

- **Soil Gas:** Detected soil gas concentrations were compared to published risk-based screening levels for industrial properties.
 - California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) California Human Health Screening Levels (CHHSLs), *Table 3 - Soil-Gas-Screening Numbers for Volatile Chemicals below Buildings Constructed Without Engineered Fill below Sub-slab Gravel* (OEHHA, 2010).

- **Soil:** Detected soil concentrations were compared to USEPA Regions 3, 6, and 9 RSLs for VOCs, SVOCs, metals and PCBs (USEPA, 2012), the California background concentrations for metals (Bradford et al, 1996), and the RWQCB maximum soil screening levels (SSLs) for TPH (RWQCB, 1996).
 - EPA RSLs are risk-based tools for evaluating and cleaning up contaminated sites using the industrial scenario.
 - Background Concentrations of Trace and Major Elements in California Soils documents the comprehensive, scientific database on anthropogenic and natural causes of elevated trace element concentrations in California soils. Detected metal concentrations were compared to background concentrations from samples noted in the report. The closest samples in the report to the Site are from the San Bernardino Area.
 - Determination of a Southern California Regional Background Arsenic Concentration in Soil documented by the DTSC determined background levels for arsenic in Los Angeles County. Detected arsenic concentrations were compared to the upper-bound background arsenic concentration of 12 mg/kg (Chernoff et al., 2008).
 - RWQCB SSLs are numerical soil screening levels used to evaluate the need for remediation of soils impacted by petroleum hydrocarbons, based on soils greater than 150 feet above groundwater, since groundwater is approximately 245 feet bgs.

4.3. Analytical Results

4.3.1. Soil Gas Chemistry Results

This subsection describes soil gas analytical results for VOCs and TPH Gasoline Range Hydrocarbon analyses. Soil gas analytical results are tabulated in *Table 4* for detected constituents reported above analytical practical quantitation limits. Thirty-nine (39) primary and duplicate soil gas samples were collected in 17 locations during the soil gas investigation.

- PCE was detected in 23 of the 39 soil gas samples analyzed at concentrations exceeding the CHHSL of 0.6 µg/L. PCE concentrations in soil gas are presented graphically on *Figure 6*.
- 1,1,2-Trichloro-trifluoroethane (Freon 113) was detected in 3 samples collected from SG-15 and SG-17 at concentrations ranging from 0.041 to 0.071 µg/L (no established CHHSL for Freon 113).
- TPH Jet A was detected in two soil gas samples, SG-18-5 (at 5 ft bgs) and SG-19-5 (at 5 ft bgs) with concentrations of 12.4 and 14.2 µg/L, respectively, (no established CHHSL for TPH Jet A).

Out of 64 chemicals in the screening, only PCE exceeded respective screening levels.

4.3.2. Soil Chemistry Results

The following subsections describe soil analytical results for VOCs, SVOCs, TPH, polychlorinated biphenyls (PCBs), and Title 22 metals analyses. Forty-one (41) primary and duplicate soil samples were collected from 17 locations during the soil investigation. The respective sample locations are shown on *Figure 5*.

4.3.2.1. VOCs

Soil chemistry results for VOCs are tabulated in *Table 5* for detected constituents reported above analytical method detection limits and are briefly summarized below:

- Acetone was detected in two samples from B-07 at a concentration of 0.081 milligrams per kilogram (mg/kg) and B-10 at a concentration of 0.072 mg/kg.
- Benzene was detected in 11 samples at concentrations ranging from 0.001 to 0.02 mg/kg.
- 2-Butanone in one sample from B-07 at a concentration of 0.026 mg/kg.
- Ethylbenzene was detected in two samples from B-03 and B-07 at concentrations of from 0.0016 and 0.0069 mg/kg, respectively.
- o-Xylene was detected in five samples at concentrations ranging from 0.0011 to 0.013 mg/kg.
- p/m-Xylene was detected in five samples at concentrations ranging from 0.0025 to 0.03 mg/kg.
- p-Isopropyltoluene was detected in one sample from B-07 at a concentration of 0.001 mg/kg.
- Styrene was detected in one sample from B-07 at a concentration of 0.0042 mg/kg.
- PCE was detected in nine samples at concentrations ranging from 0.0011 to 0.011 mg/kg.
- Toluene was detected in eight samples at concentrations ranging from 0.001 to 0.037 mg/kg.
- 1,2,4-Trimethylbenzene was detected in one sample from B-07 at a concentration of 0.012 mg/kg.
- 1,3,5-Trimethylbenzene was detected in one sample from B-07 at a concentration of 0.0022 mg/kg.

No other constituents were reported above analytical method detection limits in the 38 soil samples chemically analyzed for VOCs. Of the 41 primary and duplicate soil samples analyzed for VOC analysis, none were reported at concentrations exceeding respective RSLs for industrial land use.

4.3.2.2. SVOCs

Soil chemistry results for SVOCs are tabulated in *Table 6* for detected constituents reported above analytical method detection limits. Only dimethyl phthalate was detected in two samples, B-02 at 15 ft bgs and B-11 at 0.5 ft bgs, at concentrations of 0.59 mg/kg and 0.61 mg/kg, respectively. There is no established RSL for Dimethyl Phthalate. No other constituents were reported above analytical method detection limits in the 41 soil samples chemically analyzed for SVOCs.

4.3.2.3. TPH

Soil chemistry results for TPH are tabulated in *Table 7* for detected constituents reported above analytical method detection limits and are briefly summarized below:

- TPH-gasoline range organics (Carbons C₄ – C₁₂) were detected in two of the 38 samples at concentrations ranging from 50 to 860 mg/kg, below the SSL of 1,000 mg/kg.
- TPH-diesel range organics (Carbons C₁₃ – C₂₃), were detected in seven of the 38 samples at concentrations ranging from 7.7 to 790 mg/kg, below the SSL of 10,000 mg/kg.

- TPH-motor oil range organics (C₂₃ – C₄₀), were detected in 20 of the 38 samples at concentrations ranging from of 5.1 to 1,100 mg/kg, below the SSL of 10,000 mg/kg.

Of the 41 primary and duplicate soil samples analyzed for TPH analysis, none were reported at concentrations exceeding respective SSLs.

4.3.2.4. PCBs

Soil chemistry results for PCBs are tabulated in *Table 8* for detected constituents reported above analytical method detection limits. Aroclor-1254 and -1260 were detected in one sample, B-10 at 5 ft bgs at concentration of 0.6 and 0.052 mg/kg, respectively, below the RSL of 740 mg/kg. No other constituents were reported above analytical method detection limits in the 41 soil samples chemically analyzed for PCBs.

4.3.2.5. Metals

Soil chemistry results for metals are tabulated in *Table 9* for detected constituents reported above analytical method detection limits and are briefly summarized below:

- Antimony was not reported above analytical method detection limits in any of the 38 samples.
- Arsenic was detected in 38 samples at concentrations ranging from 0.757 to 6.38 mg/kg.
- Barium was detected in all samples at concentrations ranging from 27.8 to 148 mg/kg.
- Beryllium was detected in 10 soil samples at concentrations ranging from 0.251 to 0.637 mg/kg.
- Cadmium was detected in B-01 and B-15 at a concentration of 1.37 and 0.758 mg/kg, respectively.
- Chromium was detected in all samples at concentrations ranging from 2.06 to 39.4 mg/kg.
- Cobalt was detected in all samples at concentrations ranging from 2.1 to 12.3 mg/kg.
- Copper was detected in all samples at concentrations ranging from 2.95 to 39.1 mg/kg.
- Lead was detected in all samples at concentrations ranging from 0.996 to 18.5 mg/kg.
- Mercury was detected in 11 soil samples at concentrations ranging from 0.0885 to 1.07 mg/kg.
- Molybdenum was detected in B-13 and B-17 at a concentration of 2.04 and 2.68 mg/kg, respectively
- Nickel was detected in all samples at concentrations ranging from 2.11 to 17.1 mg/kg.
- Selenium not reported above analytical method detection limits in any of the 38 samples.
- Silver was detected in one sample from B-08 at 0.5 feet bgs at a concentration of 0.335 mg/kg.
- Thallium was detected in 17 soil samples at concentrations ranging from 0.75 to 1.49 mg/kg.
- Vanadium was detected in all samples at concentrations ranging from 6.45 to 61.1 mg/kg.
- Zinc was detected in all samples at concentrations ranging from 10.2 to 86.3 mg/kg.

Of the 41 primary and duplicate soil samples analyzed for metals, only arsenic was detected above a RSL for industrial land use of 1.6 mg/kg in most samples, however, arsenic concentrations were below the background concentration of 12 mg/kg (Chernoff et al., 2008).

6. LIMITATIONS

This soil and soil gas investigation was conducted by MWH for the benefit of GE. It is based upon a specific scope agreed on between MWH and GE and, therefore, may have limitations, assumptions, and/or rely on information/data which are not obvious on the face of it. Reliance should, therefore, not be made upon this report without further consultation with MWH. The soil and soil gas investigation was limited to the areas of concern identified during the Phase I ESA and/or the locations identified by GE to establish baseline conditions. The information contained in this report reflects MWH's best judgment based on the information available at the time of report preparation, and in part on the interpretation of data from discrete sampling locations that may not represent conditions at unsampled locations. This soil and soil gas investigation was a limited inquiry and additional work would be necessary to identify all potential environmental issues at the Site.

Any interpretations and recommendations given in this report represents the opinions of MWH in accordance with a specific brief and as such does not necessarily address all aspects which may surround the subject area. MWH's liability under this report is limited to its agreement with GE. No liability or duty of care is accepted by MWH with respect to use of this report by any other person. Any reliance placed upon any matters upon which MWH has reported by any person other than GE is done so entirely at their own risk and without recourse to MWH or any of its employees or agents for any loss, damage or expense of whatsoever nature which may be caused by any use they choose to make of this report.

TABLES

TABLE 1
CHRONOLOGY OF SITE INVESTIGATION, REMEDIAL ACTION, AND REGULATORY ACTIVITIES
3003 North Hollywood Way, Burbank, California

1970	TANK REMOVAL: Four to six underground storage tanks (USTs) (Tanks E, F, G, & H) removed from 3003 Hollywood Way, Burbank, CA (Site). (KJC, 1989a)
1983	TANK REMOVAL: Five USTs (Tanks A, B, C, D, & I) removed from the Site. (KJC, 1989a)
1984	SPILL REPORTED: September 23 -- Site reported to Los Angeles Regional Water Quality Control Board (RWQCB) approximately 3,300 gallons of jet fuel accidentally discharged on ground.
1984	INVESTIGATION: Preliminary Contamination Assessment (sample locations C1, D1, L1, R1, A2, E3, F3, G4 collected November 18 & 19) related to the jet fuel discharge. (KJE, 1985a)
1985	INVESTIGATION: Phase II Assessment (vertical and slant sample locations 1, 2, 3, 4, 5, 6, & 7 collected March 18 to 21, 1985) related to the jet fuel discharge. (KJE, 1985b)
1985	REMEDIAL ACTION: Approximately 380 cubic yards (yd ³) of jet fuel-impacted soil was removed from Area 1 to 25 feet below ground surface (bgs) and approximately 600 yd ³ of jet fuel-impacted soil was removed from Area 2 to 30 feet bgs from June 19 to 29, 1985. (KJC, 1989b)
1985	REGULATORY: RWQCB letter to Site noting contaminated soils in Area 1 has been satisfactory completed and no additional work is needed. The letter also noted additional evaluation was needed to determine the vertical extent of soil-impacts in Area 2. (RWQCB, 1985)
1986	INVESTIGATION: Additional Phase III Subsurface Investigation (sample location 8 collected November 19, 1985) to determine vertical extent of soil-impacts in Area 2. (KJE, 1986)
1987	INVESTIGATION: Two groundwater monitoring wells (MW-1 and MW-2) installed in May/June 1987 to evaluate if jet fuel in groundwater in lieu of the RWQCB-requested vadose zone monitoring. (KJC, 1989b)
1989	INVESTIGATION: Two soil sampling locations (SB-17 and SB-18) installed in May/June 1989 to evaluate subsurface impacts near Tank I and near Tanks D, E, F, G, and H, respectively. (KJC, 1989b)
1992	INVESTIGATION: One groundwater monitoring well (MW-3) installed in January 1992 as MW-1 and MW-2 are dry. (KJC, 1992)
1994	REGULATORY: Administrative Order 94-10 was issued to Pacific Airmotive Corporation to perform a partial remedial investigation (RI) at the Site. (USEPA, 1994a)
1994	REGULATORY: U.S. Environmental Protection Agency (USEPA) agrees to exclude the Site from the required partial RI indefinitely, based on the Site's assertions that solvents were not used at the Site. (USEPA, 1994b)
1998	TANK REMOVAL: One UST (Tank 1) and associated piping removed from the Site from September 8 to 10, 1998. Concrete pad for this UST left in place. (AECI, 1998)
1998	AGREEMENT: PAC and Lockheed sign a Settlement Agreement.
1999	REGULATORY: Burbank Fire Department granted No Further Action of the UST (Tank 1). (Burbank Fire Department, 1999)
2003	INVESTIGATION: Asbestos-containing material survey completed on building materials at the Site. (MWH, 2012a)
2005	REGULATORY: USEPA requested quarterly monitoring of MW-3 for four quarters. (USEPA, 2005a and 2005b)
2005	REGULATORY: General Electric (GE) responds to USEPA request for reinstating quarterly sampling at MW-3. GE notes that in January 1999 Lockheed and PAC entered into an agreement that designated PAC as the party primarily responsible for investigation and remediation of soil only and that Lockheed is responsible for groundwater monitoring and reporting (GE, 2005).
2010	REGULATORY: USEPA approved the combination of GE's PAC and Lockheed Martin's BOU Semiannual Groundwater Reports (ARCADIS, 2012).
2011	INVESTIGATION: Lead-based paint survey completed on building materials at the Site (MWH, 2012a)
2011	INVESTIGATION: Phase I ESA with ALTA survey and concrete sampling (MWH, 2012a).

References are included in Section 5.0

**TABLE 2
SITE FEATURE EVALUATION
3003 Hollywood Way, Burbank California**

Site Feature	Location	Constituents of Potential Concern	Description/Status of Feature	Previous Sample Identification	Sample Collection Date	Sample Depth (ft bgs)	Sample Type	Sample Laboratory Analysis	Sample Collection Consultant	Results (From Previous Investigation on Former Facility Features)	Sample Location
Former Tank A	Outside/Parking Lot	JP-4	10,000-Gallon, steel UST that stored JP-4 jet fuel. Installed in 1962/1964, removed in 1983.	None Collected	--	--	--	--	--	--	B-1
Former Tank B		JP-4	2,500-Gallon, steel UST that stored JP-4 jet fuel. Installed in 1962/1964, removed in 1983.	E3	11/18/84	5.3	Grab	Jet Fuel ^a	KJE	Jet Fuel: <1 mg/kg (5.3' bgs)	B-2
Former Tank C		JP-4	10,000-Gallon, steel UST that stored Avgas. Installed in 1962/1964, removed in 1983.	None Collected	--	--	--	--	--	--	B-3
Former Tank D		Aviation Gasoline	7,500-Gallon, steel UST that stored Avgas. Installed in 1947/1948, confirmed removed via Burbank Fire Department Permit on November 8, 1976.	None Collected	--	--	--	--	--	--	B-4
Former Tank E		Aviation Gasoline	1,000-Gallon, steel UST that stored Avgas. Installed in 1947/1948, confirmed removed via Burbank Fire Department Permit on November 8, 1976.	None Collected	--	--	--	--	--	--	B-5
Former Tank F		Aviation Gasoline	4,000-Gallon, steel UST that stored Avgas. Installed in 1947/1948, confirmed removed via Burbank Fire Department Permit on November 8, 1976.	None Collected	--	--	--	--	--	--	B-6
Former Tank G		Aviation Gasoline	4,000-Gallon, steel UST that stored Avgas. Installed in 1947/1948, confirmed removed via Burbank Fire Department Permit on November 8, 1976.	None Collected	--	--	--	--	--	--	
Former Tank H		Aviation Gasoline	10,000-Gallon, steel UST that stored Avgas. Installed in 1947/1948, confirmed removed via Burbank Fire Department Permit on November 8, 1976.	SB-18	May/June 1989	5, 10, 20, 30, 40, & 50	Soil (vertical boring)	Hydrocarbons ^b Toluene 8020	KJC	Hydrocarbons: ND Toluene: 0.034 mg/kg (5' bgs), 0.016 mg/kg (10' bgs), 0.002 mg/kg (20' bgs), 0.003 mg/kg (30' bgs), 0.009 mg/kg (40' bgs), 0.004 mg/kg (50' bgs)	SG-18 B-7
Former Tank I		Waste Oil	500-Gallon, steel UST that stored waste oil. Installed in 1947/1948, removed in 1983. Identified on a plot plan showing new Tank 1.	SB-17	May/June 1989	7.5, 10, 20, 30, & 40	Soil (vertical boring)	VOC 8240 Hydrocarbons ^b Toluene 8020	KJC	VOCs: ND Hydrocarbons: ND Toluene: 0.062 mg/kg (7.5' bgs), 0.006 mg/kg (10' bgs), 0.009 mg/kg (20' bgs), 0.007 mg/kg (30' bgs), 0.027 mg/kg (40' bgs)	B-8
Former Tank 1		Jet Fuel A & Natural Gas	20,000-Gallon, steel UST that stored jet fuel A & natural gas. Installed in 1979/1980, removed in 1998. Concrete tank pad left in-place because of concern arising from a older 6-inch high pressure fire suppression water line might break. Imported backfill material may contain contained crushed misc base.	915-1A (east wall) 915-1B (west wall) 915-1C (northwest wall) 915-1D (south wall) 915-1E (northeast wall)	09/15/98	12	Grab	Jet Fuel 8015 TRPH 418.1 BTEX 8020 MTBE 8020 Lead 6010	AECI	Jet Fuel: ND TRPH: Max was 370 mg/kg in east wall sample BTEX: ND MTBE: Max was 0.013 mg/kg in northwest wall sample Lead: ND	B-9 B-10
				912-1A 912-1B 912-1C	09/15/98	Stockpiles	Grab	Jet Fuel 8015 TRPH 418.1 BTEX 8020 MTBE 8020 Lead 6010	AECI	Jet Fuel: ND TRPH: Max was 410 mg/kg BTEX: ND MTBE: ND Lead: Max was 5.5 mg/kg	
Potential Former Tank X		Jet Fuel	Unconfirmed 20,000-Gallon UST that was identified on a 05/02/62 Plot Plan.	F3	11/18/84	2.8	Grab	Jet Fuel ^a	KJE	Jet Fuel: Not Analyzed	B-11
Potential Former Tank Y		JP-4	Unconfirmed 10,000-Gallon UST that was identified on a 05/02/62 Plot Plan.	2	03/18/85	11, 21, & 41	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: <1 mg/kg (11', 21', & 41' bgs)	B-12
Potential Former Tank Z		JP-4	Unconfirmed 2,500-Gallon UST that was identified on a 05/02/62 Plot Plan.	4	03/18/85	16, 21, & 26	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: <1 mg/kg (16', 21', & 26' bgs)	B-13
Potential Former Clarifier	Unknown	Unconfirmed clarifier identified on a plot plan that showed Former Tank 1	None Collected	--	--	--	--	--	--	SG-13	
Burmed Tank Compound	Diesel & JP-4	Area that housed one Diesel AST, one JP-4 AST, and a Natural Gas Booster on the compound	None Collected	--	--	--	--	--	--	--	

TABLE 2
SITE FEATURE EVALUATION
3003 Hollywood Way, Burbank California

Site Feature	Location	Constituents of Potential Concern	Description/Status of Feature	Previous Sample Identification	Sample Collection Date	Sample Depth (ft bgs)	Sample Type	Sample Laboratory Analysis	Sample Collection Consultant	Results (From Previous Investigation on Former Facility Features)	Sample Location				
Former Fuel Pump House	Outside/Parking Lot	Unknown	Unconfirmed materials were used and unknown when feature was removed.	7	03/18/85	5.5, 15, 19.5, 24.5, 29, & 34	Soil (slant boring)	Jet Fuel ^a	KJE	Jet Fuel: 3,700 mg/kg (5.5' bgs), 480 mg/kg (15' bgs), 610 mg/kg (19.5' bgs), 1,900 mg/kg (24.5' bgs), 7 mg/kg (29' bgs), <1 mg/kg (34' bgs)	B-14				
				GS-1		5.5	Soil (slant boring)	Jet Fuel ^a	KJE	Jet Fuel: 790 mg/kg (5.5' bgs)					
Former Fuel Pumps		Hydrocarbons	Unconfirmed materials were used and unknown when this 8' x 20' feature was removed.	None Collected	--	--	--	--	--	--	B-15				
Former Fuel Pump Pit		Hydrocarbons	Unconfirmed materials were used and unknown when feature was removed.	None Collected	--	--	--	--	--	--	SG-14				
Clarifiers		Hydrocarbons	Two coated concrete clarifiers that are 6-feet deep and 4-feet wide. Clarifiers were tested quarterly.	None Collected	--	--	--	--	--	--	SG-15				
Former Sump		Hydrocarbons	Unconfirmed materials were used and unknown when feature was removed.	None Collected	--	--	--	--	--	--					
Sumps		Unknown	Two 2' x 2' concrete sumps	None Collected	--	--	--	--	--	--	SG-7				
Cooling Tower Sump w/Concrete Berm		Unknown		3.5' x 3.5' x 3.5' Concrete cooling tower sump with a concrete berm in shed	5	03/18/85	5.5, 10.5, 15, 19.5, 24.5, 29 & 38.5	Soil (slant boring)	Jet Fuel ^a	KJE	Jet Fuel: 2,800 mg/kg (5.5' bgs), 400 mg/kg (10.5' bgs), 25 mg/kg (15' bgs), 63 mg/kg (19.5' bgs), <1 mg/kg (24.5' & 38.5' bgs)	SG-8			
					R1	11/18/84	3.5, 6.0, & 9.0	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 250 mg/kg (3.5' bgs), <1 mg/kg (9.0' bgs)				
Former Area 1 Spill Area		Jet Fuel		~20' x 20' Area where an accidental discharge occurred due to fuel supply line. Approximately 380 cubic yards of jet fuel-impacted soil was removed to 25 feet bgs from June 19 to 29, 1985. Steel sheet pilings likely left in place on North and East walls.	G4	11/18/84	3.0, 5.3, 6.7, 9.1 and 12.5	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 17,000 mg/kg (6.7' bgs), 18,000 mg/kg (9.1' bgs), 10,000 mg/kg (12.5' bgs)	--			
					1	03/18/85	16, 21, 26, 31, & 36	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 480 mg/kg (16' bgs), 3,600 mg/kg (21' bgs), <1 mg/kg (26', 31', & 36' bgs)				
					3	03/18/85	6, 11, 16, 21, 23.5, 26, 31, & 36	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 59 mg/kg (16' bgs), 2,400 mg/kg (21' bgs), 19 mg/kg (23.5' bgs), <1 mg/kg (11', 26', & 31' bgs)				
	1-1 1-2 1-3 1-4 1-5 1-6 1-7 1-8 1-9				06/29/85	26'	Grab (Excavation Bottom)	Jet Fuel ^a	KJE	Jet Fuel: 17 mg/kg 10 18 17 13 200 75 140 <5					
	A2				11/18/84	3.5 & 6.0	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 2 mg/kg (6.0' bgs)					
	C1				11/18/84	3.5, 6.1, & 9.2	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 9,300 mg/kg (3.5' bgs), 21,000 mg/kg (9.2' bgs)					
Former Area 2 Spill Area	Jet Fuel		18' x 30' Area where an accidental discharge occurred due to fuel supply line. Approximately 600 cubic yards of jet fuel-impacted soil was removed to 30 feet bgs from June 19 to 29, 1985. A concrete cap may have been placed at bottom of this excavation. Steel sheet pilings likely left in place on North and West walls.	D1	11/18/84	3.3, 6.1, & 9.0	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 40,000 mg/kg (6.1' bgs), <1 mg/kg (9.0' bgs)	--				
				L1	11/18/84	3.3, 6.0, & 9.0	Soil (vertical boring)	Jet Fuel ^a	KJE	Jet Fuel: 1 mg/kg (3.3' bgs), <1 mg/kg (6.0 & 9.0' bgs)					
				6	03/18/85	5.5, 10.5, 15, 19.5, & 24.5	Soil (slant boring)	Jet Fuel ^a	KJE	Jet Fuel: 13 mg/kg (15' bgs), 10 mg/kg (24' bgs), <1 mg/kg (5.5', 10.5', & 19.5' bgs)					
				2-1 2-2 2-3 2-4 2-5 2-6 2-7 2-8 2-9 2-10 2-11 2-12	06/29/85	31 31 31 31 31 31 31 31 31 32 32 30	Grab (Excavation Bottom)	Jet Fuel ^a	KJE	Jet Fuel: 8 mg/kg <5 <5 180 1,400 <5 <5 10,300 6,100 8,200 4 <1					
				8	11/19/85	35, 45, 55, 65, 75, 80, & 83.3	Soil (vertical boring)	Jet Fuel ^a	KJC	Jet Fuel: 13,000 mg/kg (35' bgs), 8,200 mg/kg (45' bgs), 7,800 mg/kg (55' bgs), 10,000 mg/kg (65' bgs), <1 mg/kg (75', 80', & 83.3' bgs)					
				Storm Drains	Unknown	Two separate storm drains in the parking lot area	None Collected	--	--	--		--	--	--	SG-12 SG-19

**TABLE 2
SITE FEATURE EVALUATION
3003 Hollywood Way, Burbank California**

Site Feature	Location	Constituents of Potential Concern	Description/Status of Feature	Previous Sample Identification	Sample Collection Date	Sample Depth (ft bgs)	Sample Type	Sample Laboratory Analysis	Sample Collection Consultant	Results (From Previous Investigation on Former Facility Features)	Sample Location
Storage/Office Room	Test Cell Nos. 1-4 Building	Unknown	Area that was used for parts storage and an office	None Collected	--	--	--	--	--	--	SG-16
Test Cell No. 1		Jet Fuel/Hydrocarbons	Typical engine testing room.	None Collected	--	--	--	--	--	--	--
Exhaust/Gravel Area		Unknown	Area with a concrete pad that may have stored equipment. Area was the exhaust area for the Test Cell No. 1 engine testing activities.	None Collected	--	--	--	--	--	--	--
Engine Prep Room #1		Unknown	Area that preped engines. Also has a 1' x 1' x 1' concrete floor drain.	None Collected	--	--	--	--	--	--	SG-9
Control Room #1		None	Area that housed electronic equipment to monitor engine testing for both Test Cell No. 1 & 2.	None Collected	--	--	--	--	--	--	--
Storage Room #1		None	Unknown room details.	None Collected	--	--	--	--	--	--	--
Loading Dock		Unknown	Unknown room details.	None Collected	--	--	--	--	--	--	SG-1 SG-2
Test Cell No. 2		Jet Fuel/Hydrocarbons	Typical engine testing room with an exhaust area. Also has a 1' round concrete drain.	None Collected	--	--	--	--	--	--	SG-6
Test Cell No. 3		Jet Fuel/Hydrocarbons	Engine testing room	None Collected	--	--	--	--	--	--	--
Engine Prep Room #2		Unknown	Area that preped engines. Also has a 1' x 1' x 1' concrete floor drain.	None Collected	--	--	--	--	--	--	--
Control Room #2		None	Area that housed electronic equipment to monitor engine testing for both Test Cell No. 3 & 4.	None Collected	--	--	--	--	--	--	--
Storage Room #2		None	Unknown room details.	None Collected	--	--	--	--	--	--	--
Test Cell No. 4		Jet Fuel/Hydrocarbons	Engine testing room with 1' wide x 1' deep concrete trench	None Collected	--	--	--	--	--	--	SG-10
Air Compressor/Water Tank/Air Tank		Hydrocarbons	Aboveground air compressor on gravel area with some oil staining on equipment. Water and air tanks are aboveground and on gravel area.	None Collected	--	--	--	--	--	--	--
Test Cell No. 5	Test Cell No. 5 Building	Jet Fuel/Hydrocarbons	Typical engine testing room with exhaust area. Also has three 1' wide x 1' deep concrete trenches and one 1' x 1' x 1' concrete floor drain	None Collected	--	--	--	--	--	--	SG-3 SG-5 SG-4
Test Cell No. 5 Control Room		None	Area that housed electronic equipment to monitor engine testing for Test Cell No. 5. Also had an associated storage room.	None Collected	--	--	--	--	--	--	--
Fuel Pump Room		Hydrocarbons	Room with fuel pumps associated with Test Cell No. 5.	None Collected	--	--	--	--	--	--	B-17

Notes:
 AST - Aboveground Storage Tank
 BTEX - Benzene, Toluene, Ethylbenzene, and Xylenes
 ft bgs - Feet below ground surface
 KJC - Kennedy/Jenks/Chilton
 KJE - Kennedy/Jenks Engineers
 mg/kg - Milligrams per kilogram
 MTBE - Methyl Tert Butyl Ether
 ND - Not Detected
 TRPH - Total Recoverable Petroleum Hydrocarbons
 UST - Underground Storage Tank
 VOC - Volatile Organic Compounds

^aGas chromatography scan using flame ionization detection (GC/FID)
^bGas chromatography utilizing commercial hydrocarbons as standards

CHHSL:				0.6	--	--

Notes:

Samples analyzed using U.S. Environmental Protection Agency Method 8260B-Volatile Organics by GC/MS + Oxygenates/Total Petroleum Hydrocarbons
Results shown reflect constituents that were detected above the practical quantitation limit in at least one sample

DUP - Duplicate sample listed immediately below the primary sample

CHHSLs - California Human Health Screening Levels (OEHHA, 2010)

ft bgs - Feet below ground surface

GC/MS - Gas Chromatograph/Mass Spectrometry

µg/L - Micrograms per liter

TPH - Total petroleum hydrocarbons

< - Not detected above the practical quantitation limit shown

-- - No established standard

Introduction

On July 18, 2012, Spectrum Geophysics conducted a geophysical investigation at The Former Pacific Airmotive site located at 3003 North Hollywood Way in Burbank, California. The purpose of the investigation was to delineate the surface trace of detectable steel underground storage tanks (USTs).

The area of investigation, as designated by Joan Dolmat of MWH Americas, was an irregular shaped mostly asphalt lot which measured approximately 110 by 190 feet.

Site interferences included a steel trash bin, chain link fencing, vault lids, reinforced buildings, utility risers, and reinforced concrete.

Methods

The equipment used in this investigation consisted of a Geonics EM-61 high-sensitivity metal detector, a shallow-focus metal detector (M-scope), a Sensors and Software Noggin Smart Cart ground penetrating radar (GPR) unit coupled to a 500-MHz antenna, and electromagnetic (EM) utility-locating equipment.

EM-61 High Sensitivity Metal Detector

The EM-61 high-sensitivity metal detector was used in an effort to delineate areas where metallic objects (such as USTs, metal debris, and conduits) may be buried. The EM-61 transmitter generates short pulses of electromagnetic energy that travel downward and outward and have a primary field associated with them. This energy becomes "trapped" in conductive materials and causes a secondary magnetic field to be generated in these materials. Between pulses, the receiver measures the voltage of the decay of this secondary magnetic field that is proportional to the conductivity of the subsurface materials.

During this investigation, EM-61 voltage readings were recorded and stored in a digital polycorder at 2.5-foot intervals along east-west lines spaced 2.5 feet apart within an established grid. These data were processed in the field and used to generate contour maps to assist in identifying anomalous areas that may be caused by buried metallic features.

Top *or* bottom coil data can be useful for identifying near-surface metallic objects; although, the top coil generally has a larger response than the bottom coil to deeply buried objects. The differential data (top coil data minus the bottom coil data) was used in this survey to distinguish deeper targets such as steel USTs and reinforced concrete footings from shallow ones such as a vault lid or scrap metal. Utilization of the differential data allows for the suppression of near surface targets that might mask the response from deeper targets of interest.

Electromagnetic (EM) Utility Location

Passive and active EM utility-locating methods were used in an effort to identify possible sources of EM-61 anomalies and to delineate the surface trace of detectable underground utilities and abandoned piping.

Passive locating is possible when electrically conductive conduits are energized by ambient radio frequencies (RF) that are often produced by 50/60 cycle electrical, radio, audio, television, and communication transmissions. A receiver tuned to these frequencies can be used to locate the re-radiated signal emitted by the conductor (i.e., conduit).

Active locating is initiated by conducting an EM signal at a known frequency (8 and 33 kHz for this site) on a conduit exposed at the surface. A receiver, tuned to these frequencies, is then used to locate the signal maxima (or surface trace) of the applied signal.

Ground Penetrating Radar (GPR)

Ground Penetrating Radar (GPR) was used to further investigate anomalies identified on the EM-61 contour map. A Sensors and Software Noggin Smart Cart ground penetrating radar system was utilized in conjunction with a 500 MHz antenna.

During the GPR survey, a high-frequency radio signal is transmitted into the ground via the antenna. As radio waves propagate into the ground, these signals are reflected off structures with differing electrical properties. These

GPR Data Collection

reflected signals are then captured by the receiver and are presented as vertical profiles on the GPR unit.

GPR data were collected at 2.5 foot spaced transects along the previously established grid allowing sufficient room for the GPR cart to be aligned over the start and ending points of the data collection grid at the east and west ends of the transects. The data were reviewed for signatures that might indicate a possible source of the EM-61 anomalies.
